**TO ALL BOOKSELLERS AND BOOKBUYERS.**

**NOTICE.**—The following CATALOGUES of Messrs. CASSELL, PETER, & GALPIN'S PUBLICATIONS are now ready, and may be procured from every Book Store:—

1.—CASSELL'S EDUCATIONAL CATALOGUE, containing a List of Works suitable for all classes of Schools, including these Books which have been adopted by School Boards in England and in the Colonies, as well as by other Educational bodies.

\* This List also supplies information as to CASSELL, PETER, & GALPIN'S specialities in the way of Material for School use—such as—

Colour Boxes,  
Mathematical Instruments

Microscopes,  
Drawing Instruments, &c.

2.—CASSELL'S COMPLETE CATALOGUE, containing a List of the following Works issued by CASSELL, PETER, & GALPIN:—

Fine Art Volumes,  
Children's Books,  
Educational Works,  
Serial Publications,  
Dictionaries,  
Religious Literature,

Bibles,  
History,  
Natural History,  
Poetry, Travel,  
Hand-books; and  
Miscellaneous.

3.—CASSELL'S CLASSIFIED LIST OF BOOKS, containing a complete List of CASSELL, PETER, & GALPIN'S Publications, classified according to their value, from 6d. up to Twenty Pounds.

\* Copies of the above Catalogues can be obtained on application at the Office of the "China Mail," Hongkong.

**FOR SALE.—ELECTROTYPES OF WOOD ENGRAVINGS,** to the number of 70,000. Full particulars on application to CASSELL, PETER, & GALPIN, Ludgate Hill, London.

CASSELL, PETER, & GALPIN, LONDON, PARIS, AND NEW YORK.  
27th September, 1873.

## BIRTHS.

On the 31st October, the wife of C. R. SIMPSON, Esq., of a son.

## DEATH.

At the Yokohama General Hospital, on the 27th instant, WILLIAM HARDING, third Assistant-Engineer of the P. M. S. S. *Alaska*, of small-pox.

## Notes of the Week.

### THE CHANGES IN THE CABINET.

We furnished our readers on the 27th ultimo with a list of the changes in the Cabinet which were accepted by good authority as those which had been made. The list, however, requires some modification, but we believe we are correct in giving the following as the actual results of the arrangements last Saturday evening.

SANJIO, (Daijō daijin), remains Prime Minister until his restoration to health, but will meanwhile be represented in his duties by IWAKURA (Udaijin,) late Chief of the Embassy.

OKUMA, (Hizen)	} Remain Sangi, or Councillors of State; the first as Minister for Finance, the third as Minister for Education.
OKUBO, (Satsuma)	
OKI, (Hizen)	

TERASHIMA, (Satsuma) becomes Sangi and Minister for Foreign Affairs in place of Soyōjima.

ITÔ SHUNSKI, (Chosiu) becomes Sangi and Minister for Public Works.

KATSU, (Tokugawa) becomes Sangi and Minister of Marine.

SAIGO KICHINOSUKE, remains Commander in Chief of the Army, but will be absent from the Capital for a short period.

SANJIO, therefore, remains Daijō daijin or First Minister of State.

The post of Sadaijin, Second Minister of State, is unfilled. IWAKURA takes the post of Third Councillor of State, but acts temporarily for SANJIO.

THE ferment of which the changes in the Cabinet have been alternately cause and effect has formed the principal theme of the gossip of the week. It seemed at first as if a violent disruption of the Cabinet had taken place, and when it was known that this, or what appeared like it, had grown out of a question which was never previously believed to be of any serious import, much surprise was expressed. The question referred to is that of the relations between this country and Corea, which of late years, and especially since the visits and repulses of the French and American squadrons, have unquestionably been in an unsatisfactory state.

Some months ago the *Japan Gazette* published the translation of a despatch said to have been recently addressed by the Korean to the Japanese Government, and written in terms of no common discourtesy, declaratory of its intention to refuse in future the annual tribute which had marked its dependent relations to Japan, and desiring the Japanese, if they would still have it, to come and try to collect it.

There were many excellent reasons for doubting the authenticity of this despatch of which a careful analysis appeared in the *Japan Mail*, together with an account of the relations existing between the two countries and the manner in which they were conducted. But it should be allowed that

the *Japan Gazette* was right in this matter in spite of the extravagances of last week—the 40,000 men &c. The Government, however, at the time strenuously denied the authenticity of the despatch and addressed the journal which published it a communication to that effect. But recent events prove conclusively that the relations which formerly subsisted between the two countries are destroyed, and, unless the national feeling should be so roused by the decision of the Cabinet as to reverse its policy and force the Government into active coercive measures, Corea will henceforward cease to acknowledge any tributary relations to this country.

In view of the geographical positions of the two countries and the extremely arbitrary nature of the connection which existed between them, the enormous expense which the renewal of it would entail, not to mention the risk attending the attempt—which, however, should not be underrated—the decision of the Cabinet must be regarded as prudent. It is needless to say that foreigners would see with grave alarm and dissatisfaction the outbreak of a war which would rapidly consume the resources of a country only now slowly recovering from the prostration caused by its own internal Revolution. Such a war would make demands on Japan not only paralysing to its trade, but destructive of all its efforts in the direction of progress. But these feelings might, and doubtless would to some extent, be waived, if it were felt that Corea were any integral portion of the Empire, the severance from which was not only deeply galling to the national pride, but injurious to the national interests. But it is not so. So long as Corea was content to acknowledge the supremacy of Japan, which had been asserted by two conquests, and maintained up to this time, possibly without remonstrance on the one side or expensive measures necessary to preserve it on the other, the connection between the two countries was a source of pride to the Japanese; though it made no addition to their revenue. But the humour of the Koreans has undergone a change of late, and has taken the form of an absolute refusal to hold communication with the outer world, and a determination to exist for itself alone. It is inconceivable that such entire isolation as this can long be preserved, however long it may be attempted, in the present state of the world. The temper which dictates it as a policy is viewed with a gradually increasing disfavour by the nations who have the power to thwart it, and though aggressive measures of a violent kind would find no justification in the conscience of Europe or America, the lapse of a few years may be relied on to bring about some incident which will induce the various civilized powers of the West to contest the right of any nation to monopolize for its exclusive benefit productions which would seem to have been intended for beneficial exchange among the various families of the Earth.

The temper of the military class is said to have been violently aroused by the decision of the Cabinet, and there are mutterings of a displeasure which might easily assume a formidable shape, the more so, as it appears to us, on account of the absence of that protecting and sheltering power to the Throne afforded by the existence of a powerful aristocracy such as the Japanese formerly possessed, not indeed in the persons of those who represented the great families, but in the institution of aristocracy with which the existence of those persons was bound up. The minds of the Japanese have been so thoroughly shaken during the past ten years

their institutions have undergone such vast changes, their beliefs have become so unsettled, and the policy of their Government has been so novel, that any crisis like the present cannot be viewed without serious alarm.

The Meeting of the Chamber of Commerce held on Thursday afternoon was signalized by the adoption of a very carefully drawn up resolution of Mr. Jaquemot's on the subject of the arbitrary proceedings of the *Kaisha*, or Silk Guild, which in the words of the resolution were held to constitute an infraction of article XIV of the Treaty. The resolution is a good one in as far as it intended to strike at the power of the Guild, which is often arbitrarily exercised. But if Mr. Kingdon was correct in saying that silk was sometimes packed in bales of 37 or 40 lbs. and an allowance of 1 lb. per bale was then required—an allowance wholly preposterous and unjust—we strongly suspect that the late move of the silk guild has been at least protective, if not retaliatory, in its origin. We are also much with Mr. Kingdon in thinking that allowances for loss of weight in transit must be made an element in the calculation of cost and not a claim for allowance on this side. It is a quantity which does not vary much, and this method of adjusting it is probably the simplest. It is curious, however, that he should have suggested anything so entirely impractical as that the amount of the allowance should be left open for settlement until the account sales was sent from the place of destination and sale. But Mr. Jaquemot deserves the thanks of the mercantile community for the tenacity with which he maintains his attacks on the Silk Guild, the arbitrary proceedings and somewhat arrogant conduct of which might easily have taken even a more pronounced form but for Mr. Jaquemot's persistent antagonism to it. The Chamber has wisely removed the whole question from that of tare or allowances or usages, and now contests the right of the *Kaisha* to issue any rules or regulations which have the effect of interposing bars between the silk producers and the foreign buyer in contravention of the clear stipulations of the Treaties.

We regret to learn that the P. M. S. S. *Ariel* which sailed from Yokohama, bound for Hakodate, on the 26th instant, at 9 o'clock was, 24 hours later, stranded on a rock at a point on the coast some four miles to the N. E. of Toyama. The passengers and crew were safely landed, and at daylight the *Ariel* slipped from the rock and sank in deep water, the head of her mainmast alone being visible. Captain Newell speaks of the attention shown by the country people to the shipwrecked crew and passengers. All will return to Yokohama overland and may be expected to arrive to-day. The *Ariel*, though an old vessel, was in excellent condition and in favourable repute. Originally engaged in the Atlantic trade on the Liverpool, Southampton and Bremen lines she made excellent passages across the "herring-pond" and earned a high reputation by her performances. She came into the possession of the P. M. S. S. Co. towards the close of the American War and has for some three years past been engaged in the Shanghai and Hakodate carrying trades. We need scarcely add that the Company are their own insurers, and that the loss of the *Ariel* will fall exclusively upon their insurance fund.

In an article published on Wednesday evening last the *Japan Gazette* states that "there is throughout the country a very strong feeling towards republicanism; and though the monarchists may be numerically stronger than the republicans, the latter are the most energetic."

We shall not waste time in confuting this statement, but as it is calculated to do a great deal of injury to the prospects of this country in the minds of all thoughtful students of its history and well-wishers of its progress, we may stake such credit as this Journal possesses as a fairly correct authority upon Japanese questions, on an unqualified contradiction of the statement in question, which is, in our opinion, most pernicious, most misleading and most unwarranted.

In this country every one has an opportunity of estimating the value of the opinions expressed by a journal, but people

at a distance cannot be supposed to do this, and it is for them that we now write these few words.

A FATAL case of small-pox occurred on the *Alaska* on her voyage to this port from San Francisco.

Two Europeans and one Chinaman who were suffering from the disease were brought ashore on the afternoon of the 26th instant, and were transferred to the Hospital, where one of the Europeans died on the following day.

The report of the Master of the S.S. *Maud* that the Welsh coal which he took on board in London was inadequate to generate steam sufficient to propel his vessel at more than half speed on her voyage hither from Kobe, points to the possibility of some fraud having been perpetrated. The character of the Powell-Duffryn coal is too well known to permit of any doubt as to its efficiency, while the high price it has recently reached, and the fact that the coal in question was shipped in London, favour the view that either an inferior product was supplied as first-class Welsh coal, or that a serious blunder has been made by the persons employed to provide the vessel with fuel. It is to be hoped that, in either case, the matter will be strictly enquired into.

The Anglo Saxon race prides itself upon its faculty of not knowing when it is beaten, a faculty to which it is said to owe some of its victories and most of its successes. The action of some members of our racing circle, who are not believed to have achieved a prominent success at the last meeting, helps to verify this. If we may believe current talk, defeat will be made a key to success and the Tartan Stable must look to its laurels. The public cannot fail to gain by the contest, and a new element of uncertainty will help to give a fillip to "book-making."

A CORRESPONDENT of the *Hiogo News* furnishes conclusive evidence that the English school-master is not abroad in Ōzaka official circles:—

The trees cutting, birds and beasts killing and cows and horses setting in free at the ground belonging to Government are prohibited.

OSAKA FU.

This, it is added, appears on an inscription near the Pagoda of Tennoji.

Number of Passengers 27,691      Amount \$9,209.52

We have received a piece of information from a Japanese source, which, if true, will affect Kobe and Hiogo to a considerable extent. We have heard that it is the intention of the Government to establish a barrack either in Hiogo or in some village not far to the Westward. We are glad of this, inasmuch as disciplined protection of Hiogo and Kobe is a very good thing, but we hope that if the barrack is established as suggested, care will be taken that the soldiers will be kept, at any rate, so much in order that our protectors may not become a nuisance.—*Hiogo News*.

## THE CHANGES IN THE CABINET.

THE chief feature of the Ministerial Changes to which we referred in our last issue as impending, and which have meanwhile taken place, is the transfer of the portfolio of Foreign Affairs from the hands of SOYEJIMA to those of TERASHIMA, late Minister at the Court of St. James's. The PRIME MINISTER still retains his office, though during his temporary indisposition IWAKURA will discharge its duties; OKUMA, whose weight in the Imperial Councils has long borne a just proportion to his undoubted administrative ability, and who could ill have been spared, remains a Councillor of State; KIDO, one of the most distinguished members of the Embassy, and a man of high courage and unquestionable breadth of view, though at this moment seriously ill, takes his place among the Sangi in company with OKUBO, ITÔ SHUNSEI and KATSU, and two or three retirements of more or less note mark the divergence of opinion between the Cabinet in its old form and as at present reconstructed.

The conflict of opinion upon the question which divided the Cabinet is said to have been sharp and well sustained, and we shall not be deterred by the silly indecorum which has characterized the writing of the *Japan Gazette* on the subject from acknowledging frankly that the Korean question caused this division, and that, in all probability, the information it gave to the world some months ago on this subject was correct. The Korean question has undoubtedly proved to be one of some real gravity, and to blame the *Gazette* for treating it after its own manner would be to arraign the wisdom of nature which has created nothing without a purpose, and to impugn the wisdom of the potter who equally designs vessels to honour and dishonour.

And now that the question has been settled, at least for the present, in the only manner justified by the existing condition of the country, Japan must be satisfied with the decision at which her statesmen have arrived. It can not be agreeable for an old state to receive an insulting message from a tributary, however barbarous, which it had invaded successfully, and subjugated. The traditions of the victorious expedition of A. D. 200 under JINGO-KOGU must still linger in the national mind, and feed the national pride, nor can the successes under HIDEYOSHI, turned though they subsequently were to disastrous failure, be without their effect upon the *samurai* class at this moment. But the vanity which prompted this latter expedition received a check which was not without its lessons—lessons which may fairly be laid to heart at this moment. The coercion of Korea could never have been otherwise than a vain-glorious exhibition of the military spirit of the Empire, and its punishment at this moment for a truculent assertion of its independence would involve Japan in a war of uncertain termination, and of a cost altogether out of proportion to her present resources and obligations. Japan would be a doubtful gainer in the good opinion the world has formed of her, if, at the time of her new birth, and while struggling with difficulties which demand all her attention at home, she were to permit herself to be goaded into a war not absolutely demanded by her honour, distinctly forbidden by her interests, of indefinite prolongation and most uncertain issue. Korea is not only not necessary to Japan, it could only be a source of burden and perplexity to her. We have no wish to depreciate the value of a legitimate national pride which, like its parallel in individuals, is the foundation of many virtues and the source of much lofty endeavour. But the annoyance caused by the taunts of a nation of very

slightly civilized men, isolated from the world and profoundly ignorant of it, and despising alike the blessings of increased knowledge and the title to admission into the comity of nations, need not and should not divert the Japanese from the pursuit of the very different course they have themselves taken. Circumstances are conceivable under which Japan, even at this moment, might not only be justified but be forced into going to war with Korea. The capture and ill-treatment of any of the MIKADO's subjects, descends upon the coast of Japan, or the threat of invasion, would and should be replied to by a people of spirit—and this the Japanese have certainly never wanted—with a readily obeyed call to war. But we cannot think that any circumstances known to foreigners—admitting that foreigners have been made acquainted with the actual causes of the ill-blood existing between the two nations—would warrant Japan at this moment in such a step. The insolence of the Koreans is that of barbarians, and the welfare, happiness and progress of the millions of Japan ought hardly to be risked for the chastisement of this. It will not be supposed by sensible observers outside that the peace party which has prevailed in the recent debates on this subject are less solicitous in regard to the national feelings or jealous of the national honour and interests than the fire-eaters who talk of landing 40,000 men on the Korean coast, as if this could be effected by the stroke of a pen or the waving of a wand. The day will come when the civilized world will demand the opening of Korea, and do so under circumstances which will obviate all necessity for bloodshed and preclude all possibility of denial. In this demand Japan may fairly claim to take part, and meanwhile she has acted wisely in repressing passions and ambitions which could not be indulged in without the infliction of vast evils upon her people, and possibly an indefinite retardation of her progress. It is idle under circumstances of this nature to bandy about common places which might indeed be applicable to a street-fight, but which have no relation to the complex responsibilities of a nation, and especially of a nation just awakening to a new phase of national life and weighted with hitherto undreamt of relations. It is the struggle for a higher national existence, a worthier place in the comity of nations than she has before attained, which at present animates this country, and those with whom she is entering into these new relations will be more than satisfied at the wisdom of the decision of which the changes in the Cabinet are the formal expression.

And now that this question has been settled, a question which we strongly suspect has occupied, we might almost have said absorbed, the attention of the Cabinet since the return of the Embassy, is it too much to expect that the more pressing arrears of business in which foreigners are interested, and which, if common report speaks truly, have been lamentably neglected of late, should once more receive their fair share of attention? May we not expect from the Cabinet which has arrived at this decision—one which from its very nature implies a serious and progressive home policy, rather than a showy external policy—a full and liberal consideration of all those questions on which the freedom and development of the internal and external trade of the country depend, and in which foreigners have an equal, though no greater, interest than the Japanese themselves. The continuance and solidification in the minds of foreigners of the dissatisfaction at present existing among them in regard to such questions, is greatly to be deprecated, and while we are totally opposed to the party who think that no-

thing that Japan is doing or has done has claims on the approval or admiration of the world, it would be better if there were a more accurate relation between the compliments which are paid her and the foundations on which they actually rest. Everything may be hoped for for this country if it pursues a wise, deliberate and solid internal policy, guided, at least in commercial matters, by the example of those nations whose adoption of sound economical theories has increased their power and wealth in equal ratios; whilst nothing but weakness, disappointment, and possibly even more serious trouble still, must be apprehended if no actual material advantages accrue to the people from a line of policy which has many of the irritating effects of novelty, and the remote aim of which can only be obscurely, if at all, apprehended by them.

#### TRADE REFORM.

IF all idea of securing the combination of foreigners in commercial matters against the combinations of Japanese must be given up—and it certainly would appear to be the truer wisdom to recognize the fact—what should be the endeavour of foreigners and the nature of those efforts by which they must seek to counteract the policy of their opponents? This question seems to us susceptible but of one answer, viz: The destruction of the guilds, whose machinations are as irritating to the foreigner as they are opposed to the true interests and the vigorous development of trade.

But how is this to be effected?

The Government will undoubtedly refuse, and possibly would hardly dare, to take any direct steps to abolish these Corporations, which are strong and for the perpetuation of which many plausible and even cogent arguments might be adduced. It undoubtedly uses them for its own purposes, some of which may be legitimate enough, though others are far more open to criticism; they have strong claims on their members, based on the recollection of support afforded at times when the absence or withdrawal of it would have just made the difference between a handsome profit and a serious loss; and they have been among all nations in the earlier history of their commercial development, the natural machinery by means of which the weakness of isolation or disunion has been counteracted for the common good. It would thus be utterly visionary to expect that they will either disperse of themselves, or be dispersed by actual enactment of the Government.

But is it too much to hope that the Government may be brought to see the hindrances which these guilds present to the development of trade, and thus to agree, at the approaching revision of the treaties, to extend to foreigners facilities for the transaction of business in the interior which they do not now possess? Why should not the Representatives of the Treaty Powers press for the acceptance of the Japanese Government a clause in the amended treaties enabling foreigners to go or send money into the interior with the object of buying directly from the tea and silk producers? That, under certain properly devised restrictions, Japan will be opened to the merchant and the traveller, seems to be universally agreed. Surely, under these circumstances, the merchant will be able to liberate himself from the bondage of the guilds to which he is at present subject, and to come face to face with the producer.

It may be argued that even were the guilds of Yedo or Yokohama to be destroyed by such concessions, local institutions, in all respects analogous to them, would inevitably spring up in every commercial centre or producing district to which foreigners would resort. This would

undoubtedly be the case, and it is more than probable that the isolation of the foreigner while in the country would deprive him even of such little power of remonstrance—we give up all idea of combination—as he possesses here. But on the hypothesis that the Government itself can be brought to see the evils of which these guilds are productive, in spite of the plausible grounds on which their existence may be defended, no great difficulty would be found in opposing any of their dealings which were arbitrary and capricious. The basis on which alone the Government can be expected to permit a line of action antagonistic to the guilds is the conviction that they are obstructions to trade, and that it is by an increase of trade that the country must be benefited and the revenue indirectly be raised. If Government were but once secure in this conviction, it would have but little trouble in dealing with the obstructiveness of the smaller local guilds, while those now existing will have already been undermined by the new concessions of which we have just spoken.

Or, if the objections to the course we have suggested are so strong that they cannot be overcome, let us plead for the alternative of a complete liberation of trade in Yokohama at least—we are not forgetful of the interests of the sister ports—from all such restrictions as, either openly or covertly, at present fetter it, if only as an experiment for the guidance of the Government. If it be too much under the present or any probable condition of things to hope that a freedom which has been vainly sought for here during the past fifteen years, should be extended to operations in the interior, why should not a local trial be made of the benefits arising from the unrestricted intercourse of buyer and seller? On a recent occasion we referred to the contrast which the appearance of Yokohama presents to that of the towns and villages in the interior: on the one side industry, prosperity, solidity and comfort, on the other idleness, poverty and meanness of habitation and apparel. If this contrast has been produced by the growth of a trade, cramped and fettered at every turn, what might not be expected under a system which left it free? But an unhappy idea exists in the mind of the Japanese statesman that the only use to which you can put a human being or a prosperous trade is to tax him or it, and so long as this idea lingers there, the idea of a liberal and wise emancipation of trade seems hopeless.

MR. JAQUEMOT's resolution at the late meeting of the Chamber of Commerce has all its force directed towards this end. He contests the right of the *Kaisha*, and by inference, of any guild, to step between the buyer and seller and regulate the terms on which their business shall be transacted. He warmly urges that any such course of action constitutes an infraction of the Treaties and thus becomes the legitimate object of diplomatic remonstrance. The effect of this interference is disastrously visible in the diminution of the number and increase of the power of the native Silk dealers. In former times they were numbered by scores, now they may almost be counted on the fingers, and the greater freedom which once characterized the trade has in a large degree disappeared. The small country dealers who would willingly come direct to the foreigner, or at least deal directly with him—for the bad and humiliating custom, unknown we imagine in any other part of the world, of the foreigner foraging for his purchases, still continues—is now prevented from doing so because on his arrival here he is enclosed in a net and must wait the pleasure of his captor before he can sell his silk and receive his money. The direct advantages of this

course are sufficiently apparent. He gets advice, perhaps advances, is encouraged under an adverse condition of trade, and after some delay possibly gets a rather higher price than he would otherwise have done. But what with interest, commissions, delays and the "sweating" of his money before it reaches his hands, he can hardly be the gainer by the process, while the trade he represents is grievously repressed and has all the real life taken out of it by such regulations. As we have said, the immediate advantages are patent, but the balance of disadvantages is not so, and if laws and regulations are made by the guilds with the privity of a Government, those laws should be instinct with that wise spirit which encourages and fosters trade, not by that which, deluded by an apparent but illusory temporary advantage, cramps and emasculates it.

The desideratum at this moment in Japan is a Minister of Trade who will detach himself from all private interests, whether his own or those of "rings," or guilds, or cliques, and will set himself the task of freeing trade from all encumbrances and allowing it to develop itself without hindrance of any kind soever. Such a man would do more for the country in ten years than will be done in fifty under the repressive policy at present existing, and would enable Japan to realize, in a substantial form, hopes which at present have little more solidity than the stuff which dreams are made of.

#### THE LATE RACES.

OUR Autumn Meeting is over—a thing of the past; one of those few charming re-unions which are so enjoyable and so pleasant abroad; which dot over the dreary, blank expanse of our experiences in a foreign land with little onsets of fleeting pleasures, like brief but pleasant dreams, or, more poetically speaking, like those

—greenest spots on memory's waste,

to which the bored mind of the trader, distracted by falling markets at home and a glut of produce abroad, eagerly recurs from time to time as a relief from "shop" conversation or the distressing intelligence of a new "squeeze" by the Silkmen.

Thursday, Friday and Saturday of last week were, as regards weather, all that could have been wished—three bright, clear, sunshiny days without either the cutting North-Easter or the warm Southerly wind which dries up the Course and brings a blinding cloud of dust across the Stand each time the ponies appear. The sport on the first day was not very exciting—somewhat tame in fact—and the races but mere matches, the winning side being on two stables; but on the second more interest was created by the ponies of the previous day meeting under altered circumstances and conditions, while on the third two valuable cups brought fair fields and closer competition.

The Yokohama Plate for China ponies commenced the Meeting, and this race, by the easy victory of *Edgar*, soon showed the form of Mr. Alfred's stable. Many doubts had been expressed as to the condition ponies trained exclusively on the Rifle Range would appear in when pitted against others accustomed to the dip and severe hill of our Race Course, but after the half-mile post in the above race *Edgar* came to the front and was never caught. After the race, assuredly, the pony did not look in any remarkable form, and though it was industriously spread abroad on the following day that this race was too much for him, he appeared on the third in the Hurdle Race, winning easily from *Massaki*, having taken the hurdles beautifully and finishing in very good time.

As to *Dibs*, the other pony of Mr. Alfred's stable, his style of cantering in ahead of his other competitors in the Nankin Cup showed him to be in excellent condition, and raised the hopes of his party so high that on the second day they decided to scratch him for a half-mile, preferring to trust their chances in a handicap three-quarter mile race. But in this they were sadly mistaken; for though the pony was not handicapped up to the weight his friends said he could carry, he was unable to reach more than second place, and this story was repeated on the third day in the Italian Cup.

*Dibs* though a splendid-looking pony and, when walking round the Paddock the admiration of all, must have but a faint heart, for, when headed in a race, he yields without effort.

Mr. Lloyd commenced his winning mounts with *Crusader* in the Club Cup, coming out again and winning with the same pony in the Visitors' Cup.

The Maiden Stakes would have been more interesting and one of the quickest of Japanese half-mile races had it not been for *Lodi*, the favourite, and *Monte Cristo* going right for the outside, thereby allowing the jockey of *Zephyr*, who was a long way behind, to bring his pony up and score a good win by dint of hard riding. *Boreas* having "bolted" at the start in the Yedo Cup the yellow and green scored an easy (and its only) victory with *Mahtotz*, a fine, black pony brought down from the Imperial stables at Yedo. The cup presented by F. O. Adams Esq. was handed to Mr. Nicolas by Mrs. Hannen, he having complied with the condition of winning the same race at two successive Meetings. *Typhoon* appeared and carried off the Nippon Champion in a canter, following this up on the second day by winning the American Cup in a similar manner, thus showing that he was as good as ever. He, however, succumbed to *Friar Tuck* later on when carrying a 10lbs. penalty in the Exchange Cup.

In the Scurry Stakes a false start, caused by *Arrow* leading *Simoom* off as far as the Stand, allowed *Loup Garou* to win. This pony having, unfortunately, arrived but four days before the races was not fully equal to his China reputation or there would have been nothing here to touch him for half-a-mile:—however, next Spring we may expect to see him do well.

*Chanticleer* not having been brought out on the first day was enabled to make an easy win in the Yokohama Plate, though *Polo* and *Carrots* made a good show for it. In the Ito Cup *Crusader* was favourite, but unfortunately both *Crusader* and *Loup Garou* went for the outer rails, and *Carrots*, amidst great cheering, scored a win for the Chocolate and Purple Stripes.

The Challenge Cup, a race that somehow or other fails to produce large entries, brought the old-established favourite *Chanticleer* and little *Polo*—who this meeting is much improved—to the post; but highly fancied as he was by his own supporters, *Polo* was beaten in the last quarter-mile and the *Tartans* appeared more invincible than ever. In the following race, the Stirrup Cup, arranged for second-class ponies, *Seismograph* proved the winner, coming in some lengths ahead of *Kingcraft* who appeared more suited to the conditions of the race, than *Seismograph*, who later on in the Italian Cup, carrying 6 lbs. additional, was a close second to *Calabar*, one of the best three-quarter-mile ponies here.

The Storekeeper's Plate brought out three ponies, each one from an opposing stable according to the conditions. But here again the same old story has to be repeated: *Crusader* won easily even with his 10 lbs. penalty.

In the next race, The Exchange Cup, *Typhoon* was the favourite. Every one who made a bet wanted to "get on" the "little man," but—strange to tell—although the race looked like a certainty for him up to the distance post, *Friar Tuck* here took up the running and passed the winning post some lengths ahead of the favourite, thereby disappointing not a few. The Handicap Plate for China ponies followed, and though much had been said as to *Loup Garou* being weighted too heavily and *Dibs* not having sufficient, the sequel proved the Stewards to be right in their action. The result brought the ponies together in a remarkable manner—*Calabar* winning in 1m. 39sec., one of the quickest, if not the quickest race run on the Yokohama Course for three quarters of a mile.

The second day closed with the Japan Welter, and though *Tim Whiffer* had to carry 10 lbs. extra the race was looked upon as his, owing to the known propensity of *Boreas* to bolt; but on this occasion *Boreas* had to carry his owner and had but half a mile to go, so what with the shouting of his rider and a strong "persuader" in the shape of the nails of a boot-heel attached to his bit, *Boreas* went straight and well, winning by a length from *Tim Whiffer* whose rider had expected the "gusty one" to "bolt" and thus had remained behind riding a waiting race.

Instead of having a handicap this meeting for the "All Winners" race, the Grand Hotel Cup was set down in the programme for China ponies 11 st. and Japan ponies 10 st., and this novelty only proved the more satisfactorily to the supporters of the China ponies that in a mile-and-a-quarter race, the difference of one stone is not sufficient to equalise the two. Whether any Committee will succeed in deciding upon a scale for equalising China and Japan ponies remains to be proved; but in this instance *Crusader* won easily from *Typhoon* who, though leading for the first three-quarters, was ridden out for the last half mile, while *Crusader* went steadily throughout and passed *Typhoon* as if he had been standing still.

The Solace Cup for all beaten Japanese ponies was to the surprise of everyone won by *Chisai*, who appeared to take the race in his own hands and entirely out of that of his rider, who was at the same time his noble owner.

The Consolation was won by *Yankee Doodle*, who seemed to go better on the last day than the first; a notable difference to the Spring Meeting on which occasion he was the hero of six races. In this instance his jockey showed more discretion than in the previous races and appeared to know what he was about; feeling that he had to try and win and not gallop straight off trusting that no competitor would have the speed to overtake him.

The Italian Cup, a three-quarter mile handicap for all ponies, followed, the top weight being *Crusader* with 11st. 8lbs.; the Stewards with great wisdom not handicapping a pony out of the race but taking off weight and reducing gradually to *Simoom* with 10st. 2lbs. Fifteen ponies were entered and eight started;—*Dibs* being again the favourite. An accident at the start, caused by the breaking of *Calabar's* bridle involved a long delay, but when once the ponies were off *Calabar* took and kept the lead, winning by half a length from *Seismograph*: thus the two great prizes of the meeting fell into the hands of the Tartan stable who have succeeded in scoring nine wins. After the Italian Cup had been run, Mr. Lloyd was presented to H. R. H. the Duke of Genoa, who, in a few words, congratulated him on his triumphs.

No Japanese officers came forward for the Warriors' Plate and a walk over, the only one of the meeting, for the Members Plate brought the programme to an end.

Two *bettoes* and a *jln-riksha* race followed, the first of the *bettoes'* races being won by *Typhoon*, ridden by his Japanese jock, *Fordham*: this mile race was the quickest of the meeting: 2 minutes and 15 seconds.

Ten *jln-rikshas* started round the course, but it was an easy win for one of them in 6 minutes and 59 seconds.

And thus the meeting was brought to a conclusion, everything having passed off pleasantly well. The Band of H. M. S. *Iron Duke* contributed not a little to the amusement of the public. H. R. H. the Duke of Genoa, Sir Harry Parkes, The Hon. Mr. Bingham, and Admiral Sir Charles Shadwell honoured the Stand with their presence.

Before concluding we must not forget a word of praise to the Stewards, one and all, for the excellent arrangements they had made; they were exceedingly fortunate as to weather; the Course was in good order and everything was in their favour. Take it for all in all the meeting may be reckoned as one of the most successful ones. May next spring bring good luck on the new stables about to be formed, for in the name of sport they have our best wishes!

A Subscription Ball at the Yokohama United Club on the following Monday brought to a close the autumnal festivities. Owing to the excellent arrangements which had been made crowding was avoided, and though there were some 250 guests present the large Billiard Room, which had been converted into a Supper Room, did not appear in the least full. Through the kindness of the officers of H. M. S. *Iron Duke* their Band attended, and it was not until the early hours of the following morning that dancing was suspended.

#### THE SCHOOL OF FOREIGN LANGUAGES IN TOKEI.

IN our issue of October 11th we gave an outline of the history, organization and present condition of the Kai Sei Gakkō, or Imperial College in Tokei, with an account of the opening of the new buildings devoted to that portion of the institution which is appropriated to the Shem Mon Gakko, or Polytechnic School.

In this article, we shall describe the *Guai Koku Go Gakko*, or School of Foreign Languages, which is preparatory to, and designed to be the feeder of the Polytechnic School, and which was formerly, until July 10th, 1873, an integral part of the old Nan Ko, and called the Chiu Gakkō, or Middle School.

Here we must pause, not only for our own breathing space, but also to beg our readers' pardon for having led them through such a maze of names. It is not our fault that the name of the Japanese educational institutions are changed two or three times a year. We are not handling a critic's pen, and are simply the faithful scribe who records facts,—and therefore must tell the truth, fervently trusting that no new name will be given to the institutions on Shitotsubashi Avenue in Tokei, until the printer's ink preservative of this fleeting fact is dry, and the scribe's duty is fulfilled.

The day before the new buildings were occupied, the name *Guai Koku Go Gakko* was given to the school which still holds its sessions in the old quarters. The name means "School of Foreign Languages." It has three departments, English, French and German. At present, there are over two hundred scholars in the English department, and somewhat more than that number in the other two departments. There are, at present, one American, five English, three French and three German teachers. In addition to the foreign, there are several native instructors who teach the foreign languages. A half dozen, or so, of interpreters assist the foreign teachers.

Examinations for admittance are held about twice a year, and new classes are started. New scholars are admitted at any time into the higher classes, provided they can pass the necessary examinations. A scholar must be at least seven years old to enter the school. No special

limit seems to be fixed as to the maximum of age, but none are encouraged to become pupils of the school who are over twenty years of age. Until within a few days ago, the law was, that youths seeking admittance to the school must pass a satisfactory examination on standard Japanese authors, write the *hira* and *katakana* well, and show a fair knowledge of their native language. This rule was set aside a few days ago, and no knowledge of the Japanese or Chinese characters is now required from an applicant for admission. Further than this, the study of Japanese and Chinese, in any form, is no longer a part of the course of studies, and if any of the students in the school wish to keep up their former acquisitions in this line, they must do so privately. The same rule applies to the Polytechnic School, thus annulling our statement concerning the study of Japanese, in our issue of October 11th.

In setting forth the order of studies in the School of Foreign Languages, it must be distinctly understood that we make no criticisms, reserving them for the future, and simply state facts, so far as we can get them, and as accurately as the fleeting nature of all things Japanese will allow us to do. Further, it must be known that the programme of studies and method of procedure are made by the Japanese themselves. The foreign teachers have very little to say on the subject. They simply come, teach, and go. Once monthly, the employes go up to the office and get their wages. In this, their responsibility ends. The Japanese have the entire arrangements of studies and school government, and this remark applies as well to the Polytechnic School as to the School of Languages. The pupil entering the school may, or may not, know the Roman alphabet. In the majority of cases, he knows the letters, how to spell, and often how to read. The beginners, the A, B, C, Darians, are placed under Japanese teachers who are supposed to be better fitted than foreigners for this work, and who do it more economically. The sounds of the letters, easy spelling and reading lessons, phrases to be committed to memory and spoken, the writing of figures and letters, are learned in the lowest of the eight classes which form the English department. The entire course of study, from A B C to graduation into the Polytechnic School, theoretically occupies years. Passing out of the lowest classes, the pupil comes under the instructions of the foreign teacher who endeavours, with more or less success, to correct the vicious pronunciation learned by the pupil under his native teachers, and inducts him into arithmetic, writing, and the composition of English sentences. Constant drilling in the fundamental parts of English speech is the staple work done until the pupil reaches the second class, when History and Geography are added. In the highest class, the studies, at present, are in addition to the simple branches, Algebra and Geometry. A schedule of the studies of each class will present the whole course at a glance.

Drawing is taught by a native teacher. Blackboards are freely used, and are in every room. In the three higher classes, no interpreters are used, the scholars being able to understand the foreign teacher, and to speak fluently in English themselves. In the three next lower classes, interpreters are needed to translate the reading lessons, and to assist the foreign teacher. In the last two classes, the native teacher uses mainly his own language in explanation.

The text-books used are: Quackenbos' Smaller Grammar, Gould Brown's Grammar; Goldsmith's Grammar of Geography; Robinson's Algebra, and Geometry; Felter's Arithmetic; The Union series of Reading-books; Webster's Spelling-book; Bellenger's Modern Conversation; the Spencerian System of Writing and Copy Books; Worcester's Universal History.

The scholars and teachers attend recitations five hours a day; viz, from 8 A. M. to 12 A. M. and from 1 P. M. to 2 P. M. Nominally, each pupil should pay five *yen* and a half *per mensem*; but in reality, the large majority of them pay but *one yen*, on the plea of poverty. All attempts to enforce the payment of the full amount have failed.

No rules as to dress etc. exist, and almost all the pupils wear the ordinary *samurai* clothes, though all are required to put on shoes, except in case of poverty. Examinations are held several times a year, and the classes are kept fairly weeded out. In many cases, it is noticed that a promising boy does very well, and even excels, up to a certain point, and then, after remaining awhile in unstable equilibrium, slides rapidly down through several classes. In such cases the pupil is invited to leave the school.

While punctuality and regular attendance are most rigidly insisted upon and actually enforced, the school officers have no oversight of the scholars after they have left the school.

The buildings in use at the present time have been as cheaply thrown together as mud, laths and plaster, unseasoned timber and hasty work, could make them. They are long rows of sheds plastered and tiled, and warmed in winter with Lilliputian stoves of native casting. In wet weather, the rain shows its character as being a respecter neither of roofs nor persons, and an occasional tumbling down of the ceiling adds variety to the studies and furnishes practical illustration of the laws of gravity. The organization of control over the Polytechnic and Language Schools is the same. Both are directly under the control of the *Mom Bu Sho*. There are two Directors, five *Kanji*, or Inspectors, and a full complement of clerks, librarians, and servants of all grades.

# A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

## 2ND YEAR OF BUNKIU, (1862).

Intercalary 8th month, 1st day.—The Daimio of Wakamatsu was entrusted with the defence of Kioto. In the 9th month he received land to the value of 50,000 kokus by way of official salary.

Intercalary 8th month, 2nd day.—On this and on the following day interviews took place with the French at the residence of the Daimio of Yamagata about the Namamugi affair, it was said.

Intercalary 8th month, 3rd day.—The Daimio of Hikone was ordered to punish severely his vassal Nagano Shuzen. He replied that he had put Shuzen to death on the 27th ultimo.

Intercalary 8th month, 5th day.—The late Prince of Mito was raised to the rank of Junii and was made Dainagon.

Intercalary 8th month, 8th day.—The Daimio of Utsunomiya asked leave to repair the shrines of Nikkwo. Leave was given on the 14th.

Intercalary 8th month, 8th day.—A grant of 3000 dollars was made to the relatives of the Englishmen killed at Tozenji.

Intercalary 8th month, 9th day.—The Russians had an audience, and presented a letter from the Czar. This letter was said to be in acknowledgement of the sending of ambassadors and consenting to the postponement of the opening of the ports.

Intercalary 8th month, 14th day.—The Daimios were privately informed that their alternate attendance at Yedo was dispensed with.

Intercalary 8th month, 15th day.—The Daimios were invited to state in writing their views as to the best means of heightening the national power and prestige.

Intercalary 8th month 15th day.—The Daimio of Obama was deprived of 10,000 kokus of revenue, and was ordered to retire from public life and to confine himself to his own house.

Intercalary 8th month 17th day.—Notice was given that it was permitted to pass through the barriers in the different provinces carrying fire arms.

Intercalary 8th month 20th day.—The Daimio of Hikone was relieved of the defence of Kioto.

Intercalary 8th month 20th day.—At Kioto the runaway clansmen murdered one of their own number named Homma Sei ichiro and exposed his head at Shijogawara.

Intercalary 8th month 21st day.—An interview took place with the Americans at the residence of the Daimio of Yamagata.

Intercalary 8th month 22nd day.—Great reforms were announced, the Daimios were released from taking their turns of residence at Yedo, they were allowed to take their wives and daughters to their provinces, and were recommended economy in dress and in attendants.

Intercalary 8th month 22nd day.—At Kioto the runaway clansmen murdered a Karo of Lord Kujo named Ukio Gamba and exposed his head in the Matsubara street.

Intercalary 8th month 23rd day.—Shimadzu Saburo left Kioto and went to his province.

Intercalary 8th month 29th day.—At Kioto the runaway clansmen murdered Meakashi Bunkichi and set up his head in the river near the Sanjo bridge.

9th month 1st day.—Orders were given to take steps to prevent distress among the serving-men.

9th month, 3rd day.—Lord Kujo was ordered to live in seclusion.

9th month, 4th day.—The Mikado gave orders that the Daimio of Kochi should exchange with the old Daimio of Kochi.

9th month, 6th day.—The Daimio of Tatsuno ceased to be Roju.

9th month, 6th day.—Notice was given that the Shogun would not in future see the Archery at the Military School.

9th month, 7th day.—Notice was given that the Shogun would visit the Mikado in the 2nd month of next year.

9th month, 7th day.—The old Daimio of Nagoya was made Junii and Dainagon.

9th month, 8th day.—Lords Sanjo and Anenokoji were appointed special Envoys to take to Kwanto the edict of the Mikado for the expulsion of the barbarians.

9th month, 11th day.—The heir of the Daimio of Karatsu was made of the rank of Roju.

9th month, 12th day.—Lord Hitotsubashi was ordered to Kioto, but the order was cancelled on the 1st day of the 10th month.

9th month, 23rd day.—At Ishibe the runaway clansmen murdered Watanabe Kinsaburo, Mori Magoroku and Ogawara Juzo and exposed their heads at the Awata gate on the following day.

9th month, 24th day.—An interview took place with the Americans at the residence of the Daimio of Matsuyama.

9th month, 25th day.—Lords Kujo, father and son, Lords Koga, Chigusa Jikwan, Iwakura Sayama and Tominokeji Koun were ordered to take up their abode outside of Kioto.

In this month guardhouses were erected every 5 cho on the road between Kawasaki and Hodogaya, it was said at the request of the foreigners.

10th month, 1st day.—An American vessel was shipwrecked at Choshi in Shimosa.

10th month, 6th day.—The Tozama Daimios were informed that they need not accompany the Shogun to Kioto, but might proceed thither at their convenience.

10th month, 9th day.—The Daimio of Hamamatsu was appointed Roju.

10th month, 10th day.—The Shogun paid a private visit to Sugamo.

10th month, 11th day.—At Kioto the runaway clansmen bound with cords a merchant named Jisaburo Hambei and exposed him in this state at Nijogawara.

10th month, 12th day.—Lords Sanjo and Anenokoji the Mikado's Envoys set out from Kioto guarded by the Daimio of Kochi. They arrived in Yedo on the 28th.

10th month, 13th day.—An interview took place with the English at the residence of the Daimio of Yamagata about the Namamugi affair, it was said.

10th month, 13th day.—The Daimios of Nagoya, Wakayama and Mito were presented with hats of the fashion called "hazorigasa."

10th month, 14th day.—The Daimio of Kurume arrived at Kioto.

10th month, 15th day.—The Daimios of Tottori and Hiroshima arrived at Kioto.

10th month, 15th day.—The Daimio of Tokushima (Awa) was ordered to attend frequently at the Castle and lay before the Shogun his views.

10th month, 18th day.—The shrine of the Mikado Go daigo II., at Yoshiuo was injured by an earthquake.

10th month, 18th day.—Orders were given for unusual simplicity in the arrangements for the Shogun's visit to the Mikado, and notice was given that it was unnecessary to close the windows along his route.

10th month 21st day.—The Daimio of Tottori set out from Kioto. He reached Yedo on the 5th of the 11th month. He had received orders to assist the Imperial Envoys.

10th month 23rd day.—Yoshida Shinnoeke, an unattached samurai had an audience of the Shogun.

10th month 25th day.—From this day the Shogun suffered from an attack of measles.

10th month 27th day.—The Daimio of Oka had got as far as Fushimi on his way to Kioto when the runaway clansmen attempted to murder him. He went back to Osaka. It was said that this was because he despised the Imperial Envoys.

11th month 1st day.—Lord Hitotsubashi was made Chunagon.

11th month, 7th day.—The Daimios of Kagoshima and Tokushima arrived in Kioto.

11th month 7th day.—A samurai of the Hikone Han named Kato Kichidayu went to the residence of the Daimio of Hamamatsu and committed suicide. He had drawn up a petition respecting the discontinuance of the defence of Kioto the transfer of territory from one Daimio to another etc.

11th month 12th day.—The dignity of Gusammi and the title of Gonchunagon were conferred on the late Daimio of Kagoshima.

11th month 12th day.—A number of Choshu and Tosa samurai assembled at Kanagawa with the object of burning Yokohama. They were unsuccessful.

11th month 13th day.—The Envoys to Europe informed the Government that it was possible French men-of-war might visit Osaka.

11th month 15th day.—At Kioto the runaway clansmen bound with cords the wife of Nagano Shuzen of the Hikone Han and exposed her in this state at Sanjo gawara.

11th month 16th day.—The runaway clansmen murdered Tada Tatewaki in the Temple of Kinkakuji and set up his head at the Awata gate.

11th month 20th day.—The Daimio of Hikone was deprived of revenue to the amount of 100,000 kokus; the Daimio of Murakami was ordered to restore the lands he had received in exchange; the Daimio of Sabaye was deprived of 10,000 kokus of revenue and ordered to retire from public life and confine himself to this house; the old Daimios of Obama, Sakura, Sekiyado and Taira were condemned to strict seclusion; the Daimio of Sekiyado was deprived of 10,000 kokus of revenue and the Daimio of Taira of 20,000; Ogasawara Nagato no Kami was condemned to strict seclusion; Yakushiji Seizan was deprived of his pension and his son Bitchu no Kami of 700 kokus of revenue.

11th month 21st day.—The Daimio of Tsu arrived at Kioto.

11th month 22nd day.—The title of Princess Kadzu was restored to the Shogun's wife.

11th month 23rd day.—The old Daimio of Tosa was condemned to strict seclusion, the old Daimio of Tatsuno to confine himself to his house, the Daimio of Nishio to restore the lands he had taken in exchange (for others of less value) and retire from public life, the Daimio of Miyadzu, the old Daimio of Numadzu and Aseno Iga no Kami to avoid appearing in public, Matsudaira Idzumo no Kami, Okubo Etchu no Kami, Matsudaira Shikibu no Shoyu, Komai Yamashiro no Kami, Kurokawa Bitchu no Kami, Okabe Tosa no Kami, and Ikeda Harima no Kami to lose their offices and to refrain from appearing in public, Kugai Totomi no Kami to refrain from appearing in public, and his son Sagami no Kami to lose 2000 kokus of revenue, and Ishigaya Nagato no Kami to retire from public life and to refrain from appearing in public. These punishments were on account of the Kioto imprisonments in the year 1858.

11th month, 27th day.—The Imperial Envoys Sanjo and his colleagues had an audience of the Shogun.

12th month, 3rd day.—The Daimios were ordered to furnish a war contribution of half the amount raised in the period Kei-an (1648-52).

12th month, 4th day.—Lord Sanjo and his colleagues were entertained at the Castle.

12th month, 4th day.—The Daimio of Tottori left Yedo, on the 18th he arrived at Kioto.

12th month, 5th day.—Lord Sanjo and his colleagues had an audience of the Shogun at which the latter responded to the Mikado's message.

12th month, 5th day.—The old Prince of Saga came to Kioto.

12th month, 7th day.—Lord Sanjo and his colleagues left Yedo guarded by the heir of the Daimio of Choshu. They arrived at Kioto on the 23rd.

12th month, 9th day.—The Daimio of Wakamatsu left Yedo for Kioto.

12th month, 11th day.—Takenouchi Shimosa no Kami and his colleagues returned from Europe.

12th month 12th day.—Yasui Chuhei of the Obi Han, Shiwonoya Kozo of the Yamagata Han and Yoshino Rinzo of the Tanaka Han were appointed Jusha (Chinese Scholars); Yamada Yasugoro of the Matsuyama Han and Kaneko Yosaburo of the Kami no yama Han were admitted to an audience of the Shogun.

12th month, 13th day.—The foreigner's residence on Gotenryama was destroyed by fire. It was probably set fire to by some of the runaway clansmen.

12th month 13th day.—The Daimios were ordered to report upon the Imperial order to expel the barbarians.

12th month 15th day.—The Daimios were informed that the Daimio of Mito had been ordered to carry out the Imperial command of 1858.

12th month 16th day.—An interview took place with the French at the residence of the Daimio of Yamagata.

12th month 17th day.—Lord Hitotsubashi was ordered to inspect Osaka. He arrived at Kioto on the 6th day of the 1st month. Takeda Kouinsai of the Mito Han was ordered to accompany him.

12th month, 17th day.—The heir of the Daimio of Karatsu went by sea to Osaka.

12th month 18th day.—The Daimio of Tokushima was appointed General-in-Chief. This appointment was cancelled on the 28rd of the 1st month.

12th month 21st day.—At Yedo, the runaway clansmen attempted to cut down Yokoi Heishiro of the Kumamoto Han. Heishiro escaped.

12th month 22nd day.—At Yedo the runaway clansmen cut down Hanawa Jiro. They put up a notice at the Nihonbashi the next day stating that the vengeance of Heaven had fallen on the man who had reported upon cases of Mikados being forced to abdicate.

12th month 22nd day.—At Mibu sixteen clansmen killed a Karo named Torii Shima.

12th month 29th day.—Kawanoto Komin and Sugita Gentau of the Kagoshima Han and Mitsukuri Gempo of the Tsuyama Han were appointed Professors at the institution for the examination of western books.

12th month 29th day.—It was notified that the Shogun would go to Kioto by sea when proceeding to visit the Mikado. It was afterwards notified that he would proceed by land.

At this time America was greatly troubled.

(To be continued.)

#### YOKOHAMA AUTUMN MEETING.

##### Third Day, Saturday, 35th October.

The attendance on the course was, as might have been expected, smaller than on the preceding days.—The first race contested was the

##### 1.—HURDLE RACE.

Value \$75. For all Ponies. Over six (6) Hurdles. Weight: China Ponies, 11st; Japan Ponies, 10st. 7 lbs. Entrance, \$5. Once round.

Mr. Alfred's	...	...	Edgar	...	...	1
Dr. Buckle's	...	...	Massaki	...	...	2

Edgar and Massaki alone started for this race. The former of these ponies led by a clear length the whole distance run and came in a winner with ease. Time 2m 33½sec.

##### 2.—THE GRAND HOTEL CUP.

Value \$200. Presented. For all winners at this meeting. Entrance compulsory; optional for beaten ponies. Weight: China Ponies, 11st.; Japan Ponies, 10st. Entrance, \$10. One mile and a quarter.

Mr. Lloyd's	...	...	Crusader	...	...	1
Dr. Wheeler's	...	...	Typhoon	...	...	2
Mr. Lloyd's	...	...	Friar Tuck	...	...	3
Mr. Alfred's	...	...	Edgar	...	...	0
Mr. Lloyd's	...	...	Chanticleer	...	...	0
Dr. Buckle's	...	...	Swop	...	...	0

Although there were seventeen entries for the handsome Cup presented by W. H. Smith, Esq., only six horses started. Typhoon got the start and headed the running as far as the half-mile post. At this point Crusader who had been kept in hand came to the front and had from that time the advantage of the race, beating Typhoon by about two lengths. Friar Tuck was third. Time 2m. 55 sec.

##### 3.—THE SOLACE CUP.

Value \$75. For all beaten Japan Ponies at this meeting. Weight as per scale. Entrance, \$5. One mile.

Mr. Cassembroot's	...	...	Chisai	...	...	1
Mr. John Grigor's	...	...	Monte Cristo	...	...	2
Dr. Buckle's	...	...	Massaki	...	...	3
Mr. Edward-Ola's	...	...	Akambe	...	...	0

Four horses started for this race *Monte Cristo*, being the favourite. On reaching the half mile post *Chisai* was placed abreast of him and from that point headed the running, winning the race. Time 2m. 55sec.

#### 4.—THE CONSOLATION CUP.

Value \$100. For all beaten China Ponies at this meeting. Weight as per scale. Entrance, \$5. Once round and a distance.

Mr. Shepard's ...	...Yankee Doodle ...	1
Mr. Edward-Ola's ...	...Polo ...	2
Mr. Lloyd's ...	...Daybreak ...	3
Mr. Edward-Ola's ...	...Khiva ...	0
Mr. Sandwith's, ...	...Kingerast ...	0

Five horses started for this race (the Chocolate and Purple stripes stable sending two representatives) and all got away together. *Yankee Doodle* was held in hand after the start but soon secured a better position, took the lead and won without difficulty. Time 2m. 47sec.

#### 5.—THE ITALIAN CUP.

Presented. A Handicap for all ponies. Conditions to be published hereafter.

Mr. Lloyd's ...	...Calabar (lt. Spite) 1
Mr. Osborne's ...	...Seismograph ... 2
Dr. Wheeler's ...	...Typhoon ... 3
Mr. Lloyd's ...	...Crusader ... 0
Mr. Alfred's ...	...Dibs ... 0
Mr. Shepard's ...	...Yankee Doodle ... 0
Mr. Edward-Ola's ...	...Carrots ... 0
Dr. Wheeler's ...	...Simoom ... 0

This was without doubt the best race of the present meeting. *Calabar* gave some trouble at the start and it was found necessary to obtain a new bridle. A start was at length effected which left *Crusader* at the post and *Edgar* and *Yankee Doodle* in the back ground. *Calabar* took and maintained a leading position in the race and won by a length from *Seismograph*. Time 1m. 39½ sec.

At the conclusion of the race Mr. Lloyd was presented to H. R. H. the Duke of Genoa who offered congratulations on his success.

Eight started for this handicap, a circumstance which proves how well the ponies had been brought together. Time 1m. 39½ sec.

#### 6.—THE WARRIORS' CUP.

Presented by the Race Club. For Japan Ponies, ridden by native officers, in the service of the Japanese Government. Once round.

No Japanese Officers came forward to contest for the very handsome Silver Cup presented by the Club, and the race did not have effect.

#### 7.—THE MEMBERS' CUP.

Value \$50 to first pony, \$25 to second Pony, and \$10 to third pony. For all ponies that have never run at any meeting, to be ridden by members, who have not ridden at this meeting, except in Race No. 9, second day. Catch weights. Entrance, \$5. Once round.

*Daybreak* having run before and *Mustard* being unwell *Envoy* walked over.

Two bettos' races and a *Jinrikisha* race followed hereupon, and brought to a termination the closing day of one of the most successful Autumnal Race Meetings yet known in Yokohama.

#### YOKOHAMA GENERAL CHAMBER OF COMMERCE.

A Meeting was held on the 30th ultimo, pursuant to notice, at the rooms of the Chamber of Commerce for the purpose of receiving the report of the Sub-Committee, nominated at the meeting held on the 22nd instant, to confer with the Japanese Silk Guild upon the subject of the recent alterations in the tare allowance which had hitherto been made on silk.

Mr. Wilkin occupied the Chair.

The Secretary having read the minutes of the proceedings at the previous Meeting,

The Meeting was addressed by the Chairman, who read the report of the Committee appointed to confer with the Silk Guild, and the reply which has been transmitted to them by the latter body.

The report was as follows:—

YOKOHAMA, Oct. 28, 1873.

To A. J. WILKIN, Esq., Chairman Yokohama General Chamber of Commerce.

SIR,—We, the undersigned, acting as your Committee, beg herewith to hand you a report of our proceedings in the matter of the difference with the Silk Guild of Yokohama. Immediately after the conclusion of the meeting on Wednesday, 22nd inst., we repaired to the godown of the Kiito Aratame Kaisha, accompanied by an interpreter; and after a little delay were brought into direct communication with the heads of the silk houses of Nozawaya, Gumayah, Itoyah and Kumachichi. We at once informed them of the result of the meeting at the Chamber of Commerce and laid before the representatives of the above houses in a plain and concise way, the full import of the resolution passed, at the same time informing them that it was not within our province to discuss the matter, and at the same time added that what had been detailed to them verbally should, in due course, be handed them in writing with a translation attached. We, in continuation, begged the Japanese representatives to meet us at their earliest convenience, and to save time, to bring with them their answer in writing. To this they at once assented, and appointed a meeting for the next evening, the 23rd, at six o'clock, naming Mr. Jaquemot's office as the rendezvous. In accordance with this we, your Committee, met at the appointed hour, to find that the Japanese representatives did not put in an appearance, but instead, sent up a brief message to the effect that 8 o'clock the next morning, the 24th, would suit them better. There being no help for it we again acceded only to be treated in a like manner, for again the Japanese did not appear. Finally, they sent us a written answer, as per copy herewith. This answer speaks for itself. In closing this brief report of what passed, we, your Committee, cannot refrain from making mention of the very high-handed and discourteous way in which we were treated whilst carrying out the duties imposed upon us by the Chamber of Commerce.

We are, &c.,

J. M. JAQUEMOT,  
BAVIER & Co.,  
F. W. A. WHITE.

YOKOHAMA, 23rd Oct., 1873.

To the Members of the Kiito Aratame Kaisha.

GENTLEMEN,—We, the undersigned, having been appointed by the General Chamber of Commerce of Yokohama with a view to come to an understanding with you in order to put the Silktrade of this place upon an uniform and stable basis, beg to inform you in writing (as we have already done verbally) of the terms which were unanimously adopted by the Chamber of Commerce of Yokohama at the meeting which was held yesterday for the purpose.

"From and after this date for all kinds of Silk sold the actual weights of the Shirting bags or baskets in which the Silk is weighed shall be deducted. The Tare to be deducted for the papers and strings of Hank Silk of such weight as they actually are at present, shall be fixed at 2½ per cent.

"The Tare for paper and strings of other kinds than hanks shall continue to be settled by mutual consent of both buyer and seller.

"Upon the net weight of the Silk, after deduction of all tares, one per cent shall be allowed to the buyer as a compensation for dampness.

"That an allowance of 1 per cent. shall be made on all kinds of Silk whether made up in hanks or otherwise.

"No other allowance whatever shall be made by the sellers to the buyers either for musters or anything else."

Please submit the above terms to your Corporation as the future rules of the silk trade of this place, and inform us as early as you possibly can, of their being accepted by your Guild so that business may no longer be delayed.

We have, &c.,

J. M. JAQUEMOT,  
BAVIER & Co.,  
F. W. A. WHITE.

The following is a translated version of the reply of the Kaisha:

On the 22nd instant, you came to the Kiito Aratame Kaisha on the part of the Chamber of Commerce of Yokohama. We have well understood what you spoke about and have consulted the silk owners of the various provinces. There is one point we cannot grant, which is that upon the net weight

of the silk sold, after deducting all tares, one per cent shall be allowed to the buyers as a compensation for dampness.

For the weight of papers and strings of Hank silk  $2\frac{1}{2}$  per cent are deducted; but in reality there is only 1.6/10 or 1.7/10 per cent. The balance is therefore a compensation for dampness. Consequently we cannot allow the buyers the one per cent extra you ask for.

Should you accept this point we shall grant you the others. Please consult the Chamber of Commerce and give us a reply.

NEBARRA SIRROZAIMON,  
SUZUKI YASSUBE,

On duty for this month at the Kiito Aratame Kaisha.

The Chairman pointed out that the apparent discourtesy in terms of the reply might most probably be imputed to Eastern phraseology and the interpretation of the translator, and having invited an expression of opinion on the part of the Meeting,

Mr. J. M. Jaquemot rose to propose a resolution. It was obvious to him as a Member of the Committee which had waited upon the Silk Guild, that the conclusions announced by that body were formed irrespective of the representations which the Committee were charged to make. Deliberation was clearly impossible, and the short space of time which elapsed between the receipt of the message and the announcement of the reply proved that their determination was foregone and unlikely to be shaken by such points as the Committee had been able to urge. Everything indicated that the Japanese were prepared to profit by the disunion of the foreign buyers, and that they saw in it a fertile source of strength to themselves. They, no doubt, argued that as the buyers could not combine they could insist upon no definite course of action, and hence their decision.

In expressing at the last meeting, his strong desire for a consolidated action on their side, he had, by no means, wished to imitate the factious combination of their opponents. He knew that nothing would affect them but the knowledge that the foreigners possessed the strength of a moral combination against them; and was satisfied that, had they been able to agree to and maintain this combination to secure a fair treatment of their terms they would now enjoy a better position. But the Japanese knew their weakness and the game is in their hands, thanks to the want of unanimity in action and in feeling of the foreign body. The present attitude in which they stood relatively to the native trade is one which must occasion some disquietude. They were alone as it were; while their opponents were an united, solid body, bound by the decision of their Corporation and that decision was against them. The question now is how far the conditions of the treaty may be found to avail them. He maintained that its clauses had been grossly violated and ignored by the very action of this *Kaisha*, and, he believed, might state that the opinions of the Representatives of the various Treaty Powers will be found to acquiesce in this view. It was by treaty provided that foreigner and native should be permitted the free interchange of produce. But was it not a fact that no silk-merchant could trade with them without a license, and that as a condition of obtaining this he must be a member of the *Kaisha*?

The sooner they knew their position the better. To yield now meant to invite future attack. For his part he was resolved to resist to the uttermost the dictation of the *Kaisha*. Resistance was essential and he would resist.—Mr. Jaquemot concluded by moving the following resolution:—

Whereas the Kiito Aratame Kaisha is a Japanese institution connected with and under the control of the Japanese Authorities; and whereas the Kiito Aratame Kaisha issues rules, edicts and ordinances by which the whole of the privileged Silk merchants of Yokohama are governed; and whereas the Kiito Aratame Kaisha has the power to impose fines on or otherwise punish the native merchants whenever the latter act in opposition to the wishes or ordinances of the Kiito Aratame Kaisha; considering that in consequence of the power thus possessed by the Kiito the native merchants individually are afraid of entering into any commercial operation which might subject them to the penalties alluded to above:

Considering that the system of intimidation thus exercised by the Kiito is in direct contradiction with Article XIV. of the British Treaty which provides that, "British subjects may freely buy from Japanese and sell to them any articles that either may have for sale without the intervention of any Japanese officers in such purchase or sale;" considering that it is by a body of men acting under the authority and sanction of the Japanese Government that the pressure is ex-

ercised the result is practically the same as if it had been done by the Government itself, in virtue of the old axiom *quis facit per alios facit per se*; and whereas the Kiito has in two recent circumstances imposed upon the native dealers certain rules interfering with usages of trade, which have been in existence for a long time, whereby commercial operations have been considerably perturbed and impeded; and whereas the best if not the only practical means of counteracting the power of the Kiito would be for the foreign merchants to form a combination of their own with a view to resist the Kiito; and whereas the laws of all the foreign powers prohibited all such ways and manners of intimidation as are resorted to by the Japanese, considering that a combination on the Japanese system is illegal as far as the foreign merchants are concerned and cannot be adopted by them; considering, besides, that the foreign silk merchants possess no means of effectually resisting the aggressive tendency of the Japanese Silk Guild and are at a loss how to protect their interests which are now in abeyance; I therefore move:—

That the circumstances in which the silk trade of Yokohama is situated constitutes an infraction of the Treaty, and that an appeal be made to the Foreign Representatives with an earnest request that their attention may be drawn at their earliest convenience to the above grievances.

Mr. Bavier seconded the resolution.

Mr. Kingdon thought the action of the Japanese dealers in endeavouring to obtain payment for the actual weight of their silk was commendable. The silk was sometimes packed in bags of 37 to 40 lbs only, and in such cases the allowance of 1 lb. became most oppressive. He fully felt that they were entitled to payment for the weight of silk they delivered. The question of damp and the loss from desiccation *in transitu* were new features in the discussion. Most produce does lose in weight in course of time, and the loss must be borne by the buyer and calculated by him as an element of cost. He concluded by proposing the following resolution:—

That in regard to the tare either we should wait until the receipt of account sales from Europe, or that we should weigh the tare and deduct the true weight.

This resolution was not seconded.

The original resolution on being put to the meeting was carried by a majority.

Mr. Bavier moved that the Chairman take the necessary steps to bring the resolution passed before the Representatives of the various treaty powers.

Mr. Jaquemot seconded the motion.

Mr. Bavier then propose the following:—

That the Committee appointed at the last meeting answer the *Kaisha* to the effect that the matter remains in abeyance at present, the whole question having been referred to the Representatives of Treaty powers.

The motion was seconded by Mr. Sitwell.

Some desultory observations from several members ensued, and, there being no further business before the Meeting, the proceedings were brought to a close by a vote of thanks to the Chairman.

## OUR NEIGHBOURHOOD.

### PART III.

A man he was to all the country dear,  
GOLDSMITH.—Deserted Village.

Hard by the *Saké* shop may be seen the stone mason's studio. It is garnished with blocks of stones of all shapes and sizes, and every degree of hardness, which, piled on either side of the entrance, seem to be patiently waiting their turn to be chipped and smoothed and carved and inscribed. On the right hand of the door stand two wicked-looking stone griffins, who seem to be putting their diabolical old heads together and whispering over some horrible secret as they regard one another out of the corners of their cruel eyes, which, with their rims painted red, look as if they had grown bloodshot from being ever on the watch unwinkingly night and day. The unevenness of the pedestals on which they sit has inclined them towards one another until their heads almost touch, and they appear as if momentarily interrupted in their goblin conversation, as, with raised paw, they listen for a repetition of the sound which has aroused their suspicion. Their capacious mouths, distended with a ghastly grin, disclose each one long dog-tooth. A horrid grin in sooth it is; not by any means the grin of good fellowship which lifts up the corners of the mouth, nor yet the sardonic

*rius* which depresses the same; but the cruel, satisfied stony grin of a cunning and malignant purpose—a purpose with a certainty in it of its being accomplished sooner or later. They look the petrified impersonation of evil. Not one trace of impatience or doubt is portrayed in their grim visages, but, instead, a fell steadfastness of belief, and a calm expectancy, that their opportunity for evil will arrive at last. One almost expects to see a paw raised a little higher, and applied to the side of the nose, and a blood-shot eye closing in a dreadful wink as one of the monsters watching his opportunity to fall off his pedestal, crushes to death the children who play about his base.

It is pleasant to turn from the contemplation of so much malignity to the sturdy stone-mason himself as he stands with legs apart and hands behind his back, critically regarding a work of art which he has just completed. Good humour beams in every line of his honest countenance. Can it be that such an amiable looking individual is the fashioner of the dragons just described? Perhaps he has freighted them with his evil passions, and cast them out as it is said the fox rides himself of fleas, who taking, we are told, a bunch of dry moss in his mouth and seeking the nearest river, gradually submerges himself, dipping in first the tip of his tail, and by slow degrees immersing his whole body, so that his tormentors may have time to ascend as he descends, and seek a refuge in the moss. When his nose is just disappearing he sets free the freighted island which bobs along merrily adown the river, whilst the fox, relieved in mind and body, seeks again the bank and retires happy and contented to his haunts. Be that how it may, however, certain it is that the children of our "Our Neighbourhood" love to congregate about the workshop of the stone-mason, and the elder folks greet him with a cheery word as they pass his door. He looks like a thorough workman—dressed in his blue, tight-fitting casings for his legs, and a light blue coat girt up at the corners, and tied around his body with an *Obi* which supports his pipe-case and tobacco pouch, and though worn and sprinkled with stone dust his garments are neat and appropriate.

The object of his admiration is a little head-stone of great pretensions. It is tinted blue and carries a gilded inscription upon its face, and on its sides are displayed, upon the right a gilded tortoise and a lily in full bloom, and on the left a crane marching majestically along in a field of blue. It has a special purpose, no doubt, has this highly ornamented stone and is made to order. Perhaps it records the untimely fate of some little child, or tells the passer-by when some sweetheart "ceased to be."

Chip, chip, chip, he's at work again; the times are good and business is brisk, so he has not much time to waste in looking at his handiwork. He keeps his spirits going by shouting a roystering song or chaffing the blind priest's maid opposite when she shows her face at the door. He's a merry fellow, and of a sporting turn, too, if one may judge by the fighting cocks which he keeps in a corner in separate cages, and which shew by their battered and bloody bodies, from which most of the feathers have been plucked in many an encounter, that it cannot be altogether for their ornamental appearance that they are cherished. He sets great store apparently by these warlike fowls, whom he occasionally addresses, and regards affectionately, when he intermits his labour to have a pipe.

A pair of lop-eared rabbits may be seen upon a shelf above his head, and by the door a cage of canaries, a present from his friend the little barber.

He is a great believer in the importance to the whole human family of stones. He'll discourse quite learnedly upon the *nebukane* the *idushi*, the *aoishi* and what not. "What more noble and lasting medium" he's wont to say, "can you find wherewith to transmit to children's children the mighty deeds of their ancestors?" He's quite triumphant over the *Kanami tshi*, in the vicinity of "Our Neighbourhood." This is a stone remarkable for its many virtues, amongst which may be placed, in the front rank, its efficacy in relieving of his disorder the sufferer from *kakke*, or *beribari*, and strengthening the legs of pilgrims. Its whereabouts is marked by a pile of

salt which has been scattered above it for many centuries, he will tell you. It is shaped like the pin which fastens a fan together, and cannot be removed by digging. The more one digs down in fact, the more hopeless the undertaking is said to become. Numerous cures are reported in "Our Neighbourhood," and it is the rankest of heresy to question them. There are but two other such stones in the mighty city of Yedo, one at Kôji machi, and the third at Biôgoku bashi. The salt is rubbed into the soles of the feet by such as wear clogs, and is dropped into the shoes by the soldiers from the great barracks, who are largely afflicted by the complaint it is said to cure, and who even fill their pocket-books with it for future use.

Yedo, 29th October, 1873.

## Correspondence.

TO THE EDITOR OF THE *Japan Weekly Mail*.

SIR,—On turning over an old file of the *Japan Weekly Mail* my attention was attracted to the following passage in an account of Loochoo by Mr. E. M. Satow read before the Asiatic Society of Japan:—

Formerly, when a Loochooan died, he was provisionally buried for three years, until his corpse decomposed so far as to leave only the bones. These were taken out of the coffin, washed clean in a kind of *sake* called *awamori*, and being placed in a small vase, were deposited in the tomb. The tombs are small holes excavated in hill-sides, just large enough to admit the vase, and the entrances are closed with wooden doors or slabs of stone. It seems, however, that at the present time the ordinary Japanese method of burying the corpse at once is followed, the ceremony being conducted by Buddhist priests.

Can any of your correspondents tell me if this mode of disposing of the dead is, or was, common to other Eastern nations? I have recently had an opportunity of observing a custom among the Maoris in New Zealand which, though almost identical, differs in some particulars. They take up their dead after they have lain in the caverns, or *tapu* spots in which they are deposited, for about 18 months or so. The relatives from all parts, and the various neighbouring tribes are invited to attend the ceremony of bone-cleaning, and hecatombs of ox and pig and piles of baskets of sweet potatoes, of *taro* and bags of flour are prepared to minister to the appetites of the pious survivors. An irrepressible "Globetrotter," I attended one of these festivals as the guest of a native gentleman, and observed the method of "scraping an acquaintance" practised in the South Seas, and the process of removing the muddy vesture of decay and polishing the bones to a brilliant lustre with a mussel shell. I, however, did not observe that the casks of new rum I saw there were employed for the pious purpose alluded to in Mr. Satow's narrative; but as a New Zealander would probably regard such purification as sheer surplussage, I presume that the jovial countenances and unsteady gait of many of the guests were not altogether unconnected with their presence.—The bones I was told were collected and consigned to a final resting place in some *tapu'd* spot in the forest.

I am, your &c.,

A. GLOBETROTTER.

## THE SILK-TARE QUESTION.

TO THE EDITOR OF THE *Japan Mail Daily Advertiser*.

SIR,—The determined opposition shown by certain silk houses to the request that the merchants concerned in the silk trade should abstain for a few days from buying upon other terms than those ruling hitherto, has, in my opinion, had so unfavourable an effect upon the result of the communications between the Sub-Committee of the Chamber of Commerce and the native Silk Guild, that I hope I shall be pardoned if I give you my views upon one of the points which I think ought to be adopted at the next meeting of the Chamber of Commerce.

I willingly admit that those of the foreign houses who refused hitherto to combine with others, have a *prima facie* justification in saying that they cannot take upon themselves to leave their orders unexecuted, which they would be compelled to do if they were to join with others in a combination.

But at the same time they lose sight of the fact that if

they yield to unreasonable demands on the part of the Japanese dealers, they do so to the detriment of their constituents, who would, no doubt, much prefer to see the execution of their orders delayed for a time, than to have their interests imperilled either by the acts of the native Guilds, or by the opposition of their own agents to a combination. The European constituents not being here on the spot to protect their interests, must fain leave them in the hands of the Yokohama houses; and how can the latter pretend that they are doing their best for their friends, if they neglect any fair means proposed by other people, by refusing to concur therewith for reasons of their own?

The loss which will accrue on silk under the terms which the Silk Guild now attempts to exact from the buyers will not fall upon the Yokohama agents who have orders to execute, but solely and entirely upon their friends, who will therefore have good reasons for believing that they have been sacrificed inconsiderately and upon insufficient grounds.

I am,

Sir,

Your obedient servant,

J. M. JAQUEMOT.

Yokohama, October 27, 1873.

#### THE LOSS OF THE P. M. S. S. Co.'s STEAMER *ARIEL*.

THE following narrative by a passenger on board the *Ariel* at the time of her recent loss, will be read with interest:—

TO THE EDITOR OF THE *Japan Mail*.

Yedo, 31st September, 1873.

SIR,—I telegraphed to you this evening on my arrival here at half-past six o'clock, that the *Ariel* struck on a sunken reef at dead low water at Toyoma Iwasaki Ken at half-past 9 o'clock on Monday night. Every one was saved, also the mail bag and ship's money.

After leaving Yokohama on Sunday afternoon we had fine weather, and everything on board went like clock-work. On Tuesday evening soundings had just been taken and the Captain had turned in, when the vessel appeared to graze a reef. The engineer on watch observed that the boilers appeared to rise and I thought, by the noise, the engine had broken down. We were soon undeceived as we felt her, so to speak, under our feet crunching over the top of a reef. Steam was kept up and engine going until she suddenly came to a stand, when rockets and blue lights were fired. She then rocked to and fro, and in a very short time the stern began to sink. The Captain then called the officers to stand by the boats, see running gear all right, and mail bag put in the life boat, and so soon as all had been provided with life preservers, and as the ship was fast filling, the Captain gave orders to all the officers to lower the boats and all hands to take to them, which was done in the most perfect order, and apparently not a moment was lost. When the boat I was in had cleared the ship the stern was on a level with the water. The boats by the Captain's orders lay-to within call at a safe distance, and the Captain left when all were safe, and nothing more could be done. The Captain then ordered all boats to make the best of their way ashore, which was done accordingly, and in a short time a large fire was lighted by the natives on the beach. The boats all made for the fire, and by the reflection of the light we steered between several large rocks, and before long all were safely landed. The Captain and several of the officers and men hired large fishing boats, well manned, and at once made for the wreck. On their arrival the danger was so great that the Boats would not venture near until they were made to do so, and the only means of getting on board was by a rope. Everything that could be laid hold of in the fore cabin berths was at once secured and thrown into the fishing boats. By this time the water had covered the vessel nearly all but the bows and fore cabins, as the men had to swim to cut down some meat which hung on the port side near the paddle box. She had by this time taken a list to that side. So soon as everything that could be secured was safe, the Captain

and crew made for the shore and had all the things carefully secured. Before break of day the Captain and part of crew must have been alongside, as we were all up a little after six o'clock when he had returned and pronounced her a total wreck as the sea was going over her and only one mast faintly visible, and before we left, she seemed to have drifted closer in shore as there is a great rise and fall of the tide. She then either appeared to have broken her back or parted, as we saw a large part of her floating seawards. By the glass we could not make out what part of the vessel it was; it might have been the hurricane deck or the stern half of the ship, but the distance was so great that one could not make out what part of her it was. At break of day she had apparently been on the top of the reef, but after she seemed to part. The fore part seemed to settle down in deep water. As she did not rise again we could not tell whether it was the main or fore mast that was visible; but I think it must have been the fore mast from her previous position, and when we left nothing was visible but the mast a little below the top-mast.

In conclusion I have only to remark that not the slightest blame can be attached to the Captain or any of the crew. Of this no one can speak better than I can as I was on deck nearly all the time from leaving port to the time of the misfortune. From the great rise and fall of the tide, it being dead low water and the land immediately opposite being very high, and coupled with the fishermen's observations, I have no doubt the largest vessel afloat at almost any other time would have gone safely over the reef, and no doubt many have done so, and if the *Ariel* had drawn less water we might also have gone over it. From the great rocking of the vessel the reef must have been pointed and in very deep water, as when she began to fill aft she began to sink fast, and was almost upright, fast I should think near the fore mast, from her position, and the rise of the water before we left her. Nearly all the time I was on board the Captain appeared to be night and day on the deck, on the two nights Sunday and Monday I don't think he turned in, as I several times walked by the cabin or chart room under the wheel, and he was reclining with his clothes on in a chair. The look-out was properly kept and the watches regularly relieved as aforesaid, soundings had barely been taken and the Captain retired when the misfortune took place.

The conduct of Captain and men was admirable: words cannot describe it. The Captain not only did his duty by waiting by the vessel until all men were saved, and when it was madness even then to have remained as she might have heeled over into deep water in a moment, and the Captain going off a second time was certainly beyond his duty to have boarded her, as she might have rolled over and engulfed those who ventured on board. A kinder and braver man never commanded a vessel, and if she had been a man-of-war orders in that trying hour could not have been more punctually obeyed. There was not the least selfish feeling as no one appeared to have saved a single thing. Everything was left to secure life-preservers and many were only half-clad. All happened in far less time than I have taken to write this.

\* \* \* \* \*

I met with the greatest kindness and civility all the way, and the Japanese Government need to have no fears in opening the country to foreigners, if foreigners only treat Japanese as they would be treated and as they treat each other. There is no place in the world where it would be more pleasant to travel, this I can say from a six years residence. A good part of the time I have travelled in Nagasaki, Simonosaki, Kujito, Nara, Bancho, this district and other country places where the Government officials don't interfere, I mean at any distance from the open ports.

Yours faithfully,

N. McLEOD.

Mr. DE LONG leaves Japan by this opportunity after a residence of four years among us, during which time he has gained the goodwill and esteem of the Japanese Government and of a large circle of acquaintance.

## CLAIMS AGAINST THE OLD HAN.

Judge HANNEN and Mr. TAMONO, Commissioners.

Oct. 23, 1873.

BLAKISTON v. HIROSAKI HAN.

The following is a disputed claim, amounting to \$36,000, for cash advances and merchandise alleged to have been furnished to agents of Hiroasaki Han, in the year 1870, together with interest thereon, by Captain Blakiston, of Hakodate.

Mr. Dickens appeared for the plaintiff; and Mr. Hill for Kitamura Yosikadz, representing the Japanese Government as defendant.

Counsel for the plaintiff, on behalf of his client, here requested that a written statement, which, he handed in to the Commission, might be accepted as evidence in lieu of verbal testimony, owing to urgent private affairs of said plaintiff.

Captain Blakiston examined by Mr. Dickens, declared: The document handed in is a true statement in my case, so far as relates to matters within my personal knowledge, and to the best of my knowledge and belief. A translation of the original contract was made by the interpreter employed at the Saibansho at Hakodate. The advance-money, interest, and loss of market was computed at 15,000 ryo. This was not done at my suggestion, but by the wish of the other parties to the contract. Exhibit 12, attached to my statement, is a note stamped by the Government, and now in circulation in Awomori Ken. [Note produced, dated 11th of Meiji.] These are the original documents, copies of which are attached to my statement already handed in.

Cross-examined for the defence, by Mr. Hill, witness stated: The document marked 12, is the promissory note stamped by Emamura Kozaimon and others, issued previous to the change of the Han into a Ken, subsequently stamped by the Ken and now in circulation in the Awomori Ken. I cannot say what the date corresponds to according to European system. At the time the contract was entered into Emamura Kozaimon was, I believe, at Tsugaru. When I received it, all the stamps now on it were affixed. The seal which is on the document is that of Kozaimon's firm, I think. Have had previous dealings with Emamura Kozaimon. The firm is sometimes called Ontsuya. I cannot say whether there is a separate seal for the firm apart from each individual or not. Kozaimon's firm was the Yotachi, of the Tsugaru Han. The duties, I believe, of the Yotachi, consisted in selling the produce of the Han, and purchasing their supplies, as well as holding their money. I cannot say when the Han assumed its commercial agency, nor can I say as to when it was taken away. The only proof I have of Kimbei's authority to act for Kozaimon was the assertion of Yagoro and Tsugaru Yas-Yoski, the Hakodate agent of Kozaimon's firm. I did not think it necessary to ask for any proof of the agency of Tsugaru-ya, the general recognition, I thought, sufficient. I supposed Madsuya Hayata to be the head of the mercantile corporation, which was separate from the Yotachi. The first contract never was performed. The second one [Document No. 3.] I consider as forfeit for non-fulfilment of the first. I don't know what office Miura Tagen held. He had conducted business for the Han, and contracted for rice on behalf of the Han. This contract was unfulfilled, but the balance unperformed has since been paid by Government. There was a contract entered into prior to the present claim, which has also been paid by the Government. The document you produce appears to be the one Ichida Oye proposed to make with me. I did not advance \$10,000 on this one. It was advanced on the one handed in consequent on my receiving the three documents, marked Nos. 8, 9, 10. Yamadera Gonji was sent up by me to notify each junk-load of rice as it arrived. The sugar mentioned in document No. 10, was an advance on the document.

The Court here adjourned to 2 p. m.

Cross-examination resumed: At the time I received documents 9 and 10, I imagined the foot-note writing by Ichida Oye, to be a guarantee that the Han would find the rice. I cannot say from whom I received document No. 8. Documents Nos. 8, 9, and 10, were received by me all within a few days. I do not think that I had advanced the 7,500 ryo mentioned in document No. 9 before I received document No. 8. The \$10,000 were handed to Ichida according to contract. I trusted him fully, and so did not have an accurate translation made of the postscript which he wrote on documents Nos. 8 and 10. There was no distinct agreement that any sum beyond 7,500 ryo should be advanced by me. They tried to get as much as they could, and I allowed them to have sugar and some other goods for which I have no receipt. When

document B was handed to me, the seals were not cancelled. This may have been done afterwards. The 1,850 bags came across in junks, and were weighed out by one Yamagiya Tokiochi. The remainder of the goods which Gonji took with him was arranged for after document A was handed to me. I saw little or nothing of Gonji after his return. I believed him to be in league with others to swindle me or the Japanese Government. I do not know where the title deeds mentioned in documents Nos. 4 and 5 now are. I received these latter from Miura Tagen.

This witness' evidence closed the case for the plaintiff, Mr. Dickens informing the Court that he had no other evidence to produce nor any re-examination to make.

Miura Tagen, cautioned to speak the truth, examined by Mr. Hill for the defence, stated. The document you produce I saw about the 3rd month of the 4th year of Meiji. It is one to which I attached my seal. My object in making the postscript was to compel its being carried out. Previous to this, I was captain of a company of infantry. I belonged to the Kroshe Han. This was a contract for a loan of money. I also made a contract with Capt. Blakiston for rice. Document C I have seen before. I got possession of the title deeds of a house and godown as security for the postscript that I attached to the contract. I did not think there would be any harm in my attaching the postscript to the contract, on account of my being a *hinkyō* [retired into private life]. Indeed all the parties were agreeable, and aware of it.

Commission adjourned till to-morrow, at 9 a. m.

Oct. 24.

Miura, examined by Mr. Ono: I got document C when I countersigned the bonds for 15,000 ryo. [Document No. 3.] When I did so, Blakiston did not ask me what my status was. Blakiston said he would take back payment in either money or goods. When I mentioned this to Kozaimon, he pretended to know nothing of the affair. Finally he acknowledged that he was indebted. After many suggestions, it was at last arranged that Kozaimon should aid Blakiston in a rice transaction, so as to pay off the debt. The rice was to be purchased in Awomori Han, where it was cheap, and afterwards sold at a profit in Hakodate: Blakiston to find capital. Kozaimon gave a written contract. I saw it myself. It was made out between Ichida Oye and Blakiston for 18,000 bags (7,500 koku), to be handed over to Kozaimon; to be eventually made up to 40,000 bags. Blakiston was to pay himself out of the profits. This contract was never carried out. Why, I cannot say. Oye did not hand over the 7 500 koku to Kozaimon; but said he would do so when he should return to Hiroasaki. Document marked B is the one brought by Gonji to Awomori. It is a valid document in form.

Cross-examined by Mr. Dickens: I put my seal on the document to prevent an action from being brought, and to enable the two parties signing the bonds for 15,000 ryo to communicate with Kozaimon. The latter's not being able to pay, was quite an unexpected thing. I cannot say whether Kimbei knew that I was a *hinkyō*. The seal of such a one I take to be evidence. I only undertook to get others to pay. I attached my seal to the document because I believed Kozaimon to be Yotachi. I still hold the title deeds of the property above alluded to. The ground therein mentioned, measures 1,500 taubos. I cannot say when the seals on B were cancelled. I do not know that Ichida received 7,500 ryo on B, but I have heard so.

Court adjourned to 2 p. m.

Iwabutchi, cautioned, examined by Mr. Hill: In the spring of year before last, I was stationed at Yedo. In the spring of 1870, I was in the Hiroasaki Han, and Shosanji. Exhibit 12 is a current note of Hiroasaki Han. I know all the seals on it—the number is written; the date is printed by order of the Hiroasaki Han authorities. The seal on the back proves the note as authorized by the Han. I also recognise the other seal. At the time of the issue of the note, none of the Yotachi could be called the chief. Neither Chiji nor any other officer could enter into a contract, without the sanction of the Mikado's Government. Contract B was entered into subsequent to the order from the Government regarding the Hans making contracts with foreigners.

Cross-examined by Mr. Dickens, witness said: I knew Kozaimon failed. It was in the summer of 1870. Probably both failure and dismissal were entered in a journal of the Han; but since the change of the Han into Ken I don't know what has become of it.

Kozaimon, cautioned, examined by Mr. Hill: I know Blakiston, but nothing of Document No. 1. My seal is not on it, nor do I know anything of the others. I was in Hiroasaki at the time it was made out. My seal is on No. 12. I have used the same seal for the last thirty years. At the date of this case,

I was Yotachi. I recognize B. Saw it being drafted. I owed Blakiston \$15,000, which I offered to pay, in instalments. After this, the present contract was given to me to help to make up the deficit to 40,000 bags of rice.

Court adjourned till to-morrow, 9 a.m.

Oct. 25, 1873.

Kossimon, examination resumed. It was proposed to me by Yaninaga and Tokichiro to purchase 40,000 bags of rice, and ship it to Blakiston, who was to sell it, and, out of the profits, pay off the 15,000 rice which I owed him. Blakiston on his part agreed to it. This was in the 10th month Hiteiji. I bought 40,000 bags, and wrote to Yanidaga to that effect. There was a sum still due on the purchase of this rice. I had paid the bargain money, which was forfeited, as I could not carry out the contract. On the 40,000 bags, I paid 9,000 rice bargain money. When I went to Hakodate, I transferred the contract to Oye and Gonji. I received \$10,000, and some sugar. I recognise D, as it has my seal on it. I gave it to Itohida Oye. Besides the \$10,000 and sugar, I received Japanese quilts from Gonji, on the part of Blakiston,—some 12,00 of them, of which I returned 800.

Mr. Dickens objected to certain questions put to the witness, but the objection was overruled and the questions put. Counsel hereupon requested to have his objections noted, to which Commissioner Hannen agreed.

Mr. Tamono, however, dissented, remarking, among other matters, that Blakiston had broken one contract, now refuses to be examined on it, and would yet enforce another.

Kossimon continued; F is a contract for 40,000 bags of rice. The arrangement for advance of money to buy the rice was that I should receive \$10,000, sugar, and futons. \$13,000 was to be sent for every 10,000 bags bought. I notified purchase of rice, but no money came. Document H shows that I paid \$2,000 more to avoid forfeiture of the \$9,000. K is a receipt for 2,080 bags of rice given to Blakiston's agent. L is another receipt, showing the return of 1,800 futons.

Court here adjourned till Tuesday next, at 9 a.m.—*Japan Herald*.

#### IN H. B. M.'s PROVINCIAL COURT.

Before N. J. HANNEN, Esq., Acting-Assistant Judge.

October 27th, 1873.

Geo. B. Berrick vs. F. M. Jonas. Claim \$21 75 for a disputed account.

The plaintiff, sworn: stated that the price charged in his account against defendant was correct and produced his day book in proof. The account had been presented to defendant several times for payment, and no mention was ever made of the overcharge till the summons to this Court was served.

Defendant, sworn, disputed the amount of the account: there was an overcharge of \$2. Since receiving the summons he had gone more carefully through the account and discovered the error.

The Judge said as neither party produced any witnesses it was just one statement against the other, but as the plaintiff produced his books in proof of his assertion he should give judgment for him with costs.—*Japan Gazette*.

#### IN CHAMBERS.

Before N. J. HANNEN, Esq., Acting Assistant Judge.

Oct. 27, 1873.

Smith and Wynne, through their counsel, Mr. Ness moved that the defendants, Black and Wilkins, should be summoned, with a view of being examined touching their ability to pay the judgment debt in this case.

The motion was granted forthwith.—*Japan Herald*.

#### H. B. M.'s CONSULAR COURT,

Before RUSSELL ROBERTSON, Esq., Consul.

Oct. 28, 1873.

John Grumley, cook and steward on board the *Clausina*, was charged with being absent without leave.

On being asked what he had to say to the charge, he pleaded guilty.

J. C. Brown, mate, sworn, said that on Saturday afternoon, prisoner told him that the captain had given him permission to go ashore. He subsequently went on shore. It would be about five o'clock. Prisoner had remained absent from the vessel without leave ever since.

In reply to the Court, prisoner demurred to what the mate said, saying that he had only spoken to the second mate. For the rest, he acknowledged the offence.

Captain Rickaby stated that the present was the third offence of the kind prisoner had committed while in his service. He had reason for believing that, seeing that he had now no wages due to him, prisoner intended to desert from the ship.

The Court condemned the prisoner to three weeks' imprisonment, with hard labour; to be replaced on board, should the ship leave before the expiration of the term of imprisonment; and to forfeit two days' pay.—*Japan Herald*.

### Shipping Intelligence.

#### ARRIVALS.

Oct. 26, *Oregonian*, American steamer, Harris, 1,920, from Kobe &c. October 24th, General, to P. M. S. S. Co.

Oct. 26, *Alaska*, American steamer, Morse, 4,011, from San Francisco, October 1st, Mails and General, to P. M. S. S. Co.

Oct. 26, *Maud*, British steamer, Britton, 848, from Hiogo, 24th October, Rice, to Simon Evers & Co.

Oct. 28, *Parmentio*, British barque, Abbott, 389, from Hakodadi, General, to Captain.

Oct. 30, *Caroline*, German 3-masted schooner, Paulsen, 274, from Takow, October, 11th, Sugar, to Order.

Oct. 30, *Relief*, American Steamer, Corning, 795, from Kobe, Rice, P. M. S. S. Co.

Oct. 30, *Washi*, British Steamer, Coater, 221, from Kobe, Rice, Hudson, Malcolm & Co.

Oct. 31, *Burnside*, American barque, Pendergrace, 4,64, from Newcastle N. S. W. August 26th, Coal, to P. M. S. S. Co.

Nov. 1, *Great Republic*, American steamer, Howard, 4,250, from Hongkong, October 25th, Mails and General, to P. M. S. S. Co.

Nov. 1, *Zenobia*, British ship, Hutchins, 1,190, from Sydney N. S. W. September 15th, Coal, to Captain.

Nov. 1, *New York*, American steamer, Furber, 2,119, from Shanghai and Ports, October 25th, General, to P. M. S. S. Co.

#### DEPARTURES.

Oct. 26, *Ariel*, American steamer, Newell, 1,736, for Hakodate, General, despatched by P. M. S. S. Co.

Oct. 28, *Volga*, French steamer, Flambeau, 960, for Hongkong, Mails and General, despatched by M. M. Co.

Oct. 28, *Alaska*, American steamer, Morse, 4,011, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Oct. 28, *Iron Duke*, British Iron-clad, Captain W. Arthur, 3,800, for Kobe.

Oct. 28, *Salamis*, British despatch, Captain Littleton, 650, for Kobe.

Oct. 28, *Cadmus*, British corvette, Captain Whyte, 1,800, for Kobe.

Oct. 28, *Dwarf*, British gun-boat, Captain Bax, 464, for Kobe.

Oct. 28, *Elk*, British gun-boat, Captain Barnett, 460, for Kobe.

Oct. 29, *Solent*, British ship, Meldrum, 632, for Kobe, General, despatched by Cornes & Co.

Oct. 29, *Costa Rica*, American steamer, Williams, 1,917, for Shanghai and Ports, General, despatched by P. M. S. S. Co.

Oct. 30, *Medina*, British steamer, Shaw, 688, for Singapore, General, despatched by D. Sassoon, Sons & Co.

Nov. 1, *Garibaldi*, Italian frigate, Capt. A. De Santo, 8,000, for Sandwich Islands.

Nov. 1, *Gaucho*, British barque, Kirby, 337, for San Francisco, via Kobe, Ballast, despatched by E. C. Kirby & Co.

Nov. 1, *Jason*, British ship, Leslie, 877, for China, Ballast, despatched by Captain.

#### PASSENGERS.

Per American steamer *Ariel* for Hakodate.—Captain Blakiston, and 5 Japanese in the cabin, and 29 in the steerage.

Per American steamer *Oregonian*, from Shanghai.—Rev. V. C. Hart and servant, Mr. E. W. Hance and servant, Miss E. Dezzarett and servant, Mr. A. Mohlman and servant, and Mr. Müllmann. From Nagasaki.—Mr. W. P. Mangum, U.S.C. From Hiogo.—Mr. Daniel Turner, U. S. C., Dr. James Harris and servant, Dr. King, U.S.N., Mr. T. Brush and servant, Mr. Schaeffer and servant, nine Japanese Officers, and eighty two in the steerage.

Per American steamer *Alaska*, from San Francisco. For Yokohama.—E. W. Southworth, G. C. S. Southworth, M. S. Southworth, Lieut. Thos. G. Grove, U.S.N., Lieut. J. A. Challin, R.N., Madame Gistmayer, Lieut. Commr. Jas. G. Green, U.S.N., Lieut. Commr. W. R. Bridgeman, U.S.N., G. F. Verbeck, Ira H. Chapman, Mrs. L. E. Benton, H. Vogel, Rev. G. M. Dexter and wife, F. S. James, J. W. Walter, Mrs. G. E. Rice and two children, Mrs. Caroline Pfounds, Rev. J. H. Arthur and wife, M. Edulgee, and Max Kleener. For Shanghai.—M. M. Parkhurst, Miss Julie Waeling, G. G. Walbach, Miss D. M. Douwd, Dr. F. C. S. Sibbald, Tucker Daland, Mrs. M. T. Truce and child, W. M. Sibbald, Mrs. Alex. Winsor, W. Churchill, Lieut. J. R. Povat, R.N., Margareta Peterson Fred. Baller, C. H. Judd, wife and infant, Jacob Molliner and wife, Mary Jane Bowyer, C. W. Mitchell, and Henry Taylor. For Hongkong.—Edgar Berant, Rev. C. C. Baldwin, wife and children, Albert Mai, and 487 Chinese.

Per French steamer *Volga*, for Saigon.—M. Le Lerceau. For Hongkong.—Mr. Wood, and 1 Chinese. For Marseilles.—M. M. Bertoni, Imberti, Chiapelle, Maccarie, Ferreri, Bassolo, J. Butta, Mutti, De Christofori, E. Parravicino, H. Parravicino, Falco, F. Fondra, V. Fondra, Montabetti, Madame Huys, two children and

maid servant, D. Cossie, Gounelle, Licioni, Mademoiselle Charet, M. Bernaud, Caulet and Le Oustree.

Per American steamer *Costa Rica*, for Hiogo.—Rev. G. M. Dexter and wife, Mad. Gertmaya, Messrs. W. Wheeler, G. Duplaquet, C. J. Holders, L. Poland, D. Turner, U. S. N., Chas. Riddle, Mr. Godfrey and wife, Dr. Sluys, Mr. W. F. Driscoll, and 4 Japanese, in the cabin; 73 in the steerage. For Nagasaki.—Mr. J. H. Stevenson, U. S. N., and 7 Japanese, in the cabin, and 36 in the steerage. For Shanghai.—Mr. C. C. Baldwin and family, Mr. A. Mollman, Mr. T. Thomas and family, Mr. O. R. Barnes, Rev. Palladay, and 10 in the steerage.

Per American steamer *New York* from Shanghai and Ports. For Yokohama.—56 in the steerage. For San Francisco.—Mr. John Duncan, and 9 in the steerage. For New York.—S. W. Gauleson.

## CARGOES.

Per American steamer *Oregonian*, from Shanghai:—  
Treasure ..... \$1,201,300.  
Per French steamer *Volga*, for Hongkong:  
Silk ..... about 260 bales  
Per American steamer *New York* from Shanghai and Ports.  
Treasure ..... \$589,301.79.

## REPORTS.

The American steamer *Oregonian* reports left Shanghai, Oct. 18th at 9.26 a.m., arrived at Nagasaki, Oct. 20th, at 8.40 a.m.; left Nagasaki Oct. 21st, at 1 a.m., arrived at Hiogo Oct. 22nd, at 5.45 p.m.; left Hiogo Oct. 24th, at 6.38 p.m., arrived at Yokohama, Oct. 26th, at 7 a.m., experienced fine weather the entire trip.

The Pacific Mail Steamship Co.'s steamer *Alaska* reports left San Francisco, October 1st, at 12 a.m., with 19 bags, U. S. Mails, 40 passengers cabin, and 506 steerage, 4,812 pkgs. freight, 338 3/4 tons, and 85 packages Treasure, valued at \$260,386. Experienced light winds, and fair weather all the way over.

The British steamer *Maud* experienced strong northerly wind during the passage. The Captain reports having used during the voyage, some coal taken on board in London *Powell Dufferin* (Welsh), which turns out so bad, that it won't generate steam enough to drive the vessel more than half speed.

The British barque *Parmenio* Captain Abbott with sea weed, from Hakodate is now at anchor beyond the light vessel.

The British Ship *Tamerlane* went down to Yokoska yesterday.

The American barque *Burnside*, Captain Pendergrass, from Sydney, N. S. W. with Coal, is anchored down below.

The British steamer *Washi* reports: experienced very heavy weather during the passage. Yesterday morning at daybreak, about 20 miles beyond Rock Island a heavy sea broke on board, carrying away the Port quarter boat and davits, and washing the second mate overboard, but as he was not missed for at least a quarter of an hour afterwards, no attempt could be made to save him.

From observations at 9 A.M. daily, on the Bluff (100 feet above sea level), the mean reading of the barometer last month was 29.97 in.; the highest reading was 30.23 in. on the 29th; and the lowest 29.45 in. on the 3rd.

The mean temperature of the air was 60.1 degree.

The highest day temperature in the shade was 74.0 deg.; on the 1st and 20th, and the lowest night temperature 45.0 deg. on the 28th; The extreme range in the month was therefore 29.0 deg.

The difference between the mean dew point and the air temperature was 5.8 deg.

The mean degree of humidity of the air was .815; complete saturation being represented by 1.

The general direction of the wind during the month was Northerly.

Rain fell during the month to the amount of 7.73 in. There were 16 days on which no rain fell; the maximum fall in one day was 2.57 in. registered on the morning of the 30th.

CAMP, Yokohama, 31st October, 1873.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, NOVEMBER 1st, 1873.

(As our usual mail edition appears simultaneously with this we reproduce its special market report which will be found to embrace the commercial intelligence of the past ten days.)

Since the publication of our last fortnightly summary the following mail arrivals and departures have taken place. Arrivals: *Madras* from Hongkong on the 22nd ultimo; *Alaska* from San Francisco on the 26th ultimo, with the London advices to 5th and 10th September respectively. Departures in the same time have been *Bombay* for Hongkong on the 21st ultimo; *Japan* for San Francisco on the 22nd ultimo, and *Volga* for Hongkong on the 28th ultimo.

The *Gordon Castle* (s) and the *Medina* (s) have arrived from London via Chinese ports and the cargo of the O. S. N. Co. *Agamemnon* has been delivered here.

The shipments of Silk effected since our last amount to 324 bales, in which are included 61 bales of cocoons and waste: 2,483 cards of Silk-worms eggs have also been shipped.

As only ten days have elapsed since the departure of the last American Mail, and three of those days have been the holidays usual at the Autumnal Meeting, we have but little to report of our various markets. The import market has been affected by considerable speculative purchases to arrive, the advance in paper currency and the engrossments of the trade in Silk worms eggs, which, owing to the lateness of the season, it is found necessary to compress within a very limited space of time. The business has, therefore, been on a smaller scale than that reported in our last publication and no visible movement in prices may be recorded. Stocks, however, are not large and the condition of the market may be described, as regards most articles, as fairly healthy in this respect. The change in the Ministry has not produced the smallest effect upon trade.

**COTTON FABRICS.**—Since our last report a much smaller business has been done in *Shirtings* which have, however, in all cases maintained their highest rates and continue in fair demand. Some rather large bargains for arrival are spoken of, and it is probable that these operations will for a time cause an easier demand. Some little business has taken place in *Velvets*, some 800 pieces having changed hands—but lower rates have prevailed. A small transaction in *Taffachelass* may be noted at steady quotations. In *Turkey Red* rather more business has been done at quotations. Some small sales of *Cotton Italian Cloth* have been made at, we must conclude, utterly irremunerative rates.

**YARNS.**—Prices for Yarns have been moderately steady, 38/42 being saleable at a high figure from the shortness of stocks. The sales since our last publication exhibit a considerable falling off in amount.

**WOOLLENS AND WOOLLEN MIXTURES.**—The business of the past fortnight has been characterised by a weakness in demand and in price, and the merchants who devote their attention to these goods complain of the slenderness of their dealings.

**SUGAR.**—Business has been firm and during the closing week, the sales have been fully upon the basis of arrivals which have been moved off rapidly. These consist of 4,800 piculs Formosa, and the sales are as follow:—

4,500 piculs *Formosa*; 75 piculs *Chimpah*; 210 piculs *Empah*; 61 piculs *Kookfah*; 100 piculs *Koongfun*; 250 piculs *Dai Toong*. There is nothing doing in *Rice* which is quoted at \$1.70 to 1.80 per picul.

**IRON AND METALS.**—The state of the iron market may be reported as unchanged. *Bar* iron is dull of sale, but *nail rod* continues firm and stocks on hand are small and diminishing in amount. *Hoop, sheet* and other descriptions continue to be difficult to move off at quotations.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**SILK.**—We have to report a further advance of fully \$30 which has to some extent checked operations.

A few bales of fine sized Oshiu (native *filature*) have found buyers at a price reported to be \$720.

Settlements since the 22nd ultimo are 550 bales of Hanks and 50 of Oshiu.

A number of foreign houses having proposed to the native dealers to establish as a rule for the future an allowance of 1 per cent. on the net weight of Hanks as a compensation for dampness, the Japanese have declined to agree to their proposition. The establishment of a "conditioning house" at this port is among the probable contingencies.

**SILK-WORM'S EGGS.**—Total arrivals since the beginning of this season, are as follows:—

Joshui	...	...	...	...	...	...	...	...	...	184,540	Cards.
Koshiu	...	...	...	...	...	...	...	...	...	47,640	"
Bushui	...	...	...	...	...	...	...	...	...	145,720	"
Shinshui	...	...	...	...	...	...	...	...	...	433,010	"
Oshiu	...	...	...	...	...	...	...	...	...	235,700	"
Other sorts	...	...	...	...	...	...	...	...	...	86,480	"
Total...	...	...	...	...	...	...	...	...	...	1,083,090	Cards.

Total Settlements are estimated at 1,050,000 cards against 1,100,000 last year at the same date.

Prices for first-choice cards have receded 25 to 75 cents according to description, Sinchiu having fallen most on account of their abundance, and our lower quotations for each sort only apply to the refuse of the market.

We quote:

Oshiu.	...	...	...	...	\$2.00 to 3.00	Koshiu.	...	...	...	...	\$1.20 to 1.90
Sinchiu.	...	...	...	...	\$1.75 to 2.60	Goshiu and other sorts.	...	...	...	...	
Joshui and Bushui	...	...	...	...	\$1.50 to 2.25						

The above report only refers to the goods arrived at and sold in the open market. It is a matter of public notoriety that Silk-worm's eggs cards reserved by Government order for native consumption and bearing a distinct stamp have been smuggled into Yokohama and sold at a discount, in what quantity and at what prices is not exactly ascertained. It follows that the real importance of the settlements for this season can only be verified by the actual weight of shipments, and there is a probability of unusually late shipments *via* San Francisco and New York.

**TEA.**—Our Tea market for the past week has shewn great activity and settlements mount up to the large total of piculs 6,000; the demand continues still on Good Medium and Fine classes, which have been in fair supply, but many parcels already shew signs of deterioration in quality.

Our supplies again are coming in slowly and no accumulation of stocks is allowed in this place: it is impossible from native sources to arrive at anything like the probable total crop for this season, but there is no reason to count on a less total export from Yokohama for the Season 1873-74 than in past seasons although our export figures are decidedly short.

Our quotations are a little irregular. Most native merchants are firm, tho' a few are willing to realize somewhat under market rates; really desirable parcels, however, are firmly held, and the classes on which a concession is obtainable are "low fine" and inferior class "good Medium"; finest and choice classes are not pressed. The last P. M. Steamer took 237,387 lbs. Tea for San Francisco. The *Clausina* is nearly ready for sea, and will take, it is supposed, about 400,000 lbs. The *Tamerlane* is reported as being laid on for New York, but has not been publicly circulated.

Total Settlements since last American mail to date are about piculs 5,500.

## MISCELLANEOUS.

**KEATING'S COUGH LOZENGES.**

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

**KEATING'S BON BONS OR WORM TABLETS**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all Chemists.

CAUTION.—The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

THOMAS KEATING, London  
EXPORT CHEMIST AND DRUGGIST.Indents for pure Drugs and Chemicals  
carefully executed.

Yokohama, August 9, 1873.

**THE GREATEST WONDER OF MODERN TIMES!****HOLLOWAY'S PILLS.**

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

**THE GREAT CURE ALL!****HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

**THE "MOFUSSIL GUARDIAN,"**

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

## BIRTH.

On the 5th instant, at Tamar Cottage, Acton, the wife of METCALFE DALE, Esq., 10th Regiment, of a son.

## DIED.

On Sunday night, November 2nd, of Pneumonia, BAILEY DONZ, Esq. M.D., aged 28 years.

## Notes of the Week.

THE following account by an eyewitness of the accident which befell the Empress on Friday evening last, may be relied on as trustworthy.

The occurrence has been a source of great and general regret among the foreign residents.

The Empress, accompanied by her Mother and a lady of the Household, was driving out to pay a visit in a close carriage, drawn by two foreign greys. Coming down an acclivity near the Kobusho the pole-strap gave way, and the horses, startled and with their heads in the air, dashed off. The coachman lost all command, and the horses, carriage and occupants of it were all thrown over an embankment into some deep water which forms the reservoir for the silk-mill of the Kobusho. Fortunately, the carriage, being closed, did not fill with water, and the three ladies were soon extricated with slight injuries only. One of the horses, the one which was under the pole, was drowned, the other is not much hurt, nor is the coachman, but a *betto* is said to be seriously injured. The Empress and the ladies were taken to the Kobusho where wraps and a fresh carriage were procured for them, and from thence they were conveyed home.

THE following is the official list of the recent changes in the Cabinet, and a comparison of it with that given in our issue of last week will show how nearly accurate was the information we then made public.

The following have sent in their resignations, which have been accepted.

Gôtd..... Sangi = Councillor of State.

Etagaki ..... do. do.

Etô..... do. do.

Soyejima... do. do.

Saigo has resigned his office of Sanji, but retains his appointment of General.

Okuma is Sanji, with the portfolio of Finance.

Oki is Sanji with portfolio of Education.

Terashima is Sanji with the portfolio of Foreign Affairs.

Katsu Awa is Sanji with the portfolio of the Admiralty.

Itô is Sanji with the portfolio of Public Works.

It is impossible not to regret the retirement of Soyôjima from the Cabinet at this moment, whatever may be the abilities of his successor—and these are highly spoken of. The late Foreign Minister is a man of very liberal views, he thoroughly understands the foreign question, and he has the credit of being very true to any engagement he makes or promise he enters into. He has certainly gained the confidence of the Foreign Ministers, and his experience and knowledge are so ample that he can ill be spared from the Cabinet during the discussions which the approaching revision of the Treaties must produce.

We have elsewhere treated the question of the late changes in the Cabinet, and shewn that there is reason to look upon them rather as the fruits of a wise and truly far-sighted than a retrogressive and illiberal policy. It is conceivable that the late Foreign Minister may have urged upon his colleagues measures in regard to foreign affairs of the prudence of which

their recent experience has made them somewhat doubtful, but it is on that very account that we are most disposed to regret his absence from the Cabinet at this moment, though his secession may have been unavoidable under the circumstances which brought about the late crisis.

THE death, at the early age of 28, of Dr. Bayly Done, has made a gap in the medical staff of this place the extent of which can only be appreciated by those who knew him as intimately as the writer of these lines. Endowed by nature with a clear mental vision the acuteness of which had been increased by patient and intelligent study, he possessed in a high degree that ponderating power, if we may so call it, which estimates at its true weight and value the facts presented or the arguments addressed to it. At an age when many men have either adopted conventional opinions from defect of the power of forming them for themselves, or are cast about from side to side as the latest theory appeals to them, Dr. Done had so adjusted the balance of his mind that every new fact or opinion was weighed there with a singular justness and impartiality. He also possessed the somewhat rare faculty of seeing distant relationships between facts or phenomena wholly unsuspected by less acute observers, and when some new fact or generalization was brought to his notice he affiliated it with singular rapidity, and generally with perfect accuracy, with recognized conclusions at first sight wholly unrelated to it. His restless and enquiring mind was deeply devoted to the pursuit of truth, and if the difficulty of finding it, or even the direction in which it lay, too often repulsed him with chilling effect, this pursuit was as brave as it was worthily sustained.

He was deeply attached to his profession, jealous of its honour, and ever alive to its high duties in the service of humanity.

Captain Lane has addressed the following acknowledgement of the hospitable attention of the Japanese, along the line of route, to the shipwrecked passengers, officers and crew of the steamer *Ariel*.

Nov. 7th, 1873.

TO THE GOVERNOR OF KANAGAWA KEN,

SIR,—Allow me to tender the sincere thanks of this Agency, for and on behalf of the P. M. S. S. Co., for the kindness shown and tendered to the Captain, crew, and passengers of the late steamship *Ariel*, wrecked the 27th ult. off Toyama Point.

The Captain with his ship's company having reached here safely overland, speak in the highest terms of the uniform kind treatment, and attention shown them from the people along the route they came from the scene of disaster.

Again accept our thanks for the above attention.

I have the honour to be, Respectfully yours,

GEO. LANE,  
Agent.

AN excellent movement has lately been set on foot here for the establishment of a Sailor's Home, and we hope it may meet with all the support it merits. The position of sailors arriving at a port destitute of such an institution, is deplorable. They are driven to haunts which are enough to drag down men far better guarded against the dangers which there beset them than sailors usually are or can be expected to be. As a letter elsewhere to be found in our columns observes, the officers of ships have clubs and the houses of friends or acquaintances ashore to which they can resort. The sailor is driven to the worst houses and dens in the place; who can wonder that he does not improve under this regimen?

A noticeable feature in the local scheme alluded to is that the sailors themselves have been foremost movers in and supporters of it.

MONDAY last being the twenty-third anniversary of the Mikado's birthday, was celebrated with the usual salutes, rejoicings and banquets. The Foreign Ministers were entertained at Hamagoten, and the Governor of Kanagawa presided over a dinner given to the Foreign Consuls at the Saibansho.

A translation will be found elsewhere in our columns of the pamphlet written by Kido and which is said to have been circulated to an enormous extent throughout the country, although we cannot guarantee this latter statement.

The paper reached us too late in the week to permit of our commenting upon it in this issue, so that we must reserve our review of it for next Saturday.

ECLIPSE OF THE MOON.—A total eclipse of the moon occurred on Tuesday night. At 11.50 P.M. the obscuration commenced and at 12.30 the orb could only be observed dimly appearing through the fast drifting clouds and affording only a pale salmon-coloured light. At 12.45 its obscuration was complete. The stars were at the time shining brilliantly, and though the scud came up rapidly from the south-west, little, if any wind was stirring. At 20 minutes to 2 o'clock the moon again shone out, exhibiting a faint light, which at about 2.15 p.m. brightened somewhat, a small portion first appearing and gradually its whole surface. At half-past three o'clock rain fell.

The moon was about full. The eclipse was only partially visible at Greenwich. Several brilliant meteors were observed both before and after the eclipse.

On the 19th instant, there will be partial eclipse of the sun. It will be invisible at Greenwich, but may possibly be observed here.

In regard to the reported disaffection among the military classes, we can only say that a foreign officer, high in the service of the Government and in intimate connection with the Army, informed us yesterday afternoon of the entire untruth of these reports, for which, he said, not the slightest foundation existed.

News has reached Yokohama that the *Columbine* a Japanese owned steamer has been lost near Oosima. The report alleges that the European captain is not responsible as the charge of the vessel was taken out of his hands.

Corresponding week last year.

Number of Passengers 24,671      Amount \$8,464.13

#### FIRST FRUITS.

THE return of the Embassy has borne early fruit, and the late changes in the Cabinet afford evidence of the fact. It was not to be expected that the experience gained by such men as IWAKURA and KIDO in a tour round the world, during which they had ample opportunities of seeing the outlines and elevation, the forms and proportions, of that civilization which awaited them in the West, would be without ample results to their minds, nor can it be doubted that such satisfaction as they may previously have felt in regard to the great movement which this country is painfully endeavouring to make, has been largely modified by their recent experiences and the reflections which those experiences must have abundantly suggested. Their return to Japan at this moment has enabled them to interpose their riper judgment between the country and some of its more questionable ambitions, as well as to pronounce authoritatively upon the wisdom of those steps it is taking in its onward movement, the relation they bear to the enormous expense they have entailed, the prudence of continuing, or the necessity for revising them. And, to our mind, the real meaning of these late Ministerial changes is that a halt has been called in order to review the actual state of affairs, the numbers and power of the force, the nature of the country into which the advance has been made, the prudence of further advance, the necessity for making good the ground already gained, and the means available for continuing the march when this has been done. When we allowed last week that the Korean question,—to which we might have added the discussion upon the Formosan outrages,—had been the proximate causes of the changes in the Cabinet, we made almost a larger concession to our desire to redress an unintentional injury than perhaps the actual circumstances of the case demanded. We are not at this moment by any means persuaded that the translations given to the world purporting to be the actual messages sent by the Government of Corea to Japan, correctly represented the facts of the case, though we should have been content to leave our acknowledgement in the form in which it was made but for the ungracious manner in which our concession was accepted. We are inclined to think that whatever may have been the share of these questions in bringing about the recent changes, they are still more due to the causes we have above assigned, and it is even possible that steps of a liberal nature contemplated by at least one of the members of the Government who has retired from it,—steps to which he was pledged and from which he refused to retreat,—have had at least as much to do with the changes as the questions of the Korean and Formosan policy. But the danger of asserting or strongly insisting on any such facts or opinions in this country should never be forgotten. It may, indeed, be as safe to contradict the assertion that republicanism exists as a force here, as to deny the existence in Japan of a formidable party of Plymouth brethren or Quakers, for the impossible may always be safely denied, though the necessity for the act may reasonably be doubted. But, if we are correct in our surmise that this halt has been called—that orders have been given to strike a balance for the purpose of accurately determining the relations of the money expended to the results obtained from it—can it be denied that this is a truly wise policy, or asserted that the necessity for it was not abundantly manifest? While we have never swerved from our conviction that the efforts being made by the country have a sound basis of solid motive and intention, we have as persistently pointed out the errors which have attended those efforts, and the dan-

gers incidental to the foolish flattery they have elicited. If ever the more practical of the two greatest works produced by the English imagination of the seventeenth century shall come to be translated into the Japanese language, the story which tells how the pilgrims were beguiled and entangled in the net of the Flatterer will have its moral pointed by the events of this year, nor will the more thoughtful readers of the parable fail to recollect that escape from his toils was only purchased at the expense of a chastisement which, though administered in love, was not the less sore on that account. The country has listened to too much advice and taken too little. It has not sufficiently discriminated between what was sound and what unsound. It has been deluded by shallow, fluent and effusive gabble, instead of listening to bitter truth. It has imagined that a royal road would lead it abreast of the nations who have not only been centuries toiling along the path on which they have travelled, but have cleared every inch of it for themselves with infinite labour, and have transmitted to successive generations the inheritance of an ever increasing moral and intellectual force adapted to the exigencies of the effort. It would be cruel as well as idle to reproach the Japanese for follies which would appear to be as much the results of a law of nature as the inexperience of youth and the errors to which it gives rise. Nations, as little as individuals, seem to be able to gain their experience without the heavy payment nature exacts for it. The time comes when, if there is to be any worthy future, the halt must be called, the review made, the books balanced, and the fresh start taken. There is nothing new in all this. Friends need not fear, nor enemies rejoice. The pace has simply proved too great, and there have been mistakes made as regards the road. It is true wisdom to pull up, acknowledge it all, and take a truer direction, at less speed, for the future.

But, above all things, let us be sure that the experience so bought is really to be turned to account. It is a costly article, and stands at a high figure in the books of this nation. Nor, if report speaks truly, can it be an unpopular one with many of those who have been sent to market for it, as their percentages on the outlay have contributed not a little to their private advantage. It can never go well with this country until the idea of high office is absolutely and entirely dissociated from the idea of turning it into gain by means of the power which it confers. No commercial legislation will ever be sound so long as Ministers and Governors are partners in commercial houses, whether native or foreign, or derive indirect private advantages from the establishment or perpetuation of guilds or corporations or commercial enterprises. At whatever cost, the men who are now guiding the affairs of this Empire must be brought to see this, and if, as we think, its future welfare and prosperity are to be secured and maintained by such successful commercial legislation—we do not mean by these alone, but by these among others—the time has come for putting the axe to the root of all such ideas as conflict with this view. If men wish to make money, in Heaven's name let them go and do it; but not while in office. The statesman's aim is one thing, the merchant's another; and every instinct we possess, or tradition on which we have been nourished, rebels against the union of the two occupations in one person. We shall not be far wrong if we state our belief that one of the gravest difficulties of the present moment is the financial difficulty, and this can only be surmounted by a retrenchment of the expenditure caused by the costly projects of the few last years, and by that wise

legislation in regard to commercial and industrial affairs which lies at the root of all our hopes of future prosperity. But no views in this direction, however sound, are likely to benefit the country, so long as they are liable to constant deflection by the impure ambitions of men in high office. One day a Silk Guild is found bolstering up all kinds of obstructive regulations, because a local official is identified with it; at another time the whole interests of a scheme of colonization are frustrated by an expenditure which becomes intolerable, and yet only a fraction of which is devoted to its intended purpose; while another day some great contract is awarded to the man who most liberally rewards the officer who has the giving of it. If the Heads of the Embassy just returned are in earnest about the future let them look to these things, and see whether the loss of power between what money has done and money can do has not lain in this direction. There is room enough for hope. There is an abundance of vitality in the nation, of vigour, of amiable disposition, of willingness to be governed, of intelligence, and, in some sense, of vigour. But all these will be of no avail unless well directed, and unless their fruits are husbanded and made reproductive, instead of being squandered.

So read your Bible, Sir, and mind your purse,  
And thank your stars that matters are not worse.

No great harm has been done so far; though much effort has been misdirected, and much money has been misspent. The solid intention is present and real, and much must be forgiven to this. For the rest, a severer code of ethics among the official class, and a sleepless watchfulness in the Finance Minister, will do much towards restoring order and giving a confidence to the holders of the Japan Loan which, if they are wise, will be rather increased than diminished by the recent crisis.

But, it must be added in conclusion, though it is quite wise and proper that this halt should be called as regards the internal policy of the country, foreigners would learn with the gravest dissatisfaction and disappointment that a retrogressive and illiberal course in its external policy was contemplated. It is not as if large, dangerous or one-sided concessions had been made to them, outweighing the legitimate rights which the country ought in justice to herself to conserve. Nothing of this kind has been done, and foreigners have a perfectly legitimate right to expect concessions in the revised treaties which will benefit them and at the same time advance the interests of the country. The Japanese must be perfectly well aware of the solid grounds on which the Foreign Powers have refused to place their subjects or citizens under native jurisdiction, and must have learnt to acquiesce in this determination. But this is no reason for delaying the opening of the country under prudent regulations and with properly devised securities. Any disappointment of the hopes in this direction which foreigners have cherished, quite as much as a matter of justice and amicable reciprocity as of legitimate expectation, will assuredly be met with strong expressions of displeasure, and resented as an unfriendly and ungrateful return for the cordial reception of the Japanese by all the Courts and nations of the West. We hope sincerely that no such cause of disappointment will arise, and that the friendly feelings towards the Government of this country which, in spite of some present coldness, are generally entertained by the Governments of the other hemisphere, may receive no such check as that which we most confidently predict must arise from any resolution on the part of Japan to draw the cord of her ancient exclusiveness more tightly than friendship, justice, and sound policy would dictate.

# DISCOURSE OF KIDO, COUNCILLOR OF STATE, AFTER HIS RETURN TO JAPAN.

I, Takayoshi, have always been filled with fear at the thought that I, an unlearned man and of inferior capacity, have presumed to take a share in the conduct of affairs, and I am sensible that I have in many ways failed to discharge aright the diplomatic duties imposed upon me by my late appointment as Envoy to the States of Europe and America. I have not succeeded in fulfilling the charge contained in the full powers given me by my Government, nor, on the other hand, have I been able to satisfy the expectations of the people. For this I deserve no small blame.

In the course of my travels, however, while observing the forms of Government and the civilizations of the various countries, I have noted the causes of the modifications which they have undergone, and taking into account the points of resemblance and difference which are owing to likeness or unlikeness of national customs and character, I went on to mark the analogies with the condition of our country before and after the revolution and maturely to weigh the advantages and disadvantages of the measures by which these modifications have been brought about. This inquiry has convinced me that the history of all countries, great or small, enlightened or unenlightened, proves that the inquiry in to the causes of their conservation or downfall resolves itself into the question of the state of vigour or decay, and the merits or faults, of their laws and constitutions. No matter how extensive their territory may be or how numerous their subjects, if a due control is not exercised over them by means of the laws and constitution, one man will basely follow his own selfish ends, while another will presumptuously turn right to wrong and so the Government will swarm with parasites and place-hunters. In such a case although an outward semblance of prosperity, power, and enlightenment may be maintained, the foundations of the country have been sapped and the evil will finally become past remedy.

The Chinese saying, "We have before us the example of the Shou dynasty," may be applied to the downfall of the country of Poland, in Europe. When it was free and independent, Poland had a wide territory and a large population. It was not that her kings were tyrants or her officials corrupt; the tendencies of the age brought on changes which rendered it impossible for the constitution of her government to maintain its integrity. One was thoroughly convinced of his own wisdom and styled himself a sage, another, relying on himself, assumed to be a clever man, and each refused to be guided by the other. The nobles and rich, some bent on selfish gain, others turning right into wrong, by their strife and jarring reduced the country to a state bordering on anarchy. The distress to which the people were brought was too painful to describe: what wonder that there was no one who did not look round him for some means of preventing himself from starving! The whole country therefore rose in tumult and wreaked its vengeance on the rich and nobles, and the disorder spread as far as the neighbouring countries of Russia, Prussia, and Austria, so that at last there was hardly one of the people who remained peaceably pursuing his own occupation. The three countries could no longer stand by unconcerned. They assembled an army, and having chastised the remaining robbers, divided the country into three parts, each uniting one to its own territory. Whom can the people of the ruined country blame for this, or whom can they hate! The essence of independence their country never had, nor did they themselves ever enjoy any original rights as citizens. When I was travelling in a railway carriage from Prussia to Russia, one morning at dawn my dreams were suddenly broken by the melancholy notes of a flute. I got up and opened the window. I was in Poland, and the flute player was a poor native who was begging copper coins from the passengers. This incident carried my mind back to the days of Poland's greatness, and it was long before I was able to restrain my tears. Alas! what country can escape the same fate if it does not maintain its constitution and preserve the integrity of its laws. As the turning point between prosperity and decay, between safety and destruction, is so critical, I felt compelled to note down this example so as to submit it for the opinion of my wise and enlightened readers.

A single rod, even though a stout one, may be broken by a young child, but if ten rods, though weak ones, are made into a bundle, they cannot be broken by a full grown man. They will even maintain a weight of a thousand pounds without breaking.

In the same manner, if a country is divided among a multitude of petty rulers, each one having full authority in his own district, the lines of policy are multiplied, inasmuch as each prince will seek his own advantage and devise schemes for his own gain. Under such a system the national strength is dissipated, and although the fellow rulers may know each other's relative strength, how will they stand in comparison with foreign nations? How could they ever withstand a powerful enemy whose forces were harmoniously united? But if, on the contrary, one sovereign can exercise control over the numberless petty rulers if he maintains one national line of policy and balances the gains of one province with the losses of another, —if he thus exercises supreme control,—though his territory may not be large or his people numerous, they will be able to protect themselves against the insults of their neighbours. This is a principle founded in nature, and is now a days a commonplace with the powerful nations of the five continents.

Not many years ago our own country passed through a revolution which was demanded by the altered tendencies of the age, and during it multitudes of the people were deprived of their occupations and fell into great distress. We have also had to lament the campaigns of Kiôto and the North, when Japan was forced, as it were, to sit in dust and ashes. I give as an example the misfortunes which befel one family. The father sacrificed his life for his country at the castle of Kiôto, while his son discharged the debt of gratitude he owed his lord by laying down his life on some battle field in the North. Even yet, when I recall to mind those days, a cold sweat breaks out over me. But the misfortunes of one family were mere private griefs: the crisis in the State was a public matter and demanded our most serious concern. It was no time for indulgence in private sorrow. The whole nation, therefore, spared neither pains nor labour, and so it became at last possible to lay the first foundations of our constitution. It thereupon followed that in reforming the old system of rule there were none of those things which catch the eyes and ears of the people which were not changed from their ancient customary form. In some this engendered suspicion, others tried to stand aloof, and it almost seemed as if there was no one who knew whither the Imperial purpose really tended. But how could it be supposed that these measures of the Government proceeded from a mere idle pleasure in changing the old system of rule? The truth was that there was no change made which had not become unavoidable, chiefly owing to the internal condition of the country, but also, though in a less degree, to our relations with foreign countries. The object of them was to promote the wealth and power of the nation, to spread enlightenment, and to secure to every one a peaceful life in his own sphere.

Hence it was thought advisable, so early as the spring of 1868 when the northern provinces were still unsubdued, to summon together at the castle of Kiôto all the officials and nobles of the Empire. The Emperor then prayed to the gods of Heaven and Earth and pronounced an oath containing five clauses, which was thereupon published throughout the Empire, removing all doubts as to the objects the Emperor had in view, and guiding the ideas of the people in one fixed direction. The heading of this oath contains the following expression:—"By this oath we set up as our aim the establishment of the national weal on a broad basis and the framing of a constitution and laws." This led at last to granting the petitions for leave to restore the fiefs to the Emperor, which occasioned the abolition of the Daimiôs and the concentration of the dissipated national strength. Is not all this consonant with that common-place argument of the powerful countries of the five great continents? And if this be so, then surely we must consider those five clauses as the foundation of our constitution. Now the constitution is a thing which sets on a firm basis the weal of the entire nation, which prevents officials from taking unauthorized steps merely on their own judgment, and which

by placing under one control all the business of administration, renders it necessary that all measures are conformable to it. Is there at the present day any subject of the Empire who does not gratefully acknowledge its profound and far-sighted policy and admire the soundness of the Emperor's views.

But in enlightened countries, though there may be a sovereign, still he does not hold sway in an arbitrary fashion. The people of the whole country give expression to their united and harmonious wishes, and the business of the State is arranged accordingly, a department (styled the government) being charged with the execution of their judgments, and officials appointed to transact business. For this reason all who hold office are faithful to the wishes of the whole nation and serve their country under a deep sense of responsibility, so that even in extraordinary crises, they take no arbitrary step which is unauthorized by the unanimous consent of the nation. The strictness of the constitution of these governments is such as I have just described, but as an additional check upon illegal acts, the people have officers for discussion (members of parliament) whose duty is to sift everything that is done and to check arbitrary proceedings on the part of officials. In this way a very admirable form of government is produced. But if the people are still insufficiently enlightened, it becomes necessary, at least for a time, that the Sovereign should by his superior discernment anticipate their unanimous wishes and act for them in arranging the affairs of State and in entrusting to officials the execution of their wishes. By this means he will gradually lead them forward in the path of enlightenment. Such a course is consonant with natural principles, and I am inclined to believe that upon this idea was founded the thought of the Emperor when he inaugurated by an oath his energetic policy. My belief is that although Japan has not yet reached that stage where everything is submitted for the sanction of a parliament, in the weight which the Imperial command bears with it and the importance of the business transacted, our country differs not a whit from those countries of Europe and America whose government is carried on on the principle of executing the wishes of the people, and it is important that our officials should not be forgetful of their responsibility and should keep constantly before their eyes our five-clause Constitution.

The Constitution is the mind of the State; the officials are the members.\* If, when the mind issues its commands, the members act in a contrary direction, or without waiting for the mind's orders, the affairs of the whole country must fall into confusion and the whole nation feel ill at ease. The final results of such a state of things it would be hard to foresee. If such were to be the lot of our own country the vigorous policy inaugurated on a former day would stop short with the mere idle abolition of the former system of government, and the pains and labour of the people would have been spent to no purpose and vanish like foam on the surface of water. To talk of the affairs of the Empire is easy: to put one's ideas into practice is hard. Let us then, while it is still open to us to do so, keep strict watch over all our proceedings.

Whilst pondering on the Emperor's words on the occasion referred to, the following thoughts occurred to me. What reason could there be for making the entire Empire the private possession of a single family? The Emperor dwells in it along with his people, along with his people he defends it, and of all the parts of the administration there is not one which does not affect them. The subjects ought, on the other hand, each to have his full rights and bear his due share of the public burdens. During my visit to France, a learned gentleman of that nation named Brook (?) said to me. "The people of France cannot compare with the people of England, and this is deeply to be lamented. The reason is that, generally speaking, there is no Englishman who does not enjoy to the full the rights given by his Government, whilst not only are the French deprived of more than half their legal rights, but many of them are eager wrongfully to

"seize privileges never granted them. This has been the sure cause of the frequent revolutions which have kept our country in a state of weakness. This state of things is truly lamentable." These words sent a thrill through me and filled me with shame. Every citizen's object in life is to maintain all his rights and so preserve his natural liberty, and to assist in carrying on the Government by bearing his part of the national burden; and therefore they (i. e., the rights and burdens) are specified exactly in writing and men bind themselves by a solemn promise to permit no infringement of them, but to act as mutual checks on each other in maintaining them. These writings are what we call laws. The laws are the offspring of the constitution, for the constitution is the root of every part of the system of government, and there is none which does not take its rise from it. And this is the reason why every country, when the time comes for changing its constitution, bestows on it the greatest care and the ripest consideration and ascertainment to the full the general wishes. No new measures are put in force lightly or hastily or if they are not imperatively called for by the circumstances. In the case of a country where the sovereign goes to meet the wishes of the people, the greatest care must be taken to conjecture them with accuracy, the internal condition of the country must be profoundly studied and a wide view taken of the national industries. Then comes the most important point of all, and that is to suit the measures to the degree of civilization of the people.

Again, in ordering the affairs of a nation, its strength must be taken into account. If not, one good will be converted into a hundred evils. The poor man's son who tries to rival the son of the rich man, ruins his property and his house, and in the end does not make a show equal to his rival. Those who order the affairs of a nation should remember, before taking action, to consider the due sequence of measures, and should proceed by gradual steps in nourishing its strength, for no nation ever attained to a perfect state of civilization in a single morning.

Every country in the world has inhabitants of some sort, and, putting aside its condition as civilized or barbarous, some of the people are wise and others foolish, some are rich and others poor. Those who are wise and able and competent to conduct affairs find their way to offices of state, while the wealthy preside over industry and give employment to the poor; all this is nothing more than the natural order of things every where. But as the return of one swallow does not allow us to say that Spring has everywhere commenced, and it is not till the mists extend their veil and the hundred flowers are seen rivaling each other in beauty that we can praise Spring's gentle warmth; so in spite of the appearance of one or two able men or of a few opulent men, all the rest of the nation may still remain buried in poverty, ignorance and degradation. Such a country it would be premature to class with prosperous and enlightened states.

When I consider the results of the measures of the past few years with reference to the present condition of our country, it appears to me that the tendencies of the period are still wanting in directness. The people's minds are perversely turned in one direction, and instead of exercising their rights, many of them mimic idly the arts of civilization: instead of discharging their responsibilities to the State, they are much given to ill-judged pretensions to enlightenment. The consequence is that although they are gradually acquiring more elegance in externals and the old rustic coarseness is becoming abolished by degrees, they find it hard all at once to become enlightened in their hearts.

Another evil is that the laws are promulgated without due consideration. What was thought right yesterday is condemned to day, and before one measure comes into operation it is followed by another. The people must certainly find it hard to put up with this. The business of government is multifarious: there is no limit to progress, and the important matters of the nation must follow the advance of civilization. The government ought not therefore to reason as if the position of affairs was now the same as it was in 1868. If those who hold the reins of government were now to guide themselves by those five clauses as the whole constitution, they would be at a loss as often as a decision had to be taken on

\* Note by the author.—It is a common saying in Europe that "the Constitution is the mind and the officials the members." Another version is "The people are the mind and the officials the members." But as the Constitution proceeds from the unanimous wishes of the people, the principle of the two maxims is the same, although their language is different.

any unusual matter, and they would probably fail to satisfy the wishes of the people. Our most urgent duty at present is to avoid future difficulties by giving effect to the August Command, adding to the five clauses others founded upon them, and establishing laws. It is also essential to nourish the people and to enable them quietly to raise themselves from their present state of degradation, having done which the day of great results for the nation may calmly be awaited. When once the condition of the people has been improved it will *then* be the occasion for statesmen to devote themselves to their country's service, for if they do so they will lay in a rich store of blessings for the future. But if the day of great results is not calmly awaited, if one or two clever men, seeking their own personal aggrandisement alone and regardless of the wishes of the people, should, with the hope of gaining a reputation as successful statesmen, cause a leading department to monopolize all the powers of government, and attempt to imitate the example of civilized countries in every detail of the administration, without due consideration, the progress of the country will become involved in difficulties and its position as precarious as that of a pile of eggs. I fear that in such a case I, and such as I, would feel deeply the responsibilities of another time.

I have now given my reasons for thinking that our most urgent need at present is to establish the constitution and the laws. I have been told that the ancient Romans had a saying "Wherever there is a people, there are laws." By this, it may be seen that a constitution and laws are indispensable things.

In the midst of all that I saw and experienced during my travels in Europe and America, my deep reflections on the past stirred up in my own mind apprehensions for the future. These views I have felt unable to restrain from uttering, and I therefore put them before you, my readers, that you may examine and pass judgment upon them.

#### THE TOKEI NORMAL SCHOOL.

THE Shi Han Gakkô, or Tokei Normal School, is another of the schools under the Education Department in Tokei, and is designed to fit Japanese young men to be teachers in the schools of Japan. These young men will teach in their own language, according to western methods and with discipline. The Shi Han Gakkô is therefore a training-school for Japanese teachers.

The buildings now used for the purpose are in the northern part of the city, about a mile from the Imperial College, and are situated within the grounds of the old Chinese college, close by the temple of Confucius. As it is one of the most interesting places in the capital, to visit, and as visitors are always welcome, we may remark that the easiest way to reach it, from the station, is to go straight up the Tôri, or main street, about two or three miles, and pass over the new stone bridge (Yorodzu Yo Bashi), which being crossed, the school is easily found by going a short distance westward.

The two divisions of the school are the Academic and the Normal. In the former, Japanese young men receive a good education and are instructed how to teach after the manner of foreign teachers. They thus receive as good a subjective education as a professional teacher ought to have, and are instructed in the best methods of imparting their knowledge to others, and how to manage a class of scholars. In the latter, the Japanese young man is actually given a class of boys and girls, and, under the eye of a skilled foreign teacher, learns to instruct his pupils to put his theory into practice and to govern his class according to the discipline of American schools. To the description of these two departments, the Academic and Normal, we now proceed.

There is only one foreigner connected with the institution, and it is chiefly under his advice, supervision and work, that the organization and results have been brought about. He is a professional teacher of several years experience in the United States, and was formerly the Superintendent of the San Francisco High School, and was afterwards in the Imperial College in Tokei for about one year.

The Normal School was established in order to obtain

a supply of properly-trained teachers for the new graded schools which, according to the scheme of the Education Department, are to number over 50,000. It was begun in the following manner.

A class of twenty-five picked young men was formed, and began the study of English. They were fresh and unspoiled, and learned with great rapidity. At a certain point, as soon as they could understand the ordinary expressions of their foreign instructor, the study of English was dropped. They had been taught so far, simply for the purpose of becoming familiar with the manner in which a foreign teacher instructs a class, and maintains discipline. It was something very different from what they had been accustomed to. In Japanese schools, the teacher usually takes a class of six or less, and instructs each scholar separately. They know nothing of reciting in concert, and the discipline in a large school is, in respect of noise and irregular attendance, about equal to that of the very worst country schools at home.

As soon as these young men had learned how a class in a foreign school is taught and managed, little children were brought in, formed into classes, and the young men set to teach them. This they did in the presence, under the eye and by the aid of their foreign instructor. The latter did not know Japanese, nor did he need it.

At present there are 150 young men in training to be teachers. They are from almost every section of the country. According to the rules, the prospective teacher must not be over twenty-five years of age, but no applicant is very severely cross-questioned as to his years. They are arranged into classes of about thirty each, and are first drilled in the correct pronunciation of their own language. As they come from all sections of the Empire most of them use provincialisms, and a style of pronunciation that varies greatly from the standard language of the capital. The importance and significance of securing a uniform pronunciation will be appreciated by all readers of this article, at once. Starting thus, the young men begin a regular course of study in, and by means of Japanese and Chinese, which is to be equal to that of a good High School in the United States. They study foreign learning and science by means of text-books translated from English into Japanese. At the start, they are supposed to have a fair knowledge of Chinese and Japanese, and to be assured of this, they are subjected to an examination before they can enter the school. Of all the young men who apply, only about one-third of the number are chosen.

The very best Japanese teachers procurable are set over these young men as instructors. The foreign superintendent visits the class rooms at intervals, to see that the general foreign methods and discipline are observed. No unnecessary talking, no smoking, no awkward positions, nothing that would be out of place in an American school is allowed.

It must be kept in mind that these young men learn no English whatever. They use the following text-books translated into Japanese, printed and bound in Japanese style: Willson's series of Reading Books, four in number; Robinson's series of Mathematics, comprising simple and advanced Arithmetic, Algebra, Mensuration and Geometry; Monteith and McNally's System of Geography; Cuttor's Anatomy and Hygiene; Willson's Outlines of Universal History.

Most of the above books have been already translated. Others are in progress, and the series will comprise those in an average American High School use.

The young men study and recite five hours daily. They number at present one hundred and fifty. They are divided into relays of six each, and take their turns at teaching the boys and girls for a week at a time. At present, the turn of each young man comes around about once in three months.

In getting his education proper the young man is simply a pupil. Besides his actual acquirements of knowledge, he is taught how to impart his knowledge and how to manage a large class. He is taught how to use the slate and pencil, globe, map, phonetic and pictorial charts, blackboard etc., as a child would use them. He is actually taught how to teach properly, before he leaves his Japanese teacher. This is his theoretical training as a teacher. For his practical training, for his induction into

the actual work of teaching and managing a class, the Normal department exists. For success in class teaching, such as is pursued in the best foreign schools, three qualifications are essential; 1st Knowledge of what is to be taught; 2nd Ability to impart that knowledge; 3rd Power and skill to govern a class.

The young man gains the first requisite in the Academic department; to prove whether he has the second and third, and to gain them, he enters the Normal department.

To serve the double purpose of a field of practice for the young men who are to be teachers, and of a primary school for the instruction of children between the ages of six and nine, there were brought in, last April, one hundred boys and girls who had never before been taught, and hence were unspoiled. They are now arranged into five classes, and are under the instruction of the young men who have been already trained in the art of teaching. It is proposed to increase in a few weeks, the number of pupils, and to put fifty in a class, as in the primary schools of the United States. A new brick building in foreign style is also to be built. There will then be ten classes of fifty pupils each, making five hundred in all.

The children are to be taught through the primary, and secondary, up to the average American grammar school course. There are to be eight grades of study, and the course will require six years for completion. Boys and girls study together, the former being in the majority. The average age of the pupils is eight years.

The apparatus for these pupils consists of Willson's series of readers, translated into Japanese; slates and pencils; blackboards and chalk; improved copy-books for writing; text books of arithmetic translated from the English; and a system of charts, both phonetic, ideographic, numerical and pictorial. The charts number thirty in all, and contain about 800 objects. No. 1 contains the *kata kana*, which is learned by the eye and ear, and with the voice, slate and pencil and pen, and paper. No. 2, the *hiragana*, learned in like manner. No. 3, the Chinese numerals up to ten. No. 4, the *niigori* marks and letters. No. 5, the Arabic numerals. No. 6, the roman numerals. Other charts contain the Chinese, Arabic, and Roman, numerals up to 100, and combinations up to 1,000 are made. The pupils are practiced in counting from one to a hundred, to a thousand, backwards, forwards, skipping one, two, three, four, five, &c., then by odd and even numbers, and in every possible way until they can handle numbers as easily as words. Mental and written addition, subtraction, and the multiplication table, adding up columns of figures and notation are next taught. The pictorial charts contain coloured drawings of the most familiar objects of every day life, with the Chinese ideograph beside them, so that the name of the object, and the sound and form of the character are fixed in the memory at once. This differs from the Chinese and Japanese method, which is to learn the sound first, without regard to the meaning of the character. By the method of charts, the eye and ear assist each other. Next follow the names of vegetables, household articles, furniture &c., and from these the pupil is gradually led to more complex objects, such as flowers, trees, rarer animals, clocks, thermometer, &c. From these, the ascent is to abstract terms, feelings, the relations of life, uses of various parts of the body, weight and measures, lines, geometrical forms, angles, colours, etc. Practice in reading and writing Chinese and Japanese consume a large portion of the time. It is intended to study the Geography and History of Japan first, and then that of other countries. In due course, the other elementary branches of learning will be introduced.

The scholars under this system not only make very rapid and sound progress, but the young men acquit themselves with great credit as teachers. The progress already made is more than encouraging, it is astonishing.

The foreign instructor is engaged in overseeing both departments, the Academic and the Normal. Any dereliction of duty, any breach of discipline or slovenliness of work or lack of attention, is at once corrected. Under the easy and pleasant, because natural and graded methods pursued in this school, learning is made almost as attractive as playing, and the boys and girls seem to like it as much. The teachers are taught that the very first requisite of a good teacher is to interest his class.

The children are kept in school five hours a day, but ten minutes for play are allowed at the end of each hour. Gymnastics outside, and calisthenics in the class room, are practised by the young men in the Academic, and by the teachers and children in the Normal department and primary school.

The young men who finish their course of study, and succeed well in the actual work of teaching and managing large classes, are to be given a diploma by the Mom Bu Sho certifying their acquirements and ability. Those who cannot succeed as teachers, or fail to become good students will receive a certificate specifying what they have done, in other words, a partial diploma.

The charts and translated books referred to above, are now made by hundreds and are sent out to be used in the various schools throughout the country. A good Japanese grammar, by a native scholar is said to be in preparation, but of this, we cannot speak with certainty. It is proposed to establish other normal schools as necessity arises and means allow.

## A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

3RD YEAR OF BUNKIU, (1863).

1st month 5th day.—The Russians gave us a friendly warning that the English and French were preparing an expedition against Japan.

1st month 6th day.—The old Daimio of Saga came to Yedo. On the 8th, he was ordered to attend to the education in literary and warlike accomplishments of the Shogun.

1st month 7th day.—A French ship came to Yokohama. It was said that others would follow.

1st month 7th day.—The old Daimio of Nagoya arrived at Kioto.

1st month 10th day.—The old Daimio of Tosa left Yedo and went by sea to Kioto.

1st month 13th day.—At Yedo the runaway clansmen murdered Uno Hachiro of the Takatsuki Han.

1st month 15th day.—The old Daimio of Kumamoto arrived at Kioto.

1st month 20th day.—The Daimio of Okayama left Yedo for Kioto.

1st month 22nd day.—The old Daimio of Fukui left Yedo by sea for Kioto.

1st month 22nd day.—At Osaka, the runaway clansmen murdered the unattached samurai Ikemuchi Daikaku. They sent one of his cats to Lord Nakayama, the other to Lord Sanjo.

1st month — day.—The Daimio of Akita left Yedo for Kioto.

1st month 29th day.—The Daimio of Tokushima left Yedo for Kioto.

2nd month 3rd day.—Between this day and the 12th, eight English ships arrived at Yokohama.

2nd month 5th day.—Ayanokoji was interdicted from holding intercourse with members of the Imperial Household, with Princes, or with samurai.

2nd month 6th day.—In Choshu, the Daimio of Hagi put to death Nagai Uta a samurai of his Han.

2nd month 11th day.—Todoroki Bukei of the Kumamoto Han, Kusaka Gentan of the Hagi Han, and Takeichi Hampeida of the Kochi Han demanded to learn from the Mikado's Court, the fate of the expulsion of the barbarians.

2nd month 12th day.—By an Imperial edict, the Shogun's stay at Kioto was fixed at ten days.

2nd month 13th day.—Ohara Sayemon no Jo ordered Uratsuji, one of the Household, to confine himself to his house.

2nd month 13th day.—The Shogun set out from Yedo, and went to Kioto by the Tokaido accompanied by the Daimios of Yamagata and Matsuyama. He reached Kioto on the 4th day of the 3rd month.

2nd month 13th day.—Prince Awata returned to the ranks of the laity, and received the name of Prince Nakagawa.

2nd month 16th day.—The Daimio of Mito left Yedo for Kioto.

2nd month 18th day.—The Daimio of Sendai did so also.

2nd month 18th day.—The Mikado ordered those Daimios who were staying in Kioto to present addresses in the Gokusshuin.

2nd month 19th day.—An English ship came to Shinagawa. The English produced a letter to which they demanded an answer within twenty days. This letter was about an indemnity for the Namamugi affair.

2nd month 22nd day.—At Kioto, some samurai went to the shrine of Tojiin, cut off the heads of the wooden figures of Takanji, and the other Shoguns of the Ashikaga line, and set them up at Shijogawara. On the 27th, the Daimio of Wakamatsu arrested the offenders.

2nd month 23rd day.—The Daimio of Kanesawa arrived in Kioto.

2nd month 26th day.—At Kioto, the runaway clansmen killed a Karo of Chigusa Jikwan named Kagawa Hajime. They sent one hand to Iwakura Sayama and one to Chigusa Jikwan, and the head to Lord Hitotsubashi.

3rd month 1st day.—The Daimio of Wakayama left Yedo for Kioto.

3rd month 3rd day.—The Mikado issued an edict renewing to the Shogun the governing authority originally attached to his office.

3rd month 5th day.—The Daimios of the eight provinces round Yedo were ordered to make warlike preparations, as it was impossible to say what were the intentions of the English.

3rd month 6th day.—The Daimios, Hatamotos and Hoi were summoned to the castle, where they were informed that the Government had resolved to defend the country against the English to the last drop of blood in their veins.

3rd month 7th day.—The defence of Gotenyama, Hamagoten and Etchu-jima was entrusted to the Daimios of Kamimoyama, Sekiyado, Kameda and Sabaye.

3rd month 7th day.—The answer to England was delayed for fifteen days. At this time Yedo was greatly excited. Many Daimios sent off their wives and daughters suddenly to their provinces.

3rd month 7th day.—The Shogun was received by the Mikado for the first time.

3rd month 11th day.—The Mikado went to the shrine at Kamo, accompanied by the Shogun and the Daimios.

3rd month 11th day.—The Mikado cancelled the order for the Shogun to remain ten days in Kioto, and instructed him to return as soon as he had taken steps to conciliate the minds of the people.

3rd month 14th day.—Shimadzu Saburo arrived at Kioto. On the 18th, he went back to his province.

3rd month 14th day.—Those who had less than 10,000 kokus of revenue (Hatamotos, etc.) were permitted to send their wives and daughters to their estates.

3rd month 16th day.—The Daimio of Tottori went back to his province; on the 17th, the heir of the Daimio of Hagi went to Hiogo. Many other Daimios returned to their provinces, but it is impossible to enumerate them.

3rd month 17th day.—It was notified that on account of the English ships, the Shogun would return to Yedo on the 21st.

3rd month 17th day.—The Mikado gave orders that the English should be brought to Osaka and negotiated with there, and that the Shogun should himself give directions for the defence of Kioto. The Shogun remained at Kioto.

3rd month 18th day.—Orders were given to furnish troops for the expulsion of the barbarians and for the Shogun's body guard.

3rd month 19th day.—The answer to England was again delayed for 30 days. There was great excitement at this time in Yedo and Yokohama, and people fled away in all directions.

3rd month 21st day.—A stone mason named Tamizō was killed by a Frenchman at Yokohama.

3rd month 21st day.—The old Daimio left Kioto for his province without receiving permission. On the 25th he was deprived of his office of Sōsai and condemned to the strictest seclusion.

3rd month 25th day.—Lord Konoye ceased to be Nairan.

3rd month 25th day.—The heir of the Daimio of Kara-

tsu (Ogasawara Iki no kami afterwards Jusho no kami) was charged with the reply to England. He reached Yedo on the 6th of the 4th month.

3rd month 25th day.—The Daimio of Mito was charged with the defence of Yedo, and ordered to represent the Shogun during the stay of the latter in Kioto. He reached Yedo on the 11th day of the 4th month.

3rd month 29th day.—Bunske, the younger brother of a police runner named Hanshichi, was killed at Yedo by some person unknown. At this time the ronins were collected into a body called the Shinchōgumi which was regularly established on the 21st of the 4th month.

4th month 2nd day.—From this day the ronins levied black mail in different parts of Yedo on the pretence of raising a war-fund for the expulsion of the barbarians.

4th month 3rd day.—The Daimio of Hagi was entrusted with the defence of Tsushima and relieved of that of Nishinomiya and Hiogo, and the latter towns were placed in charge of the Daimios of Kurume, Tsuyama and Oka.

4th month 4th day.—The Daimios of Akita, Odawara, Shonai, Takazaki and Nakamura were ordered to patrol the streets of Yedo. This was on account of the ronins.

4th month 6th day.—Zempukuji, the residence of the Americans, was burnt, owing to their own carelessness.

4th month 7th day.—The Daimio of Tottori came again to Kioto.

4th month 10th day.—The Shinchogumi murdered two of their own number who had been guilty of violence in the town and set up their heads on the Riogoku bridge.

4th month 11th day.—The Mikado visited Yawata. The Shogun was prevented by illness from accompanying him.

4th month 13th day.—The unattached samurai Kiyokawa Hachiro was killed by some person unknown. It was said that he was murdered by order of the Shogun's Government.

4th month 15th day.—The Daimio's furnishing the patrol for the streets of Yedo were ordered to arrest 20 men of the Shinchogumi. It was said that it was feared they had a design of attacking Yokohama.

4th month 17th day.—The defence of Gawata was entrusted to the Daimio of Fukuyama, and that of Yamazaki to the Daimio of —.

4th month 17th day.—A notice was attached to the public notice board at Sanjo Ohashi threatening with the vengeance of Heaven the Shogun, Lord Hitotsubashi, and all the officials.

4th month, 19th day.—It was notified to the Captains of the Yedo guards that intercourse with foreigners countries would cease after the Shogun returned to Yedo.

4th month, 21st day.—The Shogun inspected Osaka. He returned to Kioto on the 11th day of the 5th month.

4th month 21st day.—The Mikado issued an edict fixing the 10th day of the 5th month as the date for breaking off intercourse with foreign countries.

4th month, 21st day.—The Mikado commanded the old Daimio of Nagoya to assist the Shogun.

4th month, 21st day.—It was notified that a new road would be made from Shinagawa to Fujisawa.

4th month, 21st day.—The Namamugi question was discussed with the English. It was notified that a subsidy would be granted them, and that the arrangements for closing the ports were being discussed.

4th month 21st day.—The Daimios of Nagoya and Mito reported to the Mikado that the payment of money to the English was unavoidable. On the 9th day of the 5th month the Mikado ordered them to tell the whole truth, seeing that this was contrary to the Imperial commands.

4th month, 22nd day.—Lord Hitotsubashi set out from Kioto. He arrived at Yedo on the 8th day of the 5th month.

4th month 27th day.—The old Daimio of Kakegawa was again appointed Roju. He again ceased to be Roju on the 14th of the 5th month.

5th month, 3rd day.—The old Daimio of Nagoya left Yedo for Kioto. On the way there he returned to his province.

5th month, 4th day.—It was notified that war might possibly break out this very evening.

5th month, 4th day.—On this and the following two days none of the Roju went to the Castle.

5th month, 8th day....Orders were given to make preparations for burning Mita, Takanawa and Shinagawa.

5th month, 8th day.—A notice was posted up at the residence of the Daimio of Hamamatsu and at the Nihonbashi, threatening with the divine vengeance the eighteen Daimios who conducted affairs.

5th month, 9th day.—450,000 dollars were given to the English.

5th month 9th day.—The heir of the Daimio of Karatsu sent letters to the English, French and other countries seven in all, intimating the breaking off of intercourse at the ports of Nagasaki, Hakodate and Yokohama. The officials of the seven countries sent replies.

5th month, 9th day.—All the officials attended at the Castle to discuss the question of closing the ports.

5th month, 10th day.—At Shimonoseki, the Choshu men fired into an American merchant vessel.

5th month, 12th day.—It was notified that 10 guns fired at Hamagoten would be the signal announcing the outbreak of hostilities.

5th month, 12th day.—A notice was posted at Shinriogaye Street that the divine vengeance would fall on the Daimio of Mito, the Roju, and those who had paid money to the English.

5th month, 19th day.—The heir of the Daimio of Karatsu, Midzuno, Chiiin, Inoiye Shinano no Kami and others left for Osaka by sea. They took with them a force of more than 1000 foot soldiers. They arrived at Osaka on the last day of the month.

5th month, 20th day.—Anenokeji was murdered at Kioto by some persons unknown.

5th month, 20th day.—The runaway clansmen murdered Iyezato Shintaro and set up his head at Sanjogawara.

5th month, 21st day.—A notice was posted on the door of the Gakushuin threatening Lord Sanjo with the vengeance of Heaven.

5th month, 23rd day.—At Shimonoseki the Choshu men fired into a French ship.

5th month, 25th day.—Nirei Gennoske and Tanaka Gombei of the Kagoshima Han were arrested on suspicion of having been the murderers of Anenokeji.

5th month 26th day.—At Shimonoseki the Choshu men fought with a Dutch vessel. There were killed and wounded on both sides.

At this time Lord Hitotsubashi repeatedly offered to resign the office of guardian to the Shogun.

6th month, 1st day.—At Shimonoseki the Choshu men fought with an American ship. Two of the Choshu ships were sunk; there were killed and wounded on both sides.

6th month, 1st day.—The Mikado sent orders for either the old Daimio of Iiagi (Choshu) or his son should be sent for.

6th month, 3rd day.—The Shogun had an audience of the Mikado and took his leave. On the 9th he left Kioto for Osaka, and on the 11th left Osaka by sea for Yedo where he arrived on the 16th.

6th month, 3rd day.—There was a fire in the western enclosure of the Castle.

6th month, 5th day.—Prince of Nakagawa petitioned to lead the van of the army for the expulsion of the barbarians.

6th month, 5th day.—At Chofu, the Choshu men fought with a French ship. The Choshu men were worsted and fled.

6th month, 8th day.—The Mikado gave orders to punish severely the heir of the Daimio of Karatsu.

6th month, 10th day.—The heir of the Daimio of Karatsu was deprived of his equality of rank with the Roju, and was given in charge to the Governor of the Osaka Castle. He returned to Yedo on the 14th of the 7th month and lived there in seclusion. Midzuno Chiiin, Inoiye Shinano no kami and Mukoyama Eigoro were dismissed from office and condemned to seclusion.

6th month month, 14th day.—The samurai of the Tototori Han fired into an English ship at Osaka.

6th month, 16th day.—The Military Inspector and Imperial Envoy Okimachi Shosho was sent to Choshu. He returned to Kioto on the 26th of the 9th month.

6th month, 16th day.—Fourteen of the north-eastern Daimios were sent for to Yedo. The question of the expulsion of the barbarians was still under discussion, it was said.

6th month, 18th day.—The Daimio of Himiji was made President of the Roju.

6th month, 21st day.—The old Daimio of Nagoya returned from Kioto to his province.

6th month, 23rd day.—At Kanagawa, Chubei, the pilot of the English ship which had gone to Shimonoseki, was murdered and his head set up at Koyasumura. The murderers were not discovered.

6th month, 25th day.—The Mikado announced that the date for the expulsion of the barbarians remained unsettled, and that the Daimio of Wakamatsu had been ordered to make arrangements for it. The latter took the place of Oguri Shimosa no kami and came to Yedo on the 14th of the 7th month.

6th month, 26th day.—At Kioto the runaway clansmen murdered Aki Tadzura of the Tokushima Han.

6th month, 27th day.—A notice was posted on the Nihon Bashi that punishment was in store for the crimes of the Daimio of Matsumaye and of Hiraoka Dzushiro.

(To be continued.)

# "HISTORIA IMPERII JAPONICI GERMANICÉ SCRIPTA AB ENGELBERTS KAEMPFER.

LONDINI, 1727."

*Read before the Asiatic Society, of Japan, on the 22nd October, 1873, by R. G. WATSON, Esq.*

(Continued from No. 43 Japan Weekly Mail.)

Another argument to the same end is derived from their different modes of life, as for instance in eating, drinking, sleeping, dressing, shaving the head, saluting, sitting, and many other customs. The characters of the two nations are, he considers, essentially distinct, the Chinese being modest and lovers of a sedate, speculative, philosophical mode of life, though given to fraud and usury, whilst the Japanese are warlike, dissolute, mistrustful, ambitious, and always bent on high designs.

The arguments employed by Dr. Kaempfer to prove that the Japanese are not of Chinese descent are at least philosophical if they are not conclusive, but when the learned author, not content with proving or endeavouring to prove from whom the Japanese are *not* descended, proceeds to tell us what their origin is what at the present day shall be said of the arguments which he employs in support of his theory? The Japanese, he asserts, are clearly an original nation, at least they are not descended from the Chinese. Whence then, he asks, is their descent? "Perhaps it is not inconsistent with reason and the nature of things to assert (p. 86) that they—the Japanese—are descended of the first inhabitants of Babylon (such is the word he uses, meaning presumably Babel), and that the Japanese language is one of those which sacred writs mention that all-wise Providence thought fit to infuse into the minds of the vain builders of the Babylonian Tower." On this conjecture, in support of which he does not even attempt to bring forward any argument whatsoever, Dr. Kaempfer proceeds to raise a further theory, his sole argument in favor of which seems to be of itself destructive of his theory. In view of the purity of the Japanese language and of the fact of its not affording the slightest trace of possessing any words belonging to the languages of the countries through which the author supposes the original Japanese to have passed on their way from the banks of the Euphrates to the Korean sea, he comes to the conclusion not that they never passed through those countries at all, which would seem to be the natural conclusion, but that they came through them as it were at express speed. Thus the only scientific argument which could be adduced with reference to the theory, and which seems to me to dispose of it, is misconstrued into its service. The Japanese, according to Dr. Kaempfer, must, it seems, have travelled from Babylon by way of Persia and the shores of the Caspian Sea whence they ascended the Oxus to its source. It was then no difficult matter for them to penetrate to China, discovering in their route the lake Argum, continuing their journey along the river of the same name and then descending the Amoor, whence they found their way to the Corea and—being now accustomed to navigation—across to Japan.

Such is the theory as to the origin of the Japanese nation which is propounded by Dr. Kaempfer, but he,

with much more reason, admits that the original stock may have been supplemented by Chinese colonists and the crews of ship-wrecked vessels. He gives proof that the Chinese writers had influenced Japan and he cites several interesting instances, from the times in which he wrote, of vessels from strange countries being stranded on the Japanese coasts, their crews being saved alive. Of one of these the three black sailors who were saved could distinctly pronounce only one word "*tobacco*." (p. 94.) "The Japanese int he main, particularly the common 'people of Nipon, are,' says Kaempfer, 'of a very ugly appearance, short-sized, strong, thick-legged, tawny, with flattish noses and thick eyelids, yet the descendants 'of the eldest and noblest families have somewhat more 'majestic in their shape and countenance.'"

Having given the above theory as to the beginning of the Japanese race, according to his opinion, Dr. Kaempfer proceeds to give the theory (or, as he calls it, the fabulous opinion) of the Japanese themselves upon the same subject, an opinion which many will think scarcely more fabulous than that propounded by Dr. Kaempfer. (p. 96.) "They pretend, that they arose within the compass of their 'own Empire, though not out of the earth. They esteem 'themselves no less than offsprings of their very Deities.' From their Deities 'sprang an intermediate race between 'gods and men, the greatest of the race of men being 'Sin Mu Tenoo, in whose family the hereditary right 'to the Crown with a more than human authority was 'continued down to the present 114th Mikado, that is '2360 years, computing to the year of Christ 1700."

The next succeeding chapter (8th) is devoted to the climate and the products of Japan. It includes observations under the following heads—namely, "Whirlpools," "Waterspouts," "Soil," "Rivers," "Earthquakes and places free from Earthquakes," "Volcanoes." Under the head of Earthquakes the author mentions a violent convulsion at Yedo which occurred in the year 1703, whereby, and by a great fire, almost the whole city was laid in ashes, upwards of 200,000 inhabitants being buried under the ruins. Some particular places in Japan are, he says, free from shocks of this nature—a fact which, he adds, is not called in question—amongst these are the islands of *Gotho* and *Sikubusima* and the mountain *Kojasan* near *Miaco*, famous for its convents. (p. 104.)

Amongst the mineral products of the Empire the author enumerates sulphur, gold, silver, copper, tin, iron, coal, salt, agates, jasper, pearls, naphtha, ambergrease, and submarine substances. Of these, sulphur, he says, is brought chiefly from the province of Satsuma. Gold is found in several localities, the richest ore being in Sado. After the mines in Sado come those of Surunga. There are silver mines in the province of Bingo, and in Kattami. Copper is found chiefly in Surunga, Atsingo and Kijonokuni; tin in Bingo; iron in Mimasaka, Bizen and Bisen; coal in Tsikusen and the northern provinces. Salt is produced from the sea-water. Pearls were but slightly esteemed until it was found that they were prized by the Chinese, when they became an article of export. Naphtha is found in Jetsingo; ambergrease on the coasts of Satsuma and in the Rinku islands. It is found chiefly in the intestines of the whale, called from their supposed length by the natives *Fiakfiro*, or the *hundred fathom Fish*. Submarine substances are found in abundance in the Japanese waters. Amongst the minerals imported into the country are antimony and salamoniac, quicksilver and borax and sublimate (*sic*) mercury.

Chapter ninth of this Book is devoted to the trees and plants of Japan. Amongst these are specified the mulberry-tree, the *kadsi*, or paper-tree, the *urusi*, or varnish-tree, the bay, the *kus* or camphire-tree, the tea-shrub, the *sansio*, the fig-tree, the wild-fig, the chestnut, the pear, the walnut, the pistach, the oak, *naatsime*, citron, orange, lemon, vine, bramble, raspberry, strawberry, plum, cherry, fir, cypress, bamboo, *maki*-tree, iron-tree, *tsubacki*-shrub, *satschi*, *sakanandsio*, maple, *fasi*-tree, feverfews, various lilies, the hemp-plant, the cotton-plant, the wild hemp plant, plants affording oil, the turnip and others. In naming the above plants I have followed the order observed by Kaempfer. (p. p. 112-122.)

The two following chapters give a list of the Beasts, Birds, Reptiles and Insects, as well as of the Fishes and Shells of the country:—

Amongst the animals the author does not fail to introduce certain chimerical quadrupeds with the delineation of which those who have lived in Japan are probably familiar. Of these is the *Kirin*, a creature of incredible speed, having two soft horns before its breast and bent backwards, having the body of a horse, the claws of a deer and the head similar to that of a dragon. The animal in question is so considerate that it takes care never to trample on any plant and never to injure any insect or worm. Its conception requires a particular constellation in the heavens, and on earth the birth of a *Sefn* or man of an incomparable understanding and remarkable love for mankind. A representation of the *Kirin* is given amongst the plates at the end of Vol. I.

Other chimerical animals are the dragon and the water-dragon. These are likewise represented in the plates. The next chimerical creature of which mention is made is the *Foo* or Bird of Paradise, nearly akin to the Phoenix of our classical legends. This bird, of which there is likewise a representation, dwells high in air and only visits the earth on the birth of a *Sefn* or of a great Emperor.

From these the author turns to creatures that have a real existence. They are given in the following order. The horse, the ox, the cow, the buffalo, the sheep, the goat, the swine, the dog, the cat, the deer, the monkey, the bear, the *Tanuki* (resembling a wolf, but of a brownish colour and having a fox's snout) the wilddog, the *Itutz*, the *Tin*, the bat, the mouse, the fox, various reptiles, white ants, *Mukadde* or forty-legs, lizards, snakes, hens, ducks, cranes, herons, wild geese, ducks, pheasants, woodcocks, wild pigeons, storks, falcons, hawks, ravens (from China and the Corea) *Foken*, (a night bird,) *Misago* (a voracious sea bird), mews, larks, nightingales, bees, butterflies, beetles, and another kind of beetle, called *Sebi* or *Cicada*. It is asserted, says the author, that its noise may be heard at a full English mile's distance. It disappears in the dog-days and is said to creep into the ground in order to undergo a metamorphosis previous to reappearing the next year anew in a dormant condition from which it again re-emerges (p. 131.) The Japanese name *Semi* which it bears is given to this insect from its sound resembling music. Other creatures produced in Japan are the Spanish fly and a peculiar night-fly of such beauty as to be preserved by ladies amongst their curiosities. There is a curious belief attached to this fly, namely that all other night flies fall in love with it—a fatal step on their part, since in proof of their devotion they must fetch it fire, in doing which they singe their wings.

Amongst the productions of the sea the first-mentioned is the Whale, which is found chiefly on the southern shore of the chief island. It is caught by means of darts or harping-irons. The Japanese whaling-boats are, says Kaempfer, smaller than ours, and apparently better adapted for their purpose, carrying each ten men who row them with incredible swiftness. In 1680 a new method of catching whales was discovered, namely by nets of rope two inches thick, (p. 133). This method was practised with great success, but it was abandoned on account of its calling for more expensive tackle than the fishermen could afford. The various sorts of whales are called respectively *Sebio*, *Awo Sangi*, *Nagass*, *Sotookadfura*, *Mako* and *Iwasikura*. Of all these several kinds of whales nothing is thrown away as useless excepting the large shoulder-bone. The skin, flesh, &c. are eaten, either having been pickled, boiled, roasted or fried. The blubber becomes train-oil. The bones when fresh are boiled and eaten. Out of the various portions they make ropes, whilst several little implements are constructed from the jaw-bones, particularly the stilyards for weighing gold and silver.

The fish next mentioned is the Satsisoko, which is sometimes as long as five or six fathoms, having long tusks which are sometimes used to ornament temples and public buildings. Amongst other fishes are the *Iruku*, the *Furuhe*, the Sea-Horse, the *Tai*, the *Khuro Tai*, the *Sufuki*, the *Funa*, the *Najos*, the *Mebaar*, (a red-coloured fish resembling the carp, caught in great plenty and the common food of the poor people); the *Koi*, the *Maar* or Salmon, the *Itojori*, a small Salmon, the *Makuts*, the *Sawara*, the *Fuwo*, the *Kasuna*, the *Kamas* or Pike, the *Susuki*, the *Adsi*, the *Taka*, the *Kame*, the

*Jeje*, the *Come* or *Jei* or *Sole*, the *Bora*, the *Karasumi*, the *Katsuwo*, the *Managatsowo*, the *Sake*, (not unlike the Cod. This fish is brought from Yezo) the *Tara*, the *Sajori*, the *Tobiwo* (a flying-fish), the *Iwas* or *Sardine*, the *Kisugo* or *Smelt*, the *Jeso*, the *Saba* or *Mackerel*, the *Ai*, the *Sijoiwo*, the *Konosiro* (a sort of Herring,) the *Kingio*, the *Unagi* the *Eel* (several sorts,) the *Ika*, the *Jako* or *Bait*, the *Kuragge*; after which follow the names of forty varieties of shell-fish and minor products of the water, amongst them being included the *Oyster*, the *Crab*, &c., with which list the first Book of this work is brought to a conclusion.

The next Book (II) is devoted to the History of Japan properly so-called.

The author divides the History and Chronology of the Empire into three sections, the fabulous, the doubtful and the certain.

Of these the first dates from the time of the creation, Japan being then governed by a succession or evolution of seven Celestial spirits, each of which reigned for a very long but undefined period, and who were succeeded by a race of Demi-Gods, five in number and called *Dsi Sin Go Dai*.

Passing to the second or doubtful era of Japanese history Mr. Kaempfer observes, "It is little known what was the state of these countries and the way of life of the inhabitants, from the beginning of the creation to the time of their first Monarch, *Sin Mu Ten Oo*, whose reign comes down within 660 years of Our Saviour's nativity. It is highly probable that in those days the Japanese lived up and down the country, disposed in hordes (as do the Scythian inhabitants of Great Tartary) separate from the rest of the world by a rocky tempestuous sea, being as yet in a state of nature and freedom, without a settled form of government, and destitute of arts and sciences. The neighbouring Empire of China was then already grown very powerful, arts and sciences flourished there and were by the Chinese brought over into Japan. It was owing to this that the Japanese became in time polite and civilized. That so considerable a period of time should not remain empty in their chronological books they have filled up the vacancy with the names of the most eminent monarchs who after the demise of *Kitsurakuki* and the five descendants of his family sat on the throne of China." The names of the Chinese Emperors alluded to are as follows:—(1) *Fuki* or *Fohi*, who is said to have discovered the twelve Celestial Signs and divided time into years and months, and to have invented many useful arts and sciences. According to one of the Japanese historians consulted by Kaempfer this emperor began his reign 20,446 years before the Japanese emperor *Synmu*, or 21,106 years before Christ; and this pretension is considered by the orthodox historian to be sufficient to exclude him from even the doubtful era, since, says Kaempfer, it would place him thousands of years before the creation of the world. Kaempfer, however, seems disposed to attach more belief to the statement of another Japanese writer who places the commencement of *Fohi's* reign only 3,588 years before Christ or 396 years after the Creation, according to the Mosaic record as interpreted by Dr. Kaempfer. (p. 146.)

(2) The second Chinese emperor was *Sin Noo*, who is said to have taught mankind agriculture and to have discovered the uses of several plants. His picture, says Kaempfer, in which he is represented with the head of a horned ox, is held in high esteem among the Chinese, more especially by physicians. His reign extended over 140 years, a period which suggests the reflection that Dr. Kaempfer need scarcely have taken the trouble to divide his Japanese history into three branches, since the second or doubtful division seems scarcely less fabulous than the first.

(3) After this emperor came *Kwo Tai*, said by the Chinese historians to have really reigned, his reign beginning from the year B. C. 2,689, he being then eleven years of age. (4-8) His five successors reigned in the following order, viz: (4) *Tei Gio*, (5) *Tei Sjun*, (6) *Uu*, (7) *Sioo Sei Too*, (8) *Siu No Bu O*. (p. 148). Of these latter five the first named, *Tei Gio* was a *Sefin*, well-versed in occult arts. During the reign of the 2nd, *Tei Sjun*, a great deluge happened in China, overflowing many provinces. To the third of these emperors, *Uu*, China

owes canals and sluices. In the reign of the fourth, *Sioo Sei Too*, there occurred a seven years' famine, which reminds the author of the Egyptian famine of Holy Writ. The last emperor of these, *Siu No Bu O* came to the crown 462 years before *Synmu* and 1122 B. C. and was succeeded in their turn by 37 descendants. In the meantime the authentic history of Japan begins, as apart from that of China, which brings the author to the commencement of the last of the three eras into which he divides the history of this empire. (P. 148).

(Chapter 2). Here begins the long line of *Mikados*, or, as Kaempfer styles the monarchs of Japan, "Ecclesiastical Hereditary Emperors," and which dates from the year B. C. 660, being the 17th year of the reign of the Chinese Emperor *Kaiwo*. From that time till the year of Christ 1693 one hundred and fourteen Emperors of the same family have successively sat on the Throne of Japan. They value themselves extremely upon being the eldest branch of the family of *Ten Sio Dai Sin*, the sacred founder of the Japanese nation.

They have not inherited the title of *Mikotto*, which is given only to the divine and half-divine beings of the first and second succession, but that of *Mikaddo*, (which is a diminutive of the same word) as also the titles, *Dai, Oo, Kwo* and *Tai*. They are likewise termed *Tensin*, that is *Sons of Heaven*. The Princes of the Imperial house are looked upon, says Kaempfer, as Popes by birth. A Mikado of the time when he wrote and of former times would, he says, think it prejudicial to his dignity to touch the ground with his feet. He must be carried on men's shoulders. Much less may the monarch's person be exposed to the open air or to the beams of the Sun. His hair and beard may not be cut. His ablutions are performed on his person at night during his sleep. In ancient times he was obliged to sit on the throne for some hours every morning wearing the Imperial crown, and not stirring hands or feet or head or eyes. This tiresome duty was later commuted, the crown being placed each morning on the throne. The vessels and table-furniture made use of for the Mikado must be renewed at each meal. These are clean and neat but of common clay, and are generally broken after having been once used, in case they should fall into less holy hands. The Ministers of the Court name the nearest of kin the next heir without regard to age or sex. There have been even instances of an emperor being succeeded by his widow, as also of a Mikado abdicating in favour of his son. The entire court is composed of members of the same family of *Tensio Daijin*. At the time of Kaempfer's visit the secular emperor had assigned for the maintenance of the Mikado's court the revenues of the city of Miako and its appurtenances, which were so insufficient for the purpose that the Court of Kioto was remarkable for its splendid poverty.

The Mikado is the fountain of honour, but the titles which he confers are given not only to men of the sacred race, but likewise to secular persons—to the princes of the empire and to men of note, (p. 152.)—this being done at the suggestion of the secular monarch or on the condition of money payment. All ranks or titles are divided into six (6) classes.

The title of the 1st Class is *Dai Seo Dai Sin*. "The person who is honoured with this title is esteemed so great and sacred, that they believe that his soul becomes a *Camii*, or god, the moment of her departure from the body. For this reason the Mikado seldom bestows it upon anybody. The dignity of *Quanbuku* belongs likewise to this class. *Quanbuku* signifies the second person in the ecclesiastical court and the Prime Minister in all affairs relating to the empire. This title, says Kaempfer, is assumed by the secular monarch, or is given to the presumptive heirs. *Quanbuku* is the *Dairi's* Vicegerent and Prime Minister in all affairs relating to the empire.

2.—The following three titles belong to the second rank *Sa Dai Sin*, *U Dai Sin*, and *Nai Dai Sin*. They are never conferred on more than three persons at court.

3.—The *Dai Nagon* and *Tsunagon* make up the third rank. These two titles are always annexed to certain employments.

4 and 5.—The titles which belong to the 4th and 5th rank are *Seonagon*, *Tsunagon*, *Tsiusco*, *Scosjo* and *Sidsiu*. Both of these classes are very numerous and are divided into different ranks. The whole ecclesiastical

court assume the title of *Kuge*, by way of distinction from the *Gege*, that is to say the Laity and inferior sorts of people.

6.—The titles of the 6th class are *Tai U*, *Goi* and others.

When the secular Monarchs took the Government of the Empire into their hands the *Dairi* reserved to himself the prerogative of conferring titles in general, but with his consent the secular Emperor may confer two ranks *Maquandairo* and *Cami*, these being equivalent respectively to *Duke* or *Count* and *Knight*. The word *Cami*, used in this sense, must not be confounded with the same word meaning a deified soul.

The persons composing the ecclesiastical court wear a habit peculiar to themselves, and different from that worn by secular persons. The habit in question is thus described: (p. 153) Long trousers covered by a large gown, a long train which they trail after them on the ground, their heads covered with a black lacquered cap. Some have a broad band of black crape or silk; others have a sort of lap before the eyes. The women's dress at the court of the *Dairi* is likewise different from the costume of the secular women. But chiefly the *Dairi's* twelve wives, are dressed in sumptuous gowns interwoven with flowers of gold and silver, and so large and wide that it is difficult for the ladies to walk in them. Not only the *Kuges* but likewise many of the fair sex have acquired considerable accomplishments and reputations as poetical and historical writers. Formerly all the almanacks were made at court. The court are great lovers of music.

The Imperial consort occupies the same residence with the *Dairi*, the other wives living in separate palaces.

The Japanese reckon from two eras or epochs; from the beginning of the reign of *Synmo Tenno* or B. C. 660: the second and commonly-used one is called *Nengo*. It takes in a period of only a few years, generally less than 20, and is made use of in almanacks, proclamations, etc. They likewise reckon by periods of 60 years. (p. 156.)

The twelve celestial signs of the Japanese are:—(1) The *mouse*, (2) the *ox* or *cow*, (3) the *tiger*, (4) the *hare*, (5) the *dragon*, (6) the *serpent*, (7) the *horse*, (8) the *sheep*, (9) the *monkey*, (10) the *cock* or *hen*, (11) the *dog*, and (12) the *boar*. The same names are given and in the like order to the twelve hours of the day and to the twelve parts into which each hour is divided. What they call day is the interval of time between sunrise and sunset. This is divided into six equal parts, as is likewise the night, so that the length of an hour varies each day. The Japanese have five elements, wood, fire, air, earth and water. The beginning of the Japanese year falls about the fifth of February. They have a leap-year every other or third year, or seven in nineteen years. The necessity for this arises from their beginning a new year from the new moon next to the 5th of February.

(Chapter 3.)—The emperor *Synmu* is said to have done very much for his country and to have reigned during 79 years. He was succeeded by his son *Sui Sei* B.C. 580. In the 30th year of this monarch's reign was born in China the illustrious philosopher *Koosi*, or *Cumfufu*, known to us as Confucius. Then follow in succession the names and reigns and principle deeds of 114 ecclesiastical emperors, down to the Mikado who succeeded to the throne in the year 1687, and who occupied it at the time of Dr. Kaempfer's residence in Japan. The most noteworthy events of each year are likewise chronicled, Dr. Kaempfer being indebted for his information to two Japanese historians whose names he gives. (p. 200.)

The 6th chapter of the 2nd Book is devoted to the series of *Crown-Generals*, or, as Dr. Kaempfer likewise calls them, *Secular Monarchs*, of Japan, whose succession it is to be remembered was co-existent with a portion of the succession of the long line of Mikados. *Yoritomo*, the first Crown-General, having been born during the reign of the 76th *Dairi* in the year of Christ 1154. Of these latter monarchs—for *Monarchs* or *Sole Governors* they were in the true sense of the word—a series of thirty-six is named, beginning with *Joritomo* and coming down to *Tsinajosiko* who filled the *Shogun's* throne in 1692 at the time of Dr. Kaempfer's residence in Japan. Of these the most remarkable seems to have been *Taiko Sama*,

originally a peasant's son and in his younger year's a nobleman's domestic servant. Having become *Shogun* he reduced under his power all of the provinces of Japan which were until then governed by independent princes. He thus, properly speaking, became the first secular monarch of all Japan. On his death he was deified. With the termination of the chronicle of the *Shoguns* ends the 2 vol. of the work before us.

The Third Book is devoted to a description of the state of religion in Japan, and its first chapter opens with the following passage:—"Liberty of conscience, so far as it doth not interfere with the interest of the secular government, or affect the peace and tranquillity of the Empire, hath been at all times allowed in Japan." Hence it is that foreign religions were introduced with ease and propagated with success.

The four religions observed during the 100 years previous to the residence of Dr. Kaempfer in Japan were,

(1) The *Sinto* or idol-worship.

(2) The *Budsdō*, or worship of foreign idols, brought from Siam and China.

(3) *Sinto*, the doctrine of their doctors or philosophers.

(4) *Deicus*, or *Kiristando*, i. e. the way of God and Christ.

With reference to the last of the four the author observes that "it was owing to the commendable zeal and the indefatigable care of the Spanish and Portuguese Missionaries, particularly the Jesuits, that the religion Christian was first introduced into Japan, and propagated with a success infinitely beyond their expectation, insomuch that from the first arrival of the fathers in Bongo about 1549 (six years after the discovery of Japan) to 1625, or very near 1630, it spread through most provinces of the Empire, many of the princes and lords openly professing the same. Considering what a vast progress it had made till then, even among the many storms and difficulties it had been exposed to, there was very good reason to hope that within a short compass of time the whole Empire would have been converted to the faith of our Saviour, had not the ambitious views and impatient endeavours of these fathers to reap the temporal as well as the spiritual fruits of their care and labour so provoked the Supreme Majesty of the Empire as to raise against themselves and their converts a persecution which hath not its parallel in history, whereby the religion they preached and all those that professed it were in a few years' time entirely exterminated. (p. 204.)

With the above extract the time allotted to me for this evening compels me to conclude my observations on Dr. Kaempfer's History of Japan. They only relate to a portion of his entire work, but I shall place the remaining portion of my abstract of it in the hands of the Secretary, and I am happy to add that, in the event of the Council wishing it, Mr. Satow will append notes to this abstract, showing to how great an extent he is disposed to assent to the statements advanced in Kaempfer's work.

I would say that no one could rise from a careful perusal of Kaempfer's History without feeling disposed to pay an ample tribute of respect in reference to the large and valuable compilation of scientific facts which are in the volumes before us bequeathed to the world. The world which more immediately became the heir of this bequest was scarcely in a position to estimate the value of its possession, since in those days none could dispute many of the assertions of Dr. Kaempfer; but at the present day we are in a different position. The pages which were presented to the public one hundred and forty-six years ago have now been subjected to the full scrutiny of the scientific world. It would be beyond the purpose of this paper to examine minutely the exact correctness of Kaempfer's assertions or speculations in one or other of the fields in which his investigations were conducted. My object has only been to do something towards bringing to the notice of this Society the varied contents of a Work which has in a great degree supplied modern writers on Japan with suggestive materials towards their respective compositions.

## OUR NEIGHBOURHOOD.

## PART IV.

Notandi sunt tibi mores.

Note well the manners. Hor. Ars. Part Ver. 156.

That the barber in the main street of "Our Neighbourhood" is an impudent little wag, is an indisputable fact. If anyone can be found incredulous enough to throw doubt on this statement, he has only to go and stand before his shop door for a moment or so to convince himself of its accuracy. He must, however, be indifferent to ridicule, or at best, not very sensitive, if he hopes successfully to withstand the shouts of laughter directed towards him, which are sure to follow the jokes at his expense which will be rapidly fired off from the corner of his mouth by the barber aforesaid, who will look the while as sedate as it is possible for anybody outside of the society of Friends to appear.

Although the shop is somewhat of a mean-looking little structure, and appears all the smaller by contrast to the big rice store and the cake maker's between which it is situated, it is nevertheless very popular, and much frequented by the idle and unshaven, the former of whom esteem its proprietor for his good follow-ship, and the latter for his dexterity with the razor.

Tradition relates that he had once a rival in the shape of a travelled barber, who, penetrating into the dull quiet of "Our Neighbourhood," had the hardihood to plant a flame-colored pole,—set off by a blue spiral and surmounted with a gilt ball—in a flower pot before his door, and to announce upon his paper windows that this was a "KAMI HASAMI TOKORO," or establishment in which hair cutting was neatly executed. The neighbours, it is said, were as dumbfounded with astonishment as it is possible for such sleepy old duffers to be, and for many days the little barber's place was thronged, much tobacco was consumed, and many speculations were indulged in. "What does it all mean?" said the neighbours. But the little barber said nothing, except that occasionally when he shook his head more despondingly and heaved a louder sigh than usual, it is averred that he was heard to mutter gloomily that "the country was indeed going to the dogs." It has been recorded that never before nor since did he work so well, or shave so many heads and chins of a day as during the time his enemy's staff flourished in the green flower-pot. A kind of combination was, in consequence, it is supposed, started to support him, whereby the radical interloper found himself avoided, and our old friend was rallied round and became more popular than ever. Had any old neighbour trusted his chin to the hands of the stranger he had better have packed up his effects first, for "Our Neighbourhood" would surely have none of him after. Whether curiosity would have finally got the better of their resolution if this state of affairs had lasted much longer, there is no saying, had not the stranger disposed of that question himself. For one morning a rumour flew round, that he had disappeared, and every body flocked to his house to make sure the news was true. Yes, there was no mistake about it. The enemy had rooted up his pole, and decamped in the night with his scissors, pomatum pots, razors, shaving chair, ("who ever heard before of being shaved in a chair," the neighbours said) napkins and all. A charcoal boy who met him on the road brought in the news that he was told by him, whilst giving him a light for his pipe, that of all the dull places he had ever visited—and he had travelled a deal he'd have him understand—"Our Neighbourhood" was assuredly the very dullest, and that he'd sooner exist for the remainder of his life on pickles and rice elsewhere, than have eels and *saké* three times a day and be obliged to live in such an unfashionable locality. From that day our little friend was himself again. His sprightliness returned. He was as saucy and as full of jokes as ever. If gossip was the staple commodity of "Our Neighbourhood," and had any marketable value, the barber would assuredly drive a roaring trade. But although gossip won't pay *per se*, and is only occasionally an equivalent for a feed of eels and a treat of *saké* from a friend, yet it stands him in good stead, and is a notable addition to his stock in trade. Customers like to see a smiling face and be tickled by a merry quip, whilst suffer-

ing under the tedious and eke painful process of shaving. Shaving forsooth! Scraping—scarifying—skinning. Can any more successful instrument of torture, in a small way, be found, than a Japanese razor—at least to European faces? The Main Street curves outwards a little at the barber's shop, and seems livelier here than elsewhere, in a great measure, no doubt, owing to the crowds of children which hang about the old *yashiki* gates over the way, on either side of which a *Moji Yaki* and an *Améya* have taken up their stations, and between which two attractions a lively crowd of little ones oscillates from morning till night. These old wizards are well worth a passing glance. The *Moji Yaki* or "letter burner," has left the monotony of Chinese characters far behind him, and might claim with justice a high certificate for efficiency in his art. To see him as he runs streams of sweet stuff, up and down, and backwards and forwards again, over his heated copper griddle, and then peeling them off when at the proper degree of brownness, and rolling them up into a basket, cross handle and all,—is very diverting, and would entertain many whose beards have grown. Anon see him dab, dab, dab, round spots of liquid cake, a smaller dab here, and a streak there, a bit of flat bamboo pressed into the row of dabs. Peel off and hey! presto! you have a string of young tortoises swarming up a stick.

The *Améya* is really a genius of a higher order. He combines painting and modelling together. He carries about with him his studio and appliances, and is prepared to execute any order, be it never so difficult. He'll stick you a bit of his tenacious barley gluten on a bamboo joint, and, puff-f-f-f, it's a white glistening balloon—pinch it in at the middle, fashion off the mouth, draw out a bit for a cord, wind it quickly twice round, and back again, tie it into a bow knot, and you have as well shaped a gourd in a few moments as nature ever took months to produce. "Please, Sir! I want a couple of rats nibbling a bag of barley." Ah! My chubby little master, that'll surely puzzle him, you'd think. Not a bit of it. He does not even stop to consider how it is to be set about, but takes in a twinkling out of drawer No. 2, a lump of his plastic material of just the proper size. This he kneads, and rolls, and pulls out into long glistening threads, and rolls up again, and when of the right consistency he dusts it with rice flour, to prevent it clinging to his fingers, and then, giving it a pyramidal shape, pinches out a bit at each side of the apex, snips out with scissors a pair of ears, lengthens out the snout, pulls out a tail a-piece, fashions the cone in the middle into a bag, a couple of dots for the eyes of the rats, a streak of red paint underneath them, a bar of blue below that again, a puff of gold dust and—"Now my little boy, where's your coin? Your rats are finished." But we are forgetting the barber whilst idling amongst the children. His workshop is nothing more than a part of his sitting room, whereon his customers seat themselves when being shaved. He stands behind them during the operation, and has to hand, on a shelf at his right elbow, every thing he may require. In the centre of his shop stands his travelling repository of implements. This is a long narrow chest of drawers about three feet high, and highly polished, upon its summit is a brass basin, and at the side thereof, a wing of the same metal, which holds the unguent. This piece of furniture he always takes with him when he goes to shave the priest, or persons of Quality. It is placed at present, being considered very ornamental in its way, between himself and his son, who is being brought up to the trade, and who is already esteemed a most promising young barber. To see him as he rocks his body from side to side and throws up his shoulder, whilst fine combing a customer, you'd fancy he was dragging the poor fellow's hair out by handfuls. This apparent expenditure of force, however, is only one of the tricks of the trade, and is intended to convey to a bystander an impression of the great haste, necessitated by the crowd of customers, supposed to be waiting their turn to have their hair dressed, and queue tied, their polls having been first scraped clean by the father, who does the shaving, he affirms, because it requires a delicate and practised touch, which only one of his age and experience can hope to attain. See him now operating upon a customer, who holds a semicircular piece of wood below his nose to catch the

the stubble which he shakes off his razor, thereon, as he mows it down. How he flourishes about his instrument! What attitudes he assumes! No razor surely was ever before handled in such an eccentric way. You'd fancy him about to split a piece of firewood, or whittle a stick, and anon his writing a letter, or juggling the weapon from hand to hand. Yet he never makes a mistake, or draws a customer's blood, be his visage never so rugged and intricate. He can attend to several things at once, too. See him interrupted by a neighbour, just as he's shaving out an ear. He can give him the time of day and a merry wink, without intermitting his work for a moment. "Good morning, Mr. Barber, have you heard the news?"

"No, what's about to-day?"

"They've found the young priest who disappeared two months ago."

"No! That's not true!"

"It is true, though. I saw him this morning myself."

"You don't tell me so."

"I did indeed, he was taken out of a well in the neighbourhood."

"Ah! You've burst my liver (*kimo tsuibushita*) I declare, but I always thought he'd come to no good, he used to drink so."

"He never drank at all; for I knew him intimately."

"If it was not drink, then, what else could it be, I'd like to know?" The little man loves to argue by the dilemma.

"He was out of his mind for many days before, bewitched by the fox, it is thought, and the doctor says he has been exactly seventy three days and a-half under water. Well! well! who'd have thought it?" All the time occupied by his colloquy he's been staring at the speaker, with great interest depicted upon his face, whilst his hands are busy with the customer's ear, yet, helix, anti-helix, tragus, lobule, he has traversed them all safely with his razor, and has actually commenced to trim an eyebrow, by the time his friend says goodbye. He has a word for everybody in or out of season. "How hot the weather is," says a sleepy horse boy, yawning whilst waiting his turn to be shaved. "I'm quite exhausted this morning, having travelled six *ri* since daylight, and slept never a wink last night. The frogs in my place make such a noise of nights, that I lie awake and can only sleep in the daytime." "The what," enquires the barber, interrupting the last speaker, just as he's making shift, to assume a posture, which will admit of his taking a nap. "Why the frogs, to be sure, since the rains, with their croak, croak, croak, won't let me sleep. The earthworms I presume you mean? No, how's that?" "Here's a deplorable state of rustic simplicity for you," says the little man, stopping for a moment to chuckle, as he's shaving out a nostril, and grinning at the company who laugh as in duty bound. "Don't you know that the earthworm got his hoarse voice from the carp, who finding it useless to himself under water, beguiled the worm into giving in exchange for it his big eyes, on the plea that as he was continually boring underground, and in darkness he did not require to see? And in good sooth it was a fair bargain both ways, I think. Do you mean to say that you have lived so long, and never heard this before? Why, if it were not for me, some of you would never know anything. I declare it was only the other day that a fellow told me a pitiful story, of how he suffered under a priest's drum, in the same way, and could get no rest, and if I had not explained to him the danger he was in, he might have gone out at night, and got befooled by the badger who every fool knows goes about the country between dusk and daylight, beating his hollow stomach with his paws and imitating the drum, to entrap the unwary. I declare I'm thrown away amongst you. Head a little more this way, Sir! if you please. That's it, Sir! thank you. Now then you're beautifully shaved. Wouldn't you like your eyelids polished Sir? You won't to-day Sir? Thank you Sir? Good morning. Well, come along next gentleman."

### SAILORS' HOMES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 8th November, 1873.

SIR,—The notice in some of the papers concerning the opening of a Sailors Home, has given much satisfaction to many of their readers. The want of such a resort, for this class of men who come in such large numbers to this port, has been a serious one; while the success of similar institutions in many other places, proves the appreciation by the sailors of the benefits they afford.

While the officers of the ships have the *entrée* of every respectable house, the men, many of them intelligent, and most respectably connected, have been compelled hitherto, to walk the streets when they came ashore, or go into those haunts of vice, where the most fearful temptations await them; and we know of cases where the deepest convictions of duty, and the strongest resolutions to resist, have failed to save the poor fellows.

A few hearts have been stirred with sympathy, and a few homes have been opened to welcome them, but nothing commensurate with the necessity of the case, or the claims of so large and important a proportion of the population has ever been attempted in Yokohama before. The success that has attended such efforts in other places, is a guarantee for this, if the same energy, and liberality characterizes its management.

Some facts that have come to our knowledge, give the greatest encouragement to extend to the sailors the hand of kindness and prove that they are equally, if not more susceptible to good influences, than any other class. One may be given here. A man went from this port a short time ago to return to his friends who, nearly thirty years since, left them in the deepest disgrace. Ashamed of the dishonour he brought upon a family occupying an honourable position in society, especially a brother who was a prominent clergyman, he took an assumed name and through all these long years of expatriation from his country and kindred, he has been a wanderer and a drunkard. On the ship which brought him to this port, and in this place, he met friends who took him by the hand and encouraged him to hope for a better future. At last he was made to realize the folly of the past, and to turn his footsteps into wisdom's ways. A totally changed man, he made a profession of his faith in Christ, and taking the almost forgotten name of his youth, he was received into the Church at the age of nearly sixty. He has now gone back to his friends, who have followed him with their yearning prayers, and who will be gladdened by his return.

How much those sailors who desire to shun evil companions welcome such a place, is shewn by the fact that, although there has not been sufficient time to make the necessary preparations for their comfort, they are willing to lie upon the floor and to take the simplest fare, if they may but remain in the house.

The Home, or "Temperance Hall" as it is called, will be comfortably furnished, and provided with everything desirable to make it attractive and pleasant. We hail this movement, as a hopeful inclination that the spirit of a wise philanthropy is growing in this community; and knowing that it is in the hands of disinterested, and judicious persons, we confidently anticipate for it, great success.

I am, Sir, &c. &c.

A FRIEND TO THE SAILOR.

## Law & Police.

### IN H. B. M.'S COURT AT KANAGAWA.

FRIDAY, 31st October, 1873.

Before N. J. HANSEN, Esq., H. B. M.'s Acting Assistant Judge.

W. P. KRST v. BLACK (J. R.)

This was a suit to recover the sum of \$93.99 cents, as commission for procuring defendant a two-feeder printing machine from England.

Each party conducted his own case.

Plaintiff deposed that in January and February, 1873, he had several conversations with defendant, who then desired to sell his interest in the *Daily Japan Gazette*, and confine his attention to the

*Nishin Shinjishi*, a daily newspaper published in Japanese, which also belonged to him. Plaintiff suggested, (as Mr. Black stated that it was the Government organ and a future daily circulation of 1,100 copies had to be provided for,) that he should get out a two-feeder machine from England to enable defendant to meet the anticipated demand, and offered if necessary to give six months' credit, if the machine was secured to him, the other portion of the plant of the *Nishin Shinjishi* together with that of the *Far East* and *Japan Gazette*, being then under bill of sale to the Oriental Bank. Mr. Black stated that he would not require credit, but would pay on arrival of the machine. Plaintiff therefore ordered out one from his London correspondents, Messrs. Lilly & Co., with whom he had previously dealt. On the 25th August, he accepted a bill payable three days after arrival of the *Cassandra* at Yokohama, against the Bills of Lading of the machine, and notified defendant of its arrival, subjoining to his letter a copy of the invoice which amounted to £206. 14. 10. The draft had been posted *via* America, whilst the advices from Lilly & Co. were mailed *via* Southampton, so that they had not come to hand when the draft was accepted by plaintiff, and the latter had therefore to obtain a copy of the invoice in the hands of the Bank. Mr. Black replied to the notification, demurring to payment on a short notice but agreeing to pay on its arrival. (Letter read to this effect.)

On the 5th September, defendant promised plaintiff on meeting him to take up the machine as soon as he had settled with Mr. Vernede about a transfer of the *Gazette*. On the 22nd September, plaintiff wrote to Mr. Black that as nearly a month had elapsed since he notified him of the arrival of the *Cassandra*, he wished to enquire what defendant proposed to do about the machine. Plaintiff thought it very hard upon him to have the draft protested against him, as he had only charged defendant ten per cent commission for his services, which certainly would not cover any loss of credit by him in London, through defendant's inability to fulfil his promise. On the 28th September, he waited on defendant when the latter promised to take up the bill next day. This promise was also broken, and plaintiff then wrote threatening legal proceedings to which plaintiff replied asking for a description of the machine. Mr. Moss called on Mr. Kent at a late hour on Sunday night and requested further particulars which the latter declined at the time to afford.

Cross examined: He had shewn Mr. Black price lists of various makers which named £300 as the price of one and two feeder machines. This did not include extras which ran from £25 upwards or freight and was for a machine smaller. The machine itself cost £400 new. He bought it for £150, being a reduction of £20 from the price asked. £16. 11s. had been charged for extras, £10 0. for packing and £30.3.10 for freight. His correspondents had fixed it up in London, thoroughly examined it and run it three days before taking it down to pack. It would in their opinion last many years by running it at 2000 to 2800 copies an hour.

For the defence, Mr. Black admitted that conversations had passed between him and plaintiff but denied giving a direct order to him. Plaintiff had named the sum of \$1500 as the probable cost of a machine out here. He understood he was to have had a new one for that sum. After Mr. Kent had written home, he (defendant) learned for the first time that plaintiff considered he had given a direct order, but as he needed a machine did not object. No direct application had been formally made to him for the sum claimed, the first notice he had of the amount being the summons. He believed when he wrote the letter of acceptance after the arrival of the *Cassandra*, he was to have a new machine.

His Honour enquired what had become of plaintiff's letter.

Defendant replied that it had been mislaid by Mr. Moss, when plaintiff expressed his willingness to consent to an adjournment to allow of its being produced.

Defendant denied that any mention had been made of a Bill of Sale on the machine, and asserted that the plaintiff had offered unconditionally to give him credit.

Eventually an adjournment was ordered till next day to enable search for the missing letter to be made.

*Saturday, 1st November.*

On the case being called on for hearing, Mr. Black stated that the letter was not forthcoming, that he had always been willing and still was willing to take up the machine, and pay plaintiff his commission. He complained, however, that no formal demand had been made for it.

Plaintiff argued that two interviews and three or four letters were ample notice to defendant.

His Honour entered judgment for plaintiff without costs, as he

should have written a letter formally demanding his commission as well as those sent which chiefly regarded taking up the bill.

Mr. Black: Your Honour, am I obliged to take the machine now?

His Honour: I have done with the case.

#### IN CHAMBERS.

Before N. J. HANNEN, Esq., *Assistant Judge*.

Nov. 1, 1873.

SMITH and WYNN v. BLACK and WILKIN.

The defendant in this case, W. Black, appeared in answer to a judgment summons on adjournment.

Mr. Ness appeared for the creditors.

In the course of the evidence, it transpired that the defendant had received the summons of the Court on the 14th August, and had made an assignment of his interests in the business to Wilkin, the second judgment debtor in this case, as he alleged, for the benefit of his creditors.

On the conclusion of the examination of the debtor, Counsel for the creditor applied for a commitment, under the rules of procedure, and under "The Debtors' Act, 1869," on the ground that a fraudulent assignment had been executed since the date of the judgment, and that it had been abundantly proved that the debtor had had the means to enable him, and still neglected, to satisfy the judgment.

Counsel further remarked that his clients had been pressed to adopt these measures in consequence of the debtor's continued attempts to evade payment of the judgment debt, and that even now they were willing to listen to a proposal on the part of Black to meet his liabilities.

His Honour decided to adjourn to the 6th inst., to give the debtor an opportunity of paying one-third cash and to give approved acceptances for the remaining two-thirds, failing which, an order would at once be made.—*Herald*.

#### IN H. B. M.'s PROVINCIAL COURT.

Before N. J. HANNEN, Esq., *Acting Assistant Judge*.

November 6th, 1873.

SMITH and WYNN v. BLACK and WILKIN.

Mr. Ness appeared for the creditors in this case; Mr. Dickins for the debtors.

Mr. Ness urged that the debtor should be committed on the ground of having made a fraudulent assignment of his interests to the prejudice of his judgment creditors.

Mr. Dickins stated that his creditor had been injured by the protracted proceedings in this case. Judgment was given four or five months ago and as yet nothing had been done. The creditors had entered the premises of a solvent partner and had placed a man in charge of his property. Mr. Cheshire, accountant, had made an offer on the debtor's behalf. It had been agreed to deliver to the creditors the defendant's share in the business. The assignment made by the defendant conveyed not only his own share but that of his partner. (The document states a *fourth interest*.) A proposition of payment, secured by promissory notes endorsed by Mr. Batavus, had been made and refused, on the ground of the debt having in the meantime increased while no bill of costs had been presented. It was arranged before the Dutch Consul that, after paying the sum due to Black, Batavus & Co., the residue should be handed over to the creditors. This was declined by creditors' counsel. His client had been ruined by this action. He submitted that it could not be proved that a malicious intention to defraud his creditors existed on the part of his client, and read an affidavit of one of the creditors to this effect.

Mr. Ness contended that the effect of the assignment was to defraud the creditors, and that it had been made before anything was done before the Dutch Consul.

Mr. Dickins applied for an adjournment to allow of his client's books being produced.

The Judge remarked that several adjournments had already been granted for the same purpose.

Mr. Cheshire, examined by Mr. Dickins, testified that \$200, cash, had been offered; balance in promissory notes. He had seen nothing to induce him to suspect fraud.

In reply to Mr. Ness, he stated that the creditors had refused to accept the terms of Mr. Black's offer.

Mr. Black, examined by Mr. Dickins, stated that his property was worth about \$900 on beginning business. The value of the goodwill at No. 10 was about \$500.

Mr. Ness observed that his clients were not actuated by any

harsh feeling towards the debtor, but had been forced into their present course of action by his apparent determination to resist the payment of this claim. When the action began the receipts of the business were \$1,500 with a stock of \$8,000, and Mr. Cheshire's evidence showed that there was a balance in favour of the debtor. It was alleged that the assignment, made on the 15th instant, to the second judgment debtor was for the benefit of the creditors. The person who signed the affidavit was not present to give evidence and this diminished its moral value. All sorts of frivolous pretexts had, throughout the proceedings, been urged with the view of escaping payment of the debt. He asked for an order for commitment forthwith.

The Judge said that he could not, in the face of the affidavit, consider that any intention to defraud existed, nor did he think the allegation that the debtor possessed sufficient means to discharge the debt was substantiated. He therefore refused the application.

(Compressed from the *Japan Herald*.)

#### IN H. B. M.'s PROVINCIAL COURT.

Before N. J. HANSEN, Esq., Acting-Assistant Judge.

6th November, 1873.

W. P. KENT v. J. R. BLACK, in the matter of A. S. VERNEDE.—This was a motion for a rule calling on the defendant to shew cause why he should not be ordered by the Court to pay plaintiff the sum of \$620 (an amount recovered by him against the defendant Verne) out of certain indebtedness on account of the *Japan Gazette* to its proprietor.

His Honour granted the rule.

#### LOSS OF THE "ARIEL."

##### COURT OF INQUIRY AT THE AMERICAN CONSULATE.

This morning a Court of Inquiry, called by the Agent of the Pacific Mail Steam-ship Company, was held at the United States Consulate, to inquire into the circumstances attending the loss of the P. M. S. S. *Ariel* on the 27th ultimo.

The Court was composed of the following gentlemen:—Geo. N. Mitchell, Esq., Acting-Consul, President; Chas. J. M. McDougal, Commander U. S. Navy and senior naval officer present; Capt. J. D. Carroll, and Capt. J. M. Batchelder.

The first witness called after clearing the Court, was—

Captain Newell, who said: He had been at sea nearly 18 years. Was in command of the *Ariel* at the time of the accident. Left this port at about 6 p.m., 26th Oct. Steered the usual courses down the bay, nothing of any note occurring. Passed Cape King at about 10 p.m., at that time northerly winds prevailed. Passed Cape Inaboye at half past 9 a.m., on the 27th. After sunrise, the wind increased from the N. N. W. After passing Inaboye, the wind was still increasing, and sea rougher. On this account he deemed it advisable to keep closer in to the land. Kept the ship on a northerly course, and continued on that course until 7 p.m. After this hour, he changed the course of the vessel one point to the eastward. Made the high land, as he supposed, off Cape Nakuna, close upon 7 o'clock. At half-past eight they were abreast of the cape before mentioned. As he judged, on referring to the chart, and by the bearing of the land, he was about five miles off. At half-past eight changed the course to N. E. by N. Kept on this course until a few minutes to nine o'clock. They were abreast of Toyeyama Point. He judged they were at least four miles off. As a precaution, ordered the hand-lead to be cast over. The first cast, the leadman reported thirteen fathoms. But subsequently he got no bottom at all. Then changed the course to N. N. E. This was about nine o'clock. Were just passing Toyeyama Point, after cautioning the officer of the deck to keep a good look-out, when he went to his room, some five minutes afterwards. Witness told the officer to note the time when Toyeyama bore west. Was sitting in a chair reading the newspaper when the ship struck, it might be some eight minutes after entering the cabin. He immediately went on deck, straight to the engine-room, and enquired if the ship was making any water. He thought by the feeling that the ship had slid over a reef. The engineer reported that she was making no water. He, in consequence, ordered him to go ahead. Almost immediately after having given the order "to go ahead," he felt sure she was on a reef by the peculiar rolling.

To Court: He could not say positively whether it was a reef or a sand-bank. At the time he thought it was the latter. The Japanese said it was a reef.

Continuing, witness said that: On finding she was on the reef, he countermanded the first order, and ordered the engines to be backed.

Had been backing some two minutes perhaps, when the engineers reported that the ship was making water very fast. Witness ran to the engine room door, and he believed it was the chief engineer who reported that the water was up to the fires. Ordered the engines to be stopped, and all to assist in getting out the boats. All assisted, and the boats were got into the water. He meant by "all," the whole crew. Everyone was on deck running about. The boat the second officer had charge of, was down first. He put some 15 or 20 persons in this boat; he did not count them, telling them to pull in to the land, and try and get assistance. They had thrown up rockets when the ship first struck, and burned blue lights. No gun was fired. Next followed immediately after a boat in which was the purser, an interpreter, and some passengers. The last boat which was lowered was the gig. Just as she cleared the davits, the stern went under water. There were in it sailors, the first officer, and some others, but could not say who they were. Told the first officer to take some people still remaining on board, and transfer them to the other boats—those which could hold them. Just as they left the deck, as he had said, the stern went under water, and as the men ran forward, the water followed them up as far as the paddle-box.

To the Court: All the passengers except one, Capt. Bakiston, had left the ship by this time. He ran forward as the others had done.

Witness expected the vessel would soon settle down by the bow, off the reef, and so got into the boat and left her. As soon as they were all in the boats, he told them to pull to the shore. They found a landing on the south side of Toyeyama Point—a small fishing village, called Toyeyama. Witness's boat was the fourth to get to the land. The two behind him could not find a landing place at first. Found the second officer had discovered some fishing boats and their crews lying in to the land. Witness saw him take the few sailors he had in his boat, and some of these men, and go off to the ship again. He had just started when witness arrived. Witness took a fishing boat, and went off also with two quartermasters. Just outside the shore there is a line of rocks. It was here he first saw the chief officer. It was difficult to get the boats through them to the land. But soon after the Japanese lighted fires, and they could see their way better. He told the chief officer to get into another boat and go off to the ship, to try to save anything he could, which he did. When he got to her again, he found the second mate was there in his boat; but he could not get his sendoes to go alongside the ship. Witness, however, induced his sendoes to go alongside, by catching hold of a rope which was hanging over the bow. The two quartermasters, three sailors, and himself, succeeded in getting on to the deck by the bow. None of the other boats would go alongside at all. He supposed it was because the ship was rocking about a good deal. He told the quartermasters to enter the rooms and take all the clothing they could. At this time there was an easterly rolling swell prevailing. After getting what clothing they could out of the forward rooms,—the only ones which were out of water—it was thrown down into the boats; they next got some beef, which was hanging up beneath the deck, and passed that down also into the boats.

To the Court: The after end of the ship was under water at this time. This was about two hours and a half after she had struck; after they had got back to her a second time.

Continuing, witness said that the ship was making some very heavy rolls, and he was much afraid she would go down, so descended to the boats. Remembered when they landed, looking at his watch; it was three o'clock in the morning. Never saw the ship afterwards. Went out again about the break of day, and at sunrise discovered one of the mastheads.

To Court: Had been in the service of the company since the month of August, 1866. Did not receive, on leaving this port on the 26th, any instructions. Had made some twelve passages between here and Hakodate. Made no difference in his steering on this occasion, except in going a little to the northward on account of the breeze. Had observed no currents setting in-shore, only one that, on the contrary, put them off. They were, when the ship struck, about two and a half miles from shore. Could see nothing of the land, although it was a starlight night, and moon very clear. Could not see any rock visible. In coming down he should steer about the same. Passed Inaboye about two miles to the eastward. The current after passing Inaboye is lost. After passing Inaboye, in summer, there is a little southerly current in-shore. Was going some eight knots at the time. Had not much confidence in the report about there being thirteen fathoms, going as they were at that speed, so kept him going taking soundings. After passing Cape Nakuna, could see the land all the way until the ship struck, or

slightly so. The third officer was on deck when he went below. The officer could see the land.

To Com. McDougal: Had no special instructions as to the distance to be kept from the land.

To Court: Kept nearer in to the land on account of the rough sea, so as to get smoother water. Did not think he had ever been so close in to the land in going up before; might have been in coming down. It was not more than half a minute before he got to the engine room. Afterwards he started forward. There was not a breaker to be seen at this time, or a swell. As they had struck, had the lead hove over, and found two fathoms, near the fore-rigging. Twenty minutes after the ship struck, every one had left the ship.

Court here adjourned till two o'clock.

On resuming the case, Capt. Newell was requested by the Court to point out, on the chart, the course he had pursued on his voyage from this port on the 26th ultimo.

Accordingly he proceeded to explain to the Court, succinctly, the course he had followed. This terminated the witness's evidence.

Re-called: He said that he was aware of the position of the ship at the striking. Although he thought he was far from land, he threw the lead, more from habit than anything else.

John James Grant, sworn, said he had been to sea during the last eighteen years. First entered the Pacific Mail Steam Company's service in April last. Was second mate on board the *Ariel* when she left this port on the 26th ultimo. He was on watch when the ship struck. First saw the land when he went on watch at six o'clock. The weather was slightly hazy that evening. Sighted Cape Nakuna about eight o'clock. The moon had set that night, he thought at about half-past eight o'clock. The captain was on the main deck before he went below. They could see land on the port bow. The ship struck at about ten minutes past nine o'clock. Witness said that at six o'clock the course of the vessel was north. It was altered before they saw Cape Nakuna. The Captain had told him before going below that if they got anywhere near the Cape, to call him. He did so, at half-past eight o'clock, when the course was changed to N. E. by N. Before the ship struck, the course was again changed to N. N. E., some seven minutes he should think. The captain gave the order. The ship was bearing about west off Cape Toyeyama when she struck, at ten minutes past nine o'clock. The lead had been thrown some eight minutes before; had no soundings. There was a sort of cross sea and northerly wind, with an easterly swell, when the vessel struck. Witness was on the bridge at the time. Could see the land distinctly. He could see no breakers between the ship and the shore. The direction of the wind was, and had been from leaving port, N. N. E. Considered that they were four miles away from land when the vessel struck. When she struck he was on the bridge, on the look-out, and the captain came up and ordered the wheel to be put hard to port. The room was quite close, and heard the captain give orders to reverse the engines, and to get the boats in readiness for lowering. Did not hear any order given to go ahead. He was next ordered to lower the boats, which was done, and precautions taken that there should not be too many in one boat. There was a very strong

current setting southward on the night when the vessel struck. The discipline on board was very good—every man in his place—at the time. It was as good as on any vessel he had been aboard of. Had been, he thought, nearer in to the land, at that particular point, than on the occasion of the vessel striking.

William Kleuth, sworn, said that he was a quartermaster on the *Ariel*. He was at the wheel at six o'clock on the evening of the wreck. He left it at eight o'clock. Had altered his course once during that time. From six to seven o'clock he had steered north; after that, N. by E. He then went forward to the look-out where he could see land, on the starboard bow. He was ordered by the Captain to leave the lead at about nine o'clock, he got thirteen fathoms. Cast it about five or six times. Afterwards went forward. He was on the look-out when the ship struck. He saw no broken water between the vessel and the shore at the time. There was not much sea, but a big swell. There was a good breeze, nothing uncommon.

To Captain Carroll: Before the ship struck, he had got about eleven fathoms.

To Com. McDougal: He should think that they were about four miles from the land, when the ship struck.

To Court: Had been on the Hakodate route some twelve months, but could not say whether they had ever been so near Toyeyama Point before.

(To be continued.)

The Court, at the termination of the inquiry, deferred giving its decision until to-morrow afternoon, at two o'clock.—*Japan Herald*.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, NOVEMBER 8TH, 1873.

THE *Menzaleh* with London advices to the 12th September, arrived on the 3rd instant. The *Avoca* arrived on the 8th instant, and brought advices to the 19th September. The departures are the P. M. S. S. *Great Republic*, for San Francisco, on the 2nd instant, and the P. & O. steamer *Madras*, for Hongkong, on the 4th instant.

The cargo of the *Mikado* has been delivered. The *James Paton* and *Lord Ashburton* from Sydney, have brought further supplies of coal. The *Parrenio* proceeds to Hiogo to load for an Australian port, it is said Adelaide. This colony seldom, if ever, receives direct shipments as its supplies of grain are usually drawn from Melbourne.

The transactions of the closing week are, in almost all branches of business, on a weaker scale, and the chief staples are neglected, or but little dealt in, if reliance may be placed in reports from the usual sources. An increase is observable in cheap cloths and in sundry articles of season's trade which figure to a slight extent in the weeks business.

On the whole, the feeling of the market is heavy, and depressed by the unsatisfactory intelligence of recent date which has been wired from London. The Community is anxiously awaiting the results of the representations of the Foreign Ministers.

**Cottons and Cotton Fabrics.**—A considerable decline in the sales of *Shirtings* is observable in this week's returns without any intelligible cause being apparent. The influence of the receipts from Hongkong, and the knowledge that latest telegrams exhibit a large increase of shipments from home can scarcely account for it when we learn that stocks in native hands are by no means excessive, and the falling-off is unexplained. All numbers are easier:—8½ lbs., goods cannot be quoted at much more than \$2.65—though a higher figure is named. Total sales reported are 15,600 pieces. *Taffachelass* is slightly better, but a decline must be reported in *Velvets* which, owing to augmenting stocks, are heavy at easier rates. No other article demands especial notice.

**Yarns.**—Business in Yarns shews no improvement on the transactions of the preceding week and numbers 3 and 2 may be quoted easier. The small stocks existing of No. 1 enable holders to secure more satisfactory prices.

**Woollens and Woollen Mixtures.**—No improvement in these goods may be recorded during the present week. The demand still continues weak, and such business as has taken place has not led to any advance in prices.

**Iron and Metals.**—The settlements of iron during the past week have been exceedingly limited. Some 25 tons *flat* and *round* and 50 tons of *nailed* have changed hands at undernoted quotations, leaving stocks as follows:—350 to 400 tons *flat* and *round*; 300 to 350 tons *nailed* and 25 tons of *hoop*. The sale of 200 boxes of *Tin Plates*, to arrive, is also reported.

**Sugar.**—Further arrivals have increased stocks of Formosa, prices for which have in consequence weakened.

China kinds remain as last quoted.

**Rice.**—Saigon grain is unsaleable.—Good Japan cargo quotations are nominal, no stocks existing here.

**N.B.**—The accuracy of our quotation of \$1.70 to \$1.80 in our issue of the 1st November having been impugned, we must explain that this was the price at which a parcel of Japanese rice actually changed hands, and that, though nominally higher rates prevail, quotations have been for speculative bargains only.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**Silk.**—Since the 1st instant arrivals are 650 bales and purchases amount to 560 piculs, a large portion of which will probably be rejected after inspection, the demand being mostly for fine sized Silks which are scarce.

**Silkworms Eggs.**—Owing to some cause which is not well ascertained, the daily reports of arrivals and sales got up by the native administration have proved during the last fortnight entirely unreliable. Placing our trust in the statements of some of the leading Japanese dealers, who having nearly realized their stock are now disinterested enough in the question, we may say that total arrivals to date are 1,275,000 to 1,300,000 cards, and settlements 1,150,000 to 1,200,000, leaving an unsold stock of about 100,000 cards.

There is now a growing opinion that the export of this season will probably not be much in excess of last year which was 1,280,000 cards. We quote

Oshiu, ... ..	\$1 50 to 2.60	Koshu, ... ..	} \$1.10 to \$1.50
Sinchu, ... ..	\$1.40 to 2.00	Goshu and other sorts, ... ..	
Joshu and Bushu ... ..	\$1.30 to 1.85		

Fine choice cards of any description are scarcely to be found at all, and our lower quotations only apply to the refuse of the market.

**Tea.**—Our market has shown a steady and active demand for this staple: Settlements for closing week amounting to 2,400 piculs, which would have been on a larger scale, but for the increasing demands of native holders, and which are in no way justified by latest telegraphic messages from New York reporting a still disturbed state of financial matters in that city. Supplies come in on a scale merely calculated to replace purchases, and it is evident that some coalition or official regulation is at the bottom thereof: Stocks at present here are not more than 4,500 piculs of all classes.

## SEVENTY YEARS OF SUCCESS

Have proved beyond question that

### ROWLANDS' MACASSAR OIL

In the best and safest Restorer and Beautifier of the Human Hair. Perfectly free from any poisonous or mineral admixture, its certain good effects are lasting even to the latest period of life. It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandruff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 6d., 7s., 10s. 6d., and up to four small, and 21s. per bottle.

### CAUTION.

Each Bottle has a GLASS STOPPER, instead of the Cork as formerly. All with CORK are SPURIOUS IMITATIONS. This Notice is deemed necessary, as the Proprietors have received intimation that a large quantity of Counterfeit, of the most pernicious quality, has lately been sent from France and Germany to India and the Colonies under their names.

### ROWLANDS' ODONTO,

Or PEARL DENTIFRICE, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipient decay and polishes and preserves the enamel, to which it imparts a PEARL-LIKE WHITENESS.

### ROWLANDS' KALYDOR.

An Oriental Botanical Preparation. This Royally-patronised and Ladies' esteemed Specific realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling, and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle. Sold by all Chemists and Perfumers, and at all Bazaars throughout China and Japan.

### ROWLANDS' ESSENCE OF TYRE

never fails to produce immediately a perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Black, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle.

All these articles have been used and justly appreciated by all the Sovereigns and Courts of Europe, the Pope of Rome, and the aristocracy of the world, during the last seventy years, being of inestimable value to those who have once used them. They are sold by all Chemists, Perfumers and Bazaars throughout India, the Colonies and South America.

## KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

## KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESITIN AL OR THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all Chemists.

CAUTION. - The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

## Notes of the Week.

WE are pleased to see that the arbitrary Regulation so thoughtlessly put out by the local Commissioner of Customs, refusing to entertain any application for a refund of duties overpaid after a lapse of ten days, has been effectually checkmated by a Notification from H. M. Consul to the effect that the British Minister declines to recognize the Regulation and "disputes the right of any local Japanese officer to deal in this arbitrary manner with questions affecting the rights and property of British subjects."

A more preposterous Regulation than that referred to never was issued, and we trust the author of it will be visited with the severe censure of the Central Government.

As Sir Harry Parkes was riding a few evenings ago from the Railway Station, some time after night-fall, his horse stumbled over the gravel thrown up in face of a trench some fifteen feet long—i.e. nearly half across the road—and seven feet deep, and threw his rider into it. The night was dark, no lantern indicated the existence of danger, no rope was stretched to prevent an accident, and if the Japanese contractor had laid an ingenious plot for the British Minister's life or limbs, he could hardly have succeeded better than he did in entrapping his victim. Fortunately, beyond the inevitable shock and shaking incidental to such an accident, no harm was done, and the Japanese may be as thankful as we are that their carelessness had no worse results. But can anything more effectually demonstrate the careless, thoughtless manner in which public business is too often done here than this occurrence? The Japanese may rely on this, that if limb or life be lost by an accident so preventable and arising from causes so reprehensible, they will have to pay a very heavy sum for indemnity, and if they are wise they will place themselves beyond the risk of such claims.

THE recent carriage accident which befell the Empress, her Mother and one of the ladies of the Household, shows the necessity for far more care and thought in regard to the new powers the Japanese are getting into their hands than they seem inclined to give. It is only the other day that the distinguished author of the Memorial we published last week, Kido Takayoshi, was severely injured by being thrown from his carriage. We then had the loss of the steamer *Columbine* while under Japanese command. Then came the accident of last week, and a trench left unguarded across a highway completes the chapter of misfortunes by giving Sir Harry Parkes a bad fall from his horse.

All these things show a want of thought and thoroughness. No pole-strap has any business to break if proper care is taken of harness; and if native master mariners or engineers cannot manage a foreign built vessel they should not be entrusted with it. Our interest in this country forbids our submitting with any patience to the idea of preventable accidents to exalted personages or statesmen on whom the hopes of the Empire in some sort depend, and we must be pardoned as Englishmen for a protest against a neglect of reasonable precautions which gives our Minister an annoying fall, and may bring any one of us a broken neck or limb. These small occurrences—small only by good fortune—are characteristic and illustrative, and the Japanese should glean serious lessons from them.

It is only a few weeks since we published Mr. Edkins's advice to the Japanese to adopt our prepositions and form of con-

struction, and a response has already been made to the appeal. The "Exercises in the Yokohama Dialect," which have been sent to us by the anonymous reformer, appear to be to some extent framed upon the proposed model. We shall take an early opportunity of reviewing this little work at the length it deserves, but would, in the meantime, be glad if any observant dilectician could afford an exposition of the phrase "a 'spire' round the bay" which occurs in the English portion. Can it be a *tower* that is meant? We have heard "tour" so pronounced by persons whose education had been conducted in the dark ages when School Boards were as yet unknown and "*French in a Fortnight*" was an accomplishment that men wot not of. Perhaps "spire" is an analogy arising out of a corruption.

A dinner is to be given to Mr. De Long this evening by the American and Dutch residents in acknowledgment of their appreciation of his services as their representative at the Court of Yedo, and in token of the cordial feelings entertained towards him. Some disappointment has been expressed that the invitations were restricted to the nationalities named.

ONLY one more of the claims against the *Hans* (Pitman *v* Tsugaru *Han*) still remains to be investigated and it is proposed to hear it on Tuesday next, 18th instant. We purpose furnishing our readers with a resumé of cases which have been recently heard in a future issue.

THE Japanese steamer *Migoto* left Yokohama on the 2nd instant, and when off Rock Island on the afternoon of the 3rd, the Captain noticed signals being made from the light-house to the effect that there was a ship in distress to the eastward and well within sight of the light. Though it was blowing very heavily at the time, and the sea was running as high as it usually does in that neighbourhood except in a dead calm, Captain GORLACH at once ran down to see if he could render any assistance. The vessel proved to be a Japanese junk loaded with saki and other native merchandize, thirty-three days out from Kobe, and bound for Yokohama. She had lost the greater part of her stern and was drifting upon some rocks to leeward of her. As the wind had fortunately moderated sufficiently to allow the steamer to pass a hawser to the disabled vessel, she was taken in tow and left in Simoda; after which the *Migoto* proceeded on her voyage.—*Hioogo News*.

THE following notification of importance has been issued by Iwakura, and it is well that foreigners should know it:

"As formerly when a debtor failed to pay his creditor at due date, great delay often took place before any legal steps were taken, thus causing great difficulty in giving judgment it is now laid down as law that:—

1.—Salary for teaching, hotel charges, brokerage, price of food and drink supplied, bargain money or advances, money for goods bought, money lent, wages of coolies, &c., money due to theatres, actors or musicians—application must not be delayed over six months.

2.—Medical fees, salaries to scholars who assist their teacher, money lent or articles supplied by shopkeepers to customers, application must not be delayed over one year.

3.—Payment for rice or money lent for a specified term with its interest, money advanced on merchandise with its interest, money lent on mortgage (and some other matters not interesting to foreigners), application must not be delayed over five years."—*Gazette*.

WE observe the names of His Excellency Viscount de San Januario and *suite* among the late arrivals at the Grand Hotel. His Excellency is we believe Governor of the Settlement of Macao, and has been accredited as Minister Plenipotentiary from the Kingdom of Portugal to this country.

VISCOUNT DE SAN JANUARIO and *suite* proceeded yesterday to Hamagoten, where they will reside for the present. His Excellency will be presented to the H. M. the Mikado next week.

THE colours of the various men-of-war in harbour were hoisted at half-mast yesterday in consequence of the receipt of the official intelligence of the death of Rear Admiral Winslow of the United States Navy, and at noon thirteen guns were fired from the *Seco*.

AN earthquake occurred at a little before six o'clock this morning. It was of short duration but severe.

#### THE MEMORIAL OF KIDO TAKAYOSHI.

ONE of the chief difficulties experienced by a European in criticising a paper such as that which we published last week under the above title consists in estimating the force with which it appeals to the Asiatic mind. Under phrases which seem to the critic to cover a minimum of thought the Asiatic may discover a deep meaning which certain associations with the individual words may have imparted to them. In illustration of this we would adduce the case of the Confucian writings which have moulded the mind of the Chinese nation as no national mind ever yet was moulded; and in view of what seems to a European their extreme baldness and want of profound thought, the astonishing effects they have produced will ever remain among the most singular problems presented by the mental history of mankind. In vain does the student explore and ponder upon these writings, even with the assistance of the most ample notes and acute commentaries by European sinologues. He rises from their study impressed with the hopelessness of finding any profound wisdom in them, or of understanding how they should have produced the wonderful results which undoubtedly have flowed from them. The form and colour of the Japanese mind approximate far too closely to those of the Chinese for it to be possible that any written manifestation of the former should not present difficulties analogous to those of which we have spoken, and although we seem to miss in the one the neatness, condensation and love of prescribed *formula* which we find in the other, a strong and unmistakable likeness proclaims their kinship and common origin.

Regarding the Memorial before us is this light, we must beware of underrating its possible effects upon the mind of the Japanese, and of imagining that what appear to us its baldness and poverty of thought are equally discoverable by them. It may fairly be presumed that the occasion was one when the writer would put out much of his power, and as his influence over the events which culminated in the Revolution of 1868 was indisputably very

great, if not greater than that of any other man connected with it, we must suppose that the Memorial before us contains some of the most serious reflections formed by one of the first statesmen of this country. His name stands high, possibly without parallel, in the estimation of the people, and, if report speaks truly, the weight attaching to his mind and character is greater than that of possessed by any other of the Imperial advisers. But before entering upon a criticism of such purely political thought as the Memorial may contain, we may fairly pay a tribute to the modest, kindly, considerate and gentle spirit it evinces, qualities which are said to be pre-eminently possessed by its author, though united with the highest courage and determination. It is impossible to overlook in it his loyalty to his Master, his tenderness towards the people, his grief for the bloodshed which attended the Revolution, and his true sentiment of patriotism. The candid avowals he makes of the impossibility of yet classing Japan among the prosperous and enlightened states of the world must have cost him some sacrifice of pride, though he does not forget to rebuke the superficial pretensions of the more shallow of his countrymen who imagine that a mere imitation of the externals of the Western nations is the sign of a solid and equal civilization. But his rebuke, far from being couched in terms of bitterness, is softened by a poetical touch of much delicacy and appropriateness, illustrative of a disposition which neither the labours of the statesman nor the occupations of the soldier have rendered insensible to the beauties of nature, and short as is his Memorial, it contains abundant evidence that he feels a deep sense of the responsibilities attaching to a political career, and an equally ardent wish that his discharge of them may advance the happiness and prosperity of the masses of his fellow countrymen.

It is easy to see that the matters uppermost in the mind of the Memorialist are the Revolution of 1868, in which he took so prominent a part, and the measures which it now behoves the Government to take in order to secure the legitimate fruits of that event. He argues that it was necessitated by the altered tendencies of the age and the new relations which had sprung up between Japan and the Western nations, and illustrates the strength of union, as contrasted with the weakness of disunion, by the homely and familiar fable of the bundle of sticks. It is plain that his mind dwells upon the opposition which the reformers encountered in carrying out their scheme for the unification of the Empire, and wonders that it should ever have been supposed that the old system of rule was abolished for the mere idle pleasure of unnecessary change. He betrays a strong desire to justify the measures of that critical period, and if he lingers somewhat over them, and even recurs to them long after the thread of his argument demands it, it is easy to see that he does so under a deep sense of the responsibility incurred by himself and the reformers in a movement fraught with such momentous consequence to the whole nation.

He then proceeds to what may be called the constructive portion of his task, and, as an introduction to this, he refers shortly to the Parliamentary system as known to us in Europe. But he concedes that Japan is in no sense ripe for such a form of government, and that meanwhile the Sovereign must anticipate by his own discernment the wishes of the people and entrust the execution of those wishes to the officials. It is not easy to restrain a smile when he expresses his belief that the importance of the business transacted by the executive of Japan is not inferior to that of the great Governments of Europe

and America, but allowance must be made for the necessity felt even by a statesman of KIDO's position for the wrapping of some bitter medicine in a rose-leaf. He then passes on to the origin of laws, which, he argues, are the offspring of a Constitution previously laid down as the basis of all duties on the one side and responsibilities on the other, and which he insists should therefore be characterized by the ripest care and consideration, in order that it may at least afford room for the growth of every new measure which the natural progress of affairs or events may necessitate. He urges that "in the case of a country where the Sovereign goes to meet the wishes of the people, the greatest care must be taken to conjecture them with accuracy, the internal condition of the country must be profoundly studied and a wide view taken of the national industries. Then comes the most important point of all, and that is to suit the measures to the degree of civilization of the people." He proceeds to show how necessary it is that the growth of a nation should be attended by a sequence of measures so ordered as to represent that growth and place it upon solid foundations; he rebukes the tendency to shallow views of national progress and prosperity which he cannot but see in the generation he addresses; and shows how grievously the people have been irritated and perplexed by a constant succession of new and contradictory measures, urging that such laws have been promulgated without due consideration. He then points out that the condition of affairs since the Revolution has changed so much that any mere mechanical adherence to the five-clause Constitution of 1868 would be absurd in the face of new and unusual difficulties for which it was never intended to provide, and shows how detrimental to good government is the tendency shewn by two or three of the great departments of State to monopolize the general functions of government, and thus minister to the personal ambition of aspiring statesmen, instead of subordinating their efforts to a harmonious central action which alone can ensure security and order.

We have thus epitomized—at greater length than we intended or than perhaps was necessary—the Memorial of which so much has been spoken both among natives and foreigners, but we must plead in excuse that no pains either to writer or reader can be spared at a moment when so great a question as that of the future of the Empire is under consideration. But can we trace in the Memorial the outline of any future political edifice fitted to replace that which the Revolution destroyed? Perhaps it may be unfair to expect as much as this in a manifesto which is rather a justification of past action and a criticism upon the present condition of affairs, than an outline of the steps which should be taken in the future. There is much said of rights and liberties, of constitutions and laws, but we imagine the words in the sense in which we employ them have little or no meaning among the Japanese. They have customs and regulations and criminal laws in a crude form; but of rights and liberties, as possessions won from their masters by the people, or of a Constitution which is a law to the king and a safeguard to the people, they assuredly know nothing.

Undoubtedly, the central and constructive idea embodied in the Memorial is to be found in the passages where the writer speaks of the necessity for the establishment of a code of laws, and especially of laws to which the officials are amenable. He is convinced that there can be no real progress in Japan until both officials and people are subject to such laws, and that the people will never rise to a real comprehension of the words "rights and liberties" until, by having a law to appeal to, they

gradually gain it. And this is unquestionably a statesmanlike view, worthy of the reputation of its author, and of far more gracious recognition that it has received at the hands of the *Japan Herald*. We fully admit the difficulty of understanding the force of these Asiatic theses, but it would have been better had the critic in this case started with the probability that when a man of KIDO's reputation addresses the country, he does so with a definite purpose, and not without some thoughts which are applicable to its condition and hopes.

The fact would seem to be that Japan abandoned her feudal institutions far more on account of apprehended dangers from external foes than because she had outgrown them. KIDO says "The truth was there was no change made which had not become unavoidable, chiefly owing to the internal condition of the country, but also, though in a less degree, to our relations with foreign countries." But we suspect the latter reason had far more weight with the reformers than he appears willing to allow. They were afraid that the disintegration of the Empire would result from collisions with foreign Powers, and that a compact union of all its forces under one head was the only safe-guard against that evil. But it is impossible to believe that the expansion of the national mind necessitated the change. If we take the case of England, we find that making allowance for the retention of the ancient names and the old forms, the feudal system was substantially abolished in the seventeenth century, not by positive edict, but because the national mind had outgrown it. All classes of society began to intermingle, the pretensions of birth were effaced, the ranks of the aristocracy were thrown open, wealth was becoming power, equality before the law was established, public employments were open to all, the press became free, the debates in Parliament public; every one of them principles unknown to the Middle Ages. And it was because these new elements were gradually and skilfully incorporated with the ancient constitution of England, reviving without endangering it, and filling it with new life and vigour without destroying the ancient forms, that the transition from feudalism to the modern condition of society was effected so safely and almost imperceptibly. The French, with less wisdom, failed to modernize society without a convulsion wholly unparalleled in the history of the world, and from the effects of which they are suffering at this very moment. Admitted that the Revolution in this country was in some sense caused by a popular movement from below, what evidence is there that it had any real progressive political aspirations, or that such conditions as have succeeded it are anything but attempts to imitate the examples of foreign countries? We fear, very little. We cannot doubt that it is the intention of their rulers to lead the Japanese forward in the path of progress, many as are obstructions which they themselves oppose to it. Their own ideas may, and doubtless have outgrown the ideas on which the old feudal polity was based, but that the mind of the people has done the same of its own proper motion, is more than we can bring ourselves to believe. Under these circumstances we are disposed to place a higher value upon KIDO's Memorial than at first sight would appear to attach to it, and to hope that the immense circulation it is said to have attained will dispose the people to reflect upon the advantages it is proposed to place within their reach, and the use to which they should turn them. It is but too certain that they have been so accustomed to see the initiative taken by their rulers or superiors that they have

little real life in themselves, and anything which tends to produce this and to foster independent manifestations of it, cannot but be beneficial.

We shall not presume to imagine that any form of Constitution which could at this time be sketched out by a foreign hand would be of much service as a guide to Japanese statesmen. We know so little of the real constitution of the Japanese mind, that any such attempt would be like cutting a garment for a man of unknown size and proportions, in ignorance of the nature of the climate against which it was the intended protection, and of his customs, habits and occupations. Such a constitution as is applicable to the country will, if there be any constructive political talent in it, take a form suited to its growth and antecedent conditions. The spread of education, and the larger demands made on the energies of the people by an increasing trade, which, if the rulers of the country are wise, they will use every enlightened means to stimulate, will foster new thought, create new aspirations and enforce new demands, and a written Constitution may well await any demonstrated necessity for it. That of which Kido speaks in his Memorial has a nebulous outline of popular institutions in its first clause, and in another the supreme command of the forces of the Empire is placed in the hands of the Sovereign. But beyond this there is an utter absence in it of all constructive thought, and he well says that any literal adherence to it, or enchainment by it, would paralyse Ministers in their attempts to deal with new emergencies. We recently attempted to show the dangers which attend the present political condition of affairs, and are sure that any grave discontent arising in the country, or severe calamity overtaking it, would create feelings in regard to the Throne incompatible with the retention of an entire loyalty to it, and the conviction of its sacredness and indispensability. It is, of course, necessary that any future Constitution should repose upon the grand basis of the sentiments and will of the people. Yet we would gladly see even some provisional machinery erected as a defence to warn off dangers which could not but be formidable were they to arise, and which should expend themselves on outworks and not on the citadel itself.

#### ITINERARY OF A JOURNEY FROM YEDO TO KUSATSU, WITH NOTES UPON THE WATERS OF KUSATSU.

By Captain DESCHAMPS, of the French Military Mission. Read before the Asiatic Society of Japan, October 22nd, 1873.

THE warm springs of Kusatsu have enjoyed a considerable reputation in Japan for many centuries, though it must be left to the subsequent investigations of modern science to determine the value of this reputation. Be it as it may, the coolness and salubrity of the climate of Kusatsu during the hot months of the year are incontestable, and its comparative proximity to Yedo and Yokohama will consequently attract travellers or European invalids who, even though they may neglect the use of waters still little known to our medical practitioners, will find there during several months the temperature and bracing air of the mountainous parts of Central Europe.

I have thought that a short account of the route I took, the resources of the country, and the various information which I have been able to gather from the natives, would not be without value to travellers in Japan.

Regarding the medicinal effects of the waters, I must leave specialists to settle this delicate question. I had but one mercurial thermometer, graduated to 55° (Reau.), a good instrument, it is true, and registered at the Paris Observatory. But it would be indispensable to have a maximum and minimum thermometer for determining the

nocturnal temperature and those of the springs at Kusatsu which vary several times during the day. Nor was I able to determine the elevation of the place, and I only use the figures 15 to 1600 metres for the altitude of Kusatsu as pure supposition, without attaching further value to them.

#### ITINERARY.

Before entering upon any detail it may be well to state that the traveller can go in a carriage and in one day from Yedo to Takasaki (about 25 *ri*). There is even a native service between the two points. The road is often in bad order, and the carriages are inferior. In journeying by short stages the following is the itinerary which I should recommend, and which I myself followed.

	From Yedo to Itabashi 2 <i>ri</i> 8 <i>chô</i> .	
1st day, From Yedo to Okegawa 10 <i>ri</i> .	Itabashi to Warabi.. 2 8 " " Urawa... 1 14 " " Omeija... 1 10 " " Agio..... 2 " " " Okegawa " 30	
1st August Temperature.	Itabashi ..... 7.00 a.m. 28° 5 Omiya.....12.00 " 32° Okegawa..... 7.00 31°	
Morning, cloudy. Day fine with a gentle breeze S.W. Water drinkable 16°.		
2nd day, From Okegawa to Honjo 11 <i>ri</i> .	Okegawa to Konosu 1 30 " " Kumagai 4 6 " " Fukaya 2 27 " " Honjo 2 25	
Grand halt at Kumagai. Sleep at Honjo.		
2nd August Temperature.	Konosu..... 6.00 a.m. 27° Kumagai.....11.00 a.m. 31° Honjo..... 7.00 p.m. 30°	
Morning cloudy. Day fine. Gentle breeze S.W. Water 16°: at Kumagai 15°, 5° and 14°.		
3rd day, From Honjo to Minokura (or Sannokura) 12 <i>ri</i> 20 <i>chô</i>	From Honjo to Shimmachi 2 0 " " Kuragano.. 1 18 " " Takasaki... 1 19 " " Kameyama 4 — " " Sannokura 3 18	
Grand halt at Takasaki (very bad water). Sleep at Sannokura.		
3rd August Temperature.	Shimmachi... 5.30 a.m. 25° 5 Takasaki..... 8.00 a.m. 25° 5 Sannokura.... 7.00 p.m. 28°	
Fine. Gentle breeze. Storm in the evening at Sannokura. Water at Sannokura 15°.		
4th day, From Sannokura to Sugao 7½ <i>ri</i> .	Mountain path, practicable for horse, or foot or in <i>kago</i> . From Sannokura to Oto.. 4 18 " " Sugao 3 "	
4th August Temperature.	Sugao.....12.00 28° " ..... 7.00 p.m. 27° 3	
Fine. Water (at Sagao) 14°.		
5th day, From Sugao to Kusatsu 6 to 7 <i>ri</i> ?	Sugao to Naganohara.... 4 " " " Kusatsu..... 3 "	
5th August Temperature.	Sugao..... 4.30 a.m. 23° 5 Kusatsu..... 12.0 23°	
Grand halt at Naganohara.		

#### GENERAL OBSERVATIONS.

The total distance is from 46 to 47 *ri*. The general direction is N. W. in relation to Yedo which renders the route disagreeable in summer, as no advantage is gained from the S. W. breeze, and the traveller has the setting sun before his eyes during the whole of the afternoon journey. From Yedo to Shimmachi, the road is in general monotonous, traversing a vast plain slightly undulating, rich in cereals, and where the mulberry is much cultivated for the purpose of silk-worm rearing. This plain, especially as you approach Honjo, vividly recalls those of Lombardy, by the character of its cultivation, the number of rapid streams which line the route, and the peaks of the chains of distant mountains which rise upon the horizon towards the W. and N. W.

## II.

WATER-COURSES, ROADS, REMARKABLE POINTS,  
PRODUCTS.

The road traversed bears the general name of Nakasendo. It is the main line of communication from the centre of Nipon between Yedo, Kiôto and Osaka. At Ishibashi there is a small stream flowing into the large river known in Yedo as Ogawa or Sumidaga. Before arriving at Uwarabi this large river must be crossed. It is there called the Erdagawa. Its source is to the East of Mount Komposan, which seems to be the starting point of several considerable streams, and from this point as far as Kumagae it bears the name of Aragawa. It flows from its source to Kumagae in a north-easterly direction, and from that point to Yedo in a south-easterly direction, passing through Yedo and falling into Yedo Bay.

From Mount Komposan flow, on the north, the river Chikumagawa which runs northward and empties itself in the Sea of Japan, and on the south, the Fujikawa which runs southward into the Bay of Suruga, passing to the west Fusiyama. This massive mountain becomes therefore remarkable as the dividing point between the waters of the Pacific Ocean and the Japan Sea. To the south-east of these mountains, the Temmokusan is also the point of departure of several streams which form a secondary basin represented by the river Tamagawa, which flows from the W. to E. and runs into the Bay of Yedo at Kawasaki. Another secondary basin is formed by several streams which, rising on the N. E. slopes of Fusiyama, flow into the Bay of Sagami after a course mostly south-east.

From Uwarabi to Kumagae the road takes the left bank of Todagawa. Kumagae is an important producing Centre. A large trade in cotton and silk-worms' eggs is carried on there and the number of houses is estimated at from 1000 to 1200.

All this country (Musashi no Kumi) is rich and well cultivated. The mulberry grows in abundance, as do maize, various cereals, rice and cotton. Tea is but little produced and is of an inferior quality.

Leaving Kumagae, an arm of the Todagawa is passed, much diminished in summer, but which judged by the breadth and rugged appearance of its bed, must be a formidable torrent at certain times of the year. Between the arm of the Todagawa and Honjo, towards a point named Okabé, the traveller leaves the basin of Todagawa to pass into that of Tonengawa. Crossing a small affluent on the right bank of the latter river, he arrives at Honjo, an important centre of 1000 houses owing its importance less to its commerce than its position, the point at which the Nakasendo branches off to Nikko. Formerly and at no distant date numerous travellers and pilgrims journeyed from Osaka and Kioto to Nikko. After leaving Honjo the road to Nikko takes the special name of Reikeishi Kaido, trending due north in order to pass the Tonegawa at a distant of about 1 *ri*, and from thence taking the direction of Nikko.

The Tonegawa appears to take its rise to the north of Mikuniyama and Otokoyama, among a series of mountains the eastern slopes of which would form the basin of the Chikumagawa (seas of Japan) and those of the western side would give rise to the various affluents of the Tonegawa (Pacific).

The Tonegawa flows to the N. E. as far as Shimmachi, and afterwards to the E., discharging itself by one branch into the gulf of Yedo, and by another directly into the Pacific to the north of the gulf of Yedo, forming in these two directions a confused delta, after having received numerous affluents from the mountainous countries comprised between Atamayama, Kusatsu and Nikko. The Tonegawa is crossed by ferry a short distance before Shimmachi; the broad, rough and stony bed of the river shews that this passage can hardly be made without difficulty at certain seasons of the year.

Shimmachi is a place of no great importance; a road leads from thence to Tomiyoka (a distance of 6 *ri*) where the government has established a model silk-spinning factory, under the direction of a Frenchman, M. Brunat. After Shimmachi the traveller passes an important tributary of the left bank of the Tonegawa, and arrives at Takasaki, the point where he leaves the Nakasendo to reach Kusatsu. Towards the west may be perceived the

summit of Atamayama, crowned with smoke and whitish vapours, and from the west to the north and northeast a confused series of high mountains. The boundary of the plains forming the basin of the Tonegawa is now reached.

Takasaki is an important centre, furnishing everything necessary to the inhabitants of the surrounding mountains, and attracting to itself all their trade. The town which is very long, extends itself on both sides of the Nakasendo and contains about 2000 houses.

A large trade is carried on there in cotton goods manufactured in the country, particularly in stockings (*tabi*). A certain quantity of silkworms is also bred there and it seemed to me that the greater number of these were the Yamamai (*bombyx* of the oak?) The drinking water, which since leaving Yedo has been invariably found good, and of a mean temperature of 15°, is very bad at Takasaki.

The Nakasendo, which we leave at Takasaki, and with which we shall have nothing more to do in this itinerary, seems then practicable for carriages from Yedo up to this point, but although the route may appear good at a dry season of the year, the nature of the ground clearly indicates that this same road would become heavy and often impracticable after continuous rains. The formation on this line, which opens up great commercial centres, of a macadamized road practicable for carriages in all weathers, would greatly advance the prosperity of the country.

The passage of the secondary branch of the Todagawa (Arakawa) after Kumagae, and of the Tonegawa in advance of Shimmachi may offer insurmountable difficulties at present, and can only be secured by the construction of bridges with stone piers strong enough to stand against a sudden rise of the stream.

From Takasaki a footpath winds across rice fields, and after passing Kameyama, follows the left bank of a small tributary of the Tonegawa as far as Sannokura. The ascent then begins to make itself felt: we are entering into the mountainous region.

At one place it is only possible for a *jinriksha* to pass, and this with difficulty, while the ground is broken and uneven. It is preferable to travel on foot, on horseback, or in a *kango*. The temperature is sensibly lowered, the nights are already cooler. On issuing from the village an old ruined temple may be observed surrounded by venerable and very remarkable trees, the situation presenting some beauty. From Sannokura to Oto the road rises continually, and walking becomes more difficult. The views are picturesque and varied. Fresh springs of an excellent quality gush from the mountain. The vegetation, always rich, changes its aspect, and varieties of the oak, walnut and chestnut are observed.

On arriving at Oto the traveller enters another basin, the waters of which springing from the north of Asamayama, flow from west to east, and empty themselves into a main current which passes to the west of the mount Mitsunesan, and flowing from north to south, discharges itself upon the left bank into the Tonegawa. There is nothing remarkable about Oto but its very picturesque position, and traces which would seem to indicate that the spot had been formerly a consecrated one. Frequent cultivations of hemp (*asa*) are met with from Oto to Sukao and further on. The Japanese enclose it in long boxes of rectangular form, where it is packed in bundles placed vertically.

Beyond Kameyama the transport of goods is performed on the backs of men, horses, or oxen. The country is stocked with mares, entire horses are in general excluded. In the same manner more cows than bulls are to be seen. The pack horses are quiet, coarse and capable of supporting great fatigue. The shape of the back which resembles that of the mule enables them to carry enormous loads. The weight of the burden fixed by the Government is 32 *kan* which, at 4 kilos per *kan* is 128 kilos, but generally they are loaded with three bags of rice each weighing 16 *kan* or a total of 48 *kan* equal to 192 kilos, an almost incredible weight. The animals travel 9 *ri* per day over very bad roads. The hind feet are unshod; on the fore feet the *naraji* is fastened. They boldly face the steepest gradients and descend the worst paths, being guided solely by the voice, the simple bridle in the month being used only to stop them. The mares are singularly good-tempered, are well treated by the peasants, nor have I ever been witness of

a single act of brutality. This breed of animals, though ill-looking, is precious, and great caution should be exercised in introducing foreign blood into it, especially that of American stallions, of which the Government, to its cost, has had some experience during the past two years. The cows are fine, in good condition and very gentle. A little milk can always be got from them. These observations are applicable to all the mountains of this basin.

Sugao is a miserable village of no resources and it is difficult to find there even a bad inn. A peasant showed me for a few tempos two somewhat curious animals taken in the mountain. One is of the rodent family, a kind of grey squirrel which must be somewhat analogous to what is commonly termed the flying squirrel. An elastic membrane on either side unites the anterior and posterior extremities. It is armed with very strong claws, and is about twice as large as the common squirrel of Europe. Its eyes are very convex and its dread of strong light makes me believe that it is a Nyctalope. It feeds on nuts and fruits and is called by the natives Momoga. The other was a bird of the family of the waders which lives on fish caught in the streams. There is no appearance of a tail, which gives it a singular look. The specimen I saw was, indeed, very young. It is said to grow to the height of four feet.

From Sugao to Naganohara the road becomes more difficult and picturesque. Before reaching Naganohara you pass, by means of a bridge of very original construction, a deep and rapid stream running between high banks, which is fed from various sources, notably from the northern slopes of Asamayama, and from Yokozasayama (the latter to the N. E. of Asamayama).

This stream flows from Kazawanoyre, the source of the warm springs, runs from west to east, passes to Kawaranoyu, also the source of warm springs, and receives at Naganohara the torrent produced by the warm waters of Kusatsu. On the left bank of the torrent the waters of Yomonoya and Sawatari are to be found, at the foot of Yakushigatake, and on the right bank Ikao, sources sufficiently celebrated, near to mount Kampirayama.

After a somewhat disagreeable walk of 3 *ri* Kusatsu is reached. On leaving Naganohara the road overlooks the torrent which it commands from a considerable elevation. This portion of the road is not without difficulty for horses which are either restive or not sure-footed. In the almost vertical sides of the rocks which flank the path a natural recess has been availed of to rear a temple of singular picturesqueness. The remainder of the road presents slopes of much difficulty of ascent and descent, but in no sense dangerous.

### III.

#### KUSATSU.

Kusatsu is at this moment (1873) a village consisting of a hundred or so of houses built round the numerous springs of warm water which gush from the soil, it may be said, at every step. These springs are nearly all concentrated in a kind of tank so commanded by the hills, so that from the village itself none of the interesting scenery of the neighbourhood can be seen. But as you ascend the surrounding slopes to the south east the remarkable summit of Asamayama comes into view, the foot of which is only 6 *ri* distant, and towards the east and north east, a chain of wood-clad mountains, which, without possessing the imposing character of the Alps or Pyrenees, are not wanting in a certain grandeur and present considerable attractions to pedestrians. The vegetation, more sparse and less rich than that of the lower plains, is still respectable, though the various kinds of trees do not attain any great size. Tall thin pines similar those of central Europe are to be met with and the birch begins to appear. Ferns are abundant. Considerable spaces may be seen covered with a tall thick grass which has given its name to the district (*kusa* grass, *tsu*). Another etymology is *kusa*, a root signifying 'striking,' and *tsu* a river bank where people collect to wash clothes, &c.

#### RESOURCES.

The village of Kusatsu was formerly large and numbered, it is said, 1000 houses. A fire almost entirely destroyed it in 1872 and it is now rising with difficulty from these ruins. The crowd of Japanese who assemble here to gain relief from their frightful maladies is very large

and it is difficult to find lodging room. It is also to be remarked that you only see at Kusatsu Japanese of the lowest class, the victims for the greater part of horrible diseases. The tea-house which combines the greatest conveniences is one named Nakagawa, in the centre of the village. There is in this house a warm spring of the lowest known local temperature and therefore best suited to Europeans who are not accustomed to being boiled alive. But this house which is the *rendezvous* of the Japanese of the lowest class has the great inconvenience of being very noisy. Few nights can be passed without the accompaniment of *samisen*, *geishas* and the cries of drunken men. The complaints of Europeans on this head are unheeded, and the proprietor prefers to his European customers his ordinary Japanese visitors who cross him in nothing. The tendency to raise prices upon foreigners is soon seen in little details after a few days, and this will increase from year to year.

Lodging may be also had among the bonzes who are pleased to gain a little money. But the temple is on a hill remote from the springs and is not therefore convenient for those who visit the place for the sake of the waters. There are also two or three small tea-houses where accommodation may be had near the stream known as the Kampirano yu on the NW of the village. As regards the means of subsistence the country furnishes little. The neighbouring fishermen bring to market good mountain trout (*Yama me*) and a small fish called *at*—the latter but rarely. Quails (*udzura*) are also to be found. The land grows potatoes and beans, eggs are plentiful, but chickens or ducks are scarce. Game is found in the winter, hares, pheasants, wildboar, deer and even bears, but in summer it is almost impossible to obtain it.

#### CLIMATE.

The climate of Kusatsu appears to me to answer perfectly to the wants of Europeans during the hot months. A series of more accurate observations subsequently made will give greater certainty to the assertions which I would at present make with some reserve, as I had neither the means nor the time to observe very carefully. According to approximate comparisons, having, as I have said, no more than this value, I suppose that the elevation of Kusatsu is between 1300 and 1500 metres. The mornings and evenings are cool and the nights often cold. I regret that I had no registering thermometer to give an exact idea of the temperature at night, but I imagine that it falls to 18° even in August. I did not observe any maximum over 26° when it must have been torrid in the plains.

The day breezes appear to be generally as on the coast, S.W. and S.S.W. and are of almost daily occurrence. The solar rays from a clear sky have certainly the same intensity as on lower levels, but are tempered by the elevation and the pure air of these regions. They are thus bearable and even in the middle of the day walking produces no distress. There were frequent storms during the month of August, but the rains were moderate and generally short. The appetite soon becomes stimulated, remains good, exercise is felt to be agreeable, and sleep profound and restorative. Mosquitoes are unknown and flies rare in airy houses.

The springs of drinking water are numerous and very various in the midst of a confusion of waters of all kinds. Some are passable, others very good and pains must be taken to find them. Near the Nakaza inn there is an excellent one with water at 11°·5 and even 10°, slightly aperient in its effects, but it may be taken in any quantity with impunity. Earthquakes seem rare and the inhabitants show their indifference to them by building houses of two stories, which recall the chalets of Switzerland. Roofs are at a very open angle and weighted with large stones. This peculiar feature is observable from Sannokura. The inhabitants leave Kusatsu at the end of October and return towards the middle of May. During the winter months a sufficient number of men to guard the houses is left. The snow is said not to exceed three feet in thickness, and the inhabitants only move to a distance of 2 or 3 *ri*, where they find a tolerable climate.

#### GENERAL ASPECT OF THE WARM SPRINGS.

In the centre of the village there is a large rectangular tank whose largest dimensions are from W. to E. Several

streams and neighbouring springs are concentrated here. This tank, constructed in ages long past, is a sufficiently remarkable work, for it was necessary to divert the springs and build in water of a high temperature—perhaps from 55° to 70°. It was covered in and divided into many compartments, but the fire of 1872 entirely destroyed this edifice.

The waters towards the East enter by a fall of from 4 to 5 metres and this is used for *douches* in the lower part of the tank.

These waters fall into a stream of warm water which, issuing from the side of the mountain on the N. E. of the village, flow through the village on the N. W. and S. E., and having received all the waters from the various springs, joins, after a tortuous course among the surrounding hills, the stream of Naganohara, which, as I said above, carries off all the water to the Tonegawa and from there into the Pacific.

The central tank and all the springs and streams produce constant whitish vapours of a sulphurous odour. The vegetation is in no way tainted by these exhalations, and grass and trees grow to the edge of these streams which stand at a temperature of 55° and upwards. The bed of the streams, the stones of the tank, and the conduits employed to conduct the waters are by turns green, yellow or white, according to the composition of the waters, of which I will speak further on.

A study of the phenomena produced by these waters would be extremely interesting and well merits the attention of the specialists who sooner or later will devote themselves to it. The temperatures change several times a day. The maximum appears to be towards the middle of the day, the minimum at sunrise. I give this observation, as all others, under full reserve. Curious phenomena occur. The principal stream (which I shall name N. O.) received some years ago a small affluent on its right bank. This affluent was also warm and ran intermittently every other year, but for the last seven years it has disappeared. The dry bed of the torrent is to-day called "Samogawara" (The dry river of souls.) A hot spring which rose vertically to the height of one metre from below the soil also disappeared in 1870. The Japanese regard it as the place of departed infant souls. On the numerous rocks of this dry bed they superstitiously heap up small stones which produce a very singular effect. Among these rocks is one which the Japanese regard and show with much curiosity. It is a rocking stone which can be set in motion with the hand and then regains its equilibrium. It is called Irugishi. The site is wild and suggestive of superstitions legend. At a short distance there is a natural circle in a lonely and silent spot. A number of stones ranged around suggest a wrestling arena. The place is named Omi-no Sumoba, "the arena of the devil's wrestlers." Beyond this, a path, leads through the grass to a place, distant about 3 kiloms. which the Japanese glorify with the name of the Koriba or Koridami glacier. There are rocks exposed to the full north, and in the crevices of which lurk small remnants of snow and ice, but I could not find as much as would weigh a pound. I have enlarged upon these details because they are the only curiosities of the country. Beyond this small excursion, at a greater or less distance, some picturesque site, some torrent or remarkable wood may be found, but the environs are but little known. The celebrated volcano, Asamayama, the crater of which, always emitting smoke, is to be seen at a distance of 6 *ri*, and the lurid glare from which may be seen on dark nights, is a further attraction to the tourist. The ascent has been made several times; it offers some few difficulties but attracts the natives but little.

In 1870 (or 1871?) the volcano ejected stones to a distance of 2 *ri*. Several houses were destroyed and lives lost. In the neighbouring mountains there are certain peaks which may easily be ascended, among others Shirameyama, but they afford only a small interest, the weather being rarely clear enough to afford a fine distant view.

It remains for me to speak of the warm waters, their composition and effects as well as the manner in which they are taken.

The subject, indeed, is wholly within the domain of medical science, and I can only be expected to give uncertain information upon it. There exists in the country

a very old work entitled "*Uin to annaiki*" which may be translated "the bather's guide," containing the names of the principal springs and the diseases which should respectively be treated at them, as well as a series of precepts for the use of the waters, precepts which contain among many false ideas some sound and wise counsels the justice of which I have learned by experience. Even in default of science the practice of several centuries has enabled these people, themselves ignorant, to discover some useful rules. I have deemed it useful to give as accurate a translation as I could of this little work, only adding to it a few observations and the registered temperatures.

Before entering upon this technical portion of my task which may not interest all my readers, I shall conclude this paper by observing that according to the national traditions these waters of Kusatsu and their virtues were discovered from 1000 to 1100 years back. The peasants were the first to make experiments with them. But subsequently, Yoritomo, hunting one day in the neighbourhood of Asamayama, and having fallen sick, heard from one of the peasants of their singular virtues. He used them with benefit to himself and thus became the author of a reputation for them which many centuries have not diminished among the people of Japan.

#### IV.

#### COMPOSITION AND EFFECT OF THE WATERS OF KUSATSU.

The waters would seem *à priori* and by the accounts of the natives, to contain the following elements:

Sulphur .....	<i>Yuwo.</i>
Alum .....	<i>Miyoban.</i>
Sulphate of Copper .....	<i>Campan.</i>
Arsenic .....	<i>Tosiki.</i>
Borax .....	<i>Hosha.</i>

either pure or mixed according to the springs. A scientific analysis made on some samples taken to Yedo will hereafter give more exact results.

The temperature of these springs or streams ranges from 38° to 55° 60° 70° and above. In each spring the temperature varies several times daily.

(To be continued.)

#### A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

##### 3RD YEAR OF BUNKIU, (1863).

7th month, 2nd day.—On this and the two following days, the Satsuma men fought with the English at Kagoshima. The English were beaten and fled. On the 12th the Mikado expressed his admiration in an edict.

7th month, 5th day.—The Daimio of Maruoka was appointed Roju.

7th month, 12th day.—Troops were sent from Choshu to Kioto.

7th month, 12th day.—The Mikado ordered Shimadzu Saburo to be summoned to Kioto, as he had resolved himself to punish him.

7th month, 14th day.—Nakane Ichinojō was despatched by sea to Choshu, and Makino Sakon and Murakami Motome to Kiushu. On their way they were fired upon at Iwaya in Awaji. It was said that Nagazaka Sadaji of the Tokushima Han afterwards committed Harakiri on account of this affair.

7th month, 15th day.—A notice was posted up at the shrines of Takoyakushi and Benzaiten threatening with death the unprincipled officials of the Shgun's Government and the dealers in foreign wares.

7th month, 17th day.—The war Inspector and Imperial Envoy Higashizono Chujo and Shijo Jiju went down to Kii and Harima.

7th month, 17th day.—The Daimio of Okayama came again to Kioto.

7th month, 19th day.—At Kioto the runaway clansmen murdered a Karo of Lord Tokudaiji named Shiga Umanodaijo.

7th month, 20th day.—A notice was posted up threatening Prince Nakagawa with an unwelcome visit for his opposition to the expulsion of the barbarians.

7th month, 22nd day.—Nakane Ichinojo and his companions arrived at Choshu, where on the 13th day of the 8th month Nakana and others were killed and also a man named Sudzuki Hachigoro.

7th month, 23rd day.—At Kioto the runaway clansmen killed a merchant named Yawataya and set up his head on the notice-board at Sanjo with an intimation that four others were to be put to death. On the 25th the merchants and people of the lower class put up a petition at the same place. On the 29th a notice was put up on the gates in Muromachi and Anenokoji machi stating that this petition was granted.

7th month, 24th day.—The Mikado instructed Matsudaira Shikibu no Tayu to demand the expulsion of the barbarians.

7th month, 24th day.—Kono Shiro and Yagiu Hioyei of the Kokura Han committed suicide in Choshu. The reason was said to have been that they had accompanied Nakane Ichinojo.

7th month, 26th day.—At Kioto, the runaway clansmen killed Ofuji Yusō and set up his head on the public notice-board.

7th month, 27th day.—At Kioto the runaway clansmen burnt the Temple of Kōdaiji, because the old Daimio of Fukui was lodged there.

7th month, last day.—The Mikado reviewed the disciplined troops of the Wakamatsu Han outside the Hi no Mon (Sun-gate).

8th month, 7th day.—The Prussians surveyed the Shinagawa sea.

8th month, 8th day.—The Mikado privately appointed Prince Nakagawa Commander of the army for the pacification of the West.

8th month, 12th day.—The Shogun himself ordered all the officials to come to the Castle to discuss the question of the closing of the ports.

8th month 12th day.—At Kioto the runaway clansmen burnt a warehouse belonging to Yamatoya Shōbei a dealer in foreign goods.

8th month 13th day.—The Mikado announced that he was about to proceed to Yamato, where having worshipped at the shrine of Jimmu Tenno, he would hold at mount Kasuga, a council to deliberate on the war for the chastisement (of Choshu); the Mikado himself to be the leader.

8th month 14th day.—The Daimios of Tottori, Okayama, Yonezawa, and the heir to the Daimio of Tokushima went to the Palace and begged that the above intention might be abandoned. Their prayer was not granted.

8th month 15th day.—At Yedo the ronins murdered the unattached samurai Sudzuki Shigetane.

8th month 15th day.—At Yedo the samurai of the Hagi (Choshu) Han murdered a spy of the Shogun's Government.

8th month 15th day.—The Daimio of Kokura was relieved of the defence of the Shinagawa fort No. 5, which was placed in charge of the Daimio of Matsuye.

8th month 16th day.—The old Daimio of Nagoya was ordered to superintend the defence of Osaka.

8th month 17th day.—A notice was posted up at the Kurabashi gate in Kioto stating that although the Daimio of Tottori merited the punishment of Heaven, in consideration of his father's zeal, his head would be given in charge to his father.

8th month 17th day.—At Kioto twenty two samurai of the Tottori Han murdered Kurobe Gonnoske and three others of the same Han.

8th month 17th day.—The runaway clansmen attacked the town of Gojo in Yamato; they killed Sudzuki Gen-nai and four others and set up their heads at the Sakurajji gate.

8th month 18th day.—Notice was given that the Mikado's intention to visit Yamato had been abandoned.

8th month 18th day.—The Mikado ordered the Choshu men to leave Kioto. Lords Sanjō and Nishi Sanjō, Higashi Kuze Shōjō, Mibu Shiri no Goutayu, Shijō Jijū, Nishiki no Koji Uma no kami, and Sawa Mondo no Shō left along with them.

8th month 18th day.—Lord Hitotsubashi paid a visit of inspection to the seas near Yedo in company with the Roju.

8th month 19th day.—The Mikado ordered the Shogun to expel the barbarians at once.

8th month 20th day.—The Mikado gave orders to expel the barbarians at once without waiting for orders from the Shōgun's Government.

8th month 20th day.—Makino Sakon and Murakami Motome returned to Yedo.

8th month 21st day.—A notice was posted up at the Gionyami Gate threatening with the punishment of Heaven the Daimio of Wakamatsu.

8th month 21st day.—The Hatamotos were ordered to wear hats with a circular hole surrounded by a gilt border.

8th month 25th day.—The Daimio of Wakayama came to Kioto.

8th month 25th day.—Tomioka Okurakio, Shigenoi Chujō, Hashimoto Shōshō, Made no koji, Karasumaru Tiju, and Higashizono Chujō were ordered to refrain from appearing in public and Lord Sanjo and the other six Court nobles were deprived of their rank and titles.

8th month, 25th day.—The Mikado gave orders to chastise the rebels severely. These orders were directed against the band of runaway clansmen.

8th month, 25th day.—The Daimios of Wakayama, Tsu, Hikone, and Koriyama were ordered to pursue and cut to pieces the band of runaway clansmen.

8th month, 26th day.—The Daimios living in Kioto and their chief retainers were summoned to the palace and informed by the Mikado himself that although there was some doubt of the genuineness of some late Imperial edicts those issued since the 18th were the authentic expression of the Imperial mind.

8th month, 26th day.—The runaway clansmen attacked the town of Takatori. They were driven back and assembled at Amanokawa.

8th month, 26th day.—The defence of Kioto was entrusted to the Daimios of Oshi, Shiakawa, and Shinjo. The Daimio of Oshi was relieved of the defence of Fort No. 3, at Shinagawa, its defence being transferred to the Daimio of Takazaki.

8th month, 27th day.—The Daimio of Tokushima was relieved of the defence of Shinagawa, which was entrusted to the Daimio of Mito.

8th month, 27th day.—The Daimio of Himeji proceeded to Kioto by sea.

9th month, 1st day.—A notice was posted up at the Nihonbashi threatening with punishment from Heaven the dealers in foreign wares. On the 2nd a similar notice was put up in Murumachi, and on the 3rd in Bakurochō.

9th month, 1st day.—The Mikado ordered Prince Dazai no Sotsu Akihito to proceed to Kwanto as Special Envoy to arrange for the expulsion of the barbarians.

9th month, 2nd day.—A Frenchman was killed at Hodogaya by some person unknown.

9th month, 2nd day.—It was notified that the office for the examination of barbarian writings "would henceforth be called the Kaiseijo, or institution for the spread of enlightenment."

9th month, 3rd day.—The Choshu people sent back Nakane Ichinojo's companions together with their ship.

9th month, 5th day.—The Daimio of Kameyama ceased to hold the office of Roju.

9th month, 6th day.—The command to furnish a special force as an Imperial guard was cancelled.

9th month, 8th day.—The Daimio of Kawagoye was called upon to the part in the Government.

9th month, 8th day.—The samurai were forbidden to frequent the houses of the Court nobles.

9th month, 9th day.—The troops of the Daimio of Hikone advanced from Yoshino. They had several skirmishes with the runaway clansmen, many of whom were afterwards arrested by the troops of the Daimios of Wakayama, Tsu and Koriyama.

9th month 13th day.—The Daimio of Nagoya was ordered to retire from public life.

9th month, 13th day.—The Daimio of Nagaoka was appointed Roju.

9th month, 14th day.—An interview took place with the Americans and Dutch at the office for Naval Affairs. The paper respecting the closing of the ports was returned and orders were given to close Yokohama.

9th month, 14th day.—The Mikado sent orders saying that in consequence of the troubles in Kioto on the 18th

of the 8th month the expulsion of the barbarians must no longer be delayed. These orders were brought to Yedo on the 29th by the Daimio of Himeji.

9th month, 15th day.—The troops of the Daimio of Hikone and of the other Daimios attacked the runaway clansmen and dispersed them.

9th month, 16th day.—A notice was posted up at the Nihonbashi stating that if the Gankiro at Yokohama was not removed the house called Iwatsukiya (owned by the same person) at Shinagawa would be burnt.

9th month, 19th day.—The English and French were summoned to an interview, but they refused to come.

9th month, 28th day.—Shigeno Konojo and his colleagues of the Kagoshima Han had an interview with the English at Yokohama. Afterwards several other interviews took place, and on the 28th of the 10th month they paid an indemnity for the Namamugi affair of 70,000 rios. The English had no reply to make respecting the Kagoshima business, nor did the Satsuma people discuss it among themselves.

10th month 3rd day.—Shimadzu Saburo came a second time to Kioto.

10th month 7th day.—The Mikado announced the abandonment of the plan of sending a special envoy respecting the expulsion of the barbarians.

10th month 7th day. The old Daimios of Fukui and Kochi were sent for to Kioto. Both proceeded there at once.

10th month 10th day.—The old Daimio of Nagoya returned home from Kioto.

10th month 11th day.—The Shogun was summoned to Kioto.

10th month 11th day.—An Imperial edict was issued stating that as negotiations for closing the ports were going on, the orders of the Shogun's Government should be awaited and nothing done lightly.

10th month 11th day.—The Daimio of Tottori returned to his province from Kioto.

10th month 11th day. The Daimio of Kawagoye was charged with the supreme control of the affairs of Government.

10th month 11th day.—Lord Hitotsubashi was sent to Kioto in consequence of the Shogun's being summoned there. He arrived there on the 18th day of the 11th month.

10th month 13th day.—The Daimio of Okayama returned to his province from Kioto.

10th month 13th day.—The runaway clansmen attacked Ikuno in Tajima. The next day they were routed by the local militia. Thirteen were killed and the remainder either taken prisoners or obliged to retreat.

10th month 19th day.—The Daimio of Fukuoka came to Kioto.

10th month 21st day.—The Daimio of Kawagoye was relieved of the defence of Shinagawa Fort No. 1, which was transferred to the charge of the Daimio of Hiroshima.

10th month 23rd day.—At Yedo the runaway clansmen murdered a Karo of Lord Hitotsubashi named Nakane Chojiro.

10th month 24th day.—A notice was posted up in several places in Yedo, threatening the punishment of Heaven if the prices of rice, silk, cotton, paper, oil, salt, charcoal and firewood were not lowered.

10th month 25th day.—At Yedo the ronins murdered several dealers in foreign wares.

10th month 25th day.—Notices were posted up at Shinagawa, Kawasaki etc. announcing that in order to make Lord Hitotsubashi abandon his visit to Kioto the official hotels along his route would be burnt.

11th month 4th day.—A notice was posted at Shimmei in Shiba, threatening the punishment of Heaven on those merchants who did not give up dealing in foreign wares within five days.

11th month 5th day.—The Shogun announced his intention of again proceeding to Kioto.

11th month 6th day.—Kuchiki Kiroku was sent on a mission to the Daimio of Kanasawa, and Matsudaira Tomozajuro to the Daimio of Sendai.

11th month 7th day.—The Daimio of Kawagoye was ordered to construct a castle at Mayebashi and to demolish the one at Kawagoye.

11th month, 10th day.—Orders were given to return to the ancient practice of wearing *Noshime* and *Kataginu* (kinds of dress) and on the 1st day of the 8th month *Katabira*.

11th month, 15th day.—The Chief Castle building was destroyed by fire. The Shogun removed to the Shimidzu yashiki, and on the 26th to that of Lord Tayasu.

11th month, 19th day.—The Americans presented a letter from their President saying, as was reported, that the closing of the ports would by international law justify going to war.

11th month, 20th day.—Notice was given that steps were being taken for the punishment of the ronins and forbidding all persons to go about within the moats without a lantern.

11th month, 22nd day.—The authority over the Shinchogumi was entrusted to the Daimio of Shonai.

11th month, 25th day.—Wakizaka Matazō and Wakizaka Hachiro, Karos of Lord Hitotsubashi, arrested Fuku-hara Otonoske and others of the Choshu Han in the Yashiki of the Daimio of Kariya. Otonoske was killed fighting.

11th month, 27th day.—A Prussian ship came to Shinagawa. On the 13th of the 12th month the ratifications of the nearly with that country were exchanged, and the ship thereupon went away.

11th month, 28th day.—Ikeda Chikugono kami, Kawadzu Idzu no kami and Kawada Sagami no kami were ordered to proceed to England, France and the other Powers to negotiate the closing of the ports.

About this time there were numerous notices posted up in Yedo threatening the punishment of Heaven, the burning of houses etc. One of the most impudent of these notice was to this effect "O ye ronins! the price of fuel has not yet come down." It is impossible to note them all.

12th month, 1st day.—Ihara Kadzui of the Hagi Han came to Fushimi and presented a petition respecting his lord.

12th month, 4th day.—The Daimio of Mito was relieved of the defence of Shinagawa which was entrusted to the Daimio of Nakatsu.

12th month, 8th day.—The unattached Samurai Momonoi Gihachi formed the Daimio of Kawagoye that more than 1,000 ronins were planning an attack on Yokohama.

12th month, 12th day.—Iwamatsu Manjiro went to Yedo without leave, and disclosed to the Government the intention of the ronins to attack Yokohama.

12th month, 13th day.—The Daimio of Mamoka left Yedo for Kioto.

12th month, 16th day.—In consequence of the project of the ronins, it was notified that the roads to the different provinces would be closed against all persons unprovided with passports.

12th month, 23rd day.—Notice was given of the commencement of building operations in the western enclosure of the Castle.

12th month, 24th day.—The Choshu men fired on and sunk a Satsuma ship at Shimonoseki.

12th month, 27th day.—The Shogun set out from Yedo and went to Kioto by sea.

12th month, 28th day.—A Swiss ship arrived at Shinagawa and requested that a Treaty might be concluded with them.

(Concluded.)

#### ATHLETIC ASSOCIATION OF YOKOHAMA.

##### ANNUAL AUTUMNAL SPORTS.

Friday, the 15th November, 1873.

The new running path on the Rifle Range was opened yesterday by the Amateur Athletic Association of Yokohama, an Athletic Club which was called into existence this year in consequence of the very successful meeting held on the race course in November, 1872.

The proposal to form a running path adapted to the purposes contemplated by the Association was first canvassed some three or four years since, and subscriptions were invited in its aid. At that time it was deemed advisable to employ the site of the cricket ground for this purpose, but owing to the releveling of the swamp the

project was for a time shelved and finally lapsed altogether. A meeting was held in the present year with a view to a full discussion of the subject and various proposals were presented for the consideration of the subscribers. It was finally decided—we believe, by only a small majority, as there were many dissidents from the plan—to form a path (building culverts over the creek wherever requisite) on the Rifle Range.

So soon as the numerous forms prescribed by Japanese custom had been complied with and permission to erect buildings and fences had been obtained, the necessary work was proceeded with under the superintendence of Mr. W. Brent at present acting as Secretary of the Association.

An oblong space has been fenced in with rounded angles a quarter of a mile in circuit, the path (formed by rubble and cinder) being firm and compact to the tread. A stand for spectators is erected at the winning post, and on the other side of the course a small bungalow fitted with bath rooms furnishes the members with a room for hanging their dress, &c. The cost of the whole work is, we understand, very slight. The Society seems to owe much to its Secretary who has identified himself very largely with the success of their new arena. The arrangements appear to be as complete as the means of a youthful Club would justify, and the funds have been administered so far as we can learn with judgment and economy.

The loveliness of the weather yesterday and the attractions of a varied programme of games tempted to the spot a large number of foreigners, and the native element was represented by a crowd of Japanese who entered, apparently with much zest, into the amusements of the scene.

Although this was the first meeting of the Association on its new ground, the entries for the various races and games may be considered fairly good. The dryness of the season admitted of the running path being maintained in the most favourable condition for the sports. It will, no doubt, in time be better as the made ground settles and consolidates, and some improvement in those parts where the creek is crossed by bridges may naturally be looked for. The path as it is, however, is in excellent condition and considering its recent formation leaves little to be desired.

The Sports commenced at 1.30 p.m. and the events followed each other in the order in which we name them.

1.—THROWING THE CRICKET BALL.—Open. One Prize.

- 1 E. Abbott, 87 yards 2 feet.
- 2 H. F. Abell.

This was won by Mr. Abbott. Owing to the wind which was blowing at the time the throw was not quite as good as would have been made under more favourable circumstances.

2.—100 YARDS FLAT RACE.—For Members only. Presented by N. P. Kingdon, Esq. (First of each Heat).

FIRST HEAT.

- 1 W. Brent.
- 2 J. J. Dare.

Time 11 seconds. Mr. Brent secured the advantage at the start and won apparently without any difficulty.

SECOND HEAT.

- 1 A. T. Watson.
- 2 J. H. Sandwith, R.M.

Time 11½ seconds. The start was in favour of Lieut. Sandwith who, however, was unable to keep his position. He was soon overtaken by Mr. Watson who came in a winner.

THIRD HEAT.

- 1 E. Abbott.
- 2 H. B. Henley.

Time 11½ seconds. This was won by Mr. Abbott by several lengths.

3.—ONE MILE FLAT RACE.—1st Prize, \$10; 2nd Prize, \$7; 3rd Prize, \$3.

Five men of the Royal Marine Battalion viz: Privates Coombes, Dunn, Tarring, Barrett and Smale competed at this race. Private Coombes retired at the close of the first,

and Private Tarring after the second round although he had made excellent running. At the third round the lead was taken by Barrett, and retained until his reaching the corner of the course in the fourth round, when Dunn, who had been waiting behind the others, came vigorously forward, and pushing on, won by at least seventy yards. Barrett was placed second, and Coombes came in by a few yards after him.

4.—THROWING THE HAMMER (16 lbs.) Open. (any style). One Prize.

- 1 J. P. Reid—64 feet.

There were only three competitors for this prize. The winner's first throw was the best.

5.—150 YARDS FLAT RACE. For Members only. (First of each heat to run in the final.) One Prize.

FIRST HEAT.

- 1 J. J. Dare.
- 2 A. H. Dare.

Time 18 seconds. Four competitors. Mr. J. J. Dare lost some little time at the start which, however, his superior speed soon enabled him to recover. He won by about two yards.

SECOND HEAT.

- 1 E. Abbott.
- 2 J. H. Sandwith.

Time 17½ seconds. This was won easily by Mr. Abbott.

6.—RUNNING HIGH JUMP. Open. One Prize.

- 1 A. H. Dare, 4 ft. 6 in.

There were four entries for this, but Mr. Dare alone came forward.

7.—ONE MILE WALKING RACE. For Members only. Two Prizes.

- 1 A. T. Watson, time 8 in. 33 sec.
- 2 J. H. Longford, time 9 in. 17 sec.

Four started. In the first round Mr. Taylor, who had already walked one mile against time, led off at a rapid pace followed by Mr. Longford and Mr. Watson. After this round Mr. Taylor, having forced the pace for the latter, retired from the race. Mr. Watson here took the leading position which he maintained to the close, reaching the winning post some 140 yards before Mr. Longford. Mr. Abell retired before completing the second round.

Dr. Siddall and Mr. Pryor kindly acted as Judges.

8.—LADIES PURSE. 880 Yards. For Members only. Presented by the Ladies of Yokohama and Yedo.

- 1 W. Brent.
- 2 A. Ouston.

Time 2min. 18sec. Only eight of the fourteen members who had entered for this race presented themselves at the post. Mr. Brent took the lead at the start which he subsequently, during the first round, yielded to Mr. Ouston. Mr. Abbott, however, here took up the running and kept the lead for some time until Mr. Ouston recovered it, Mr. Brent taking second place. At about fifty yards from the winning post Mr. Brent made a vigorous dash for the foremost position which he secured, arriving at the post a winner by a few yards. This was an excellent race.

Miss Bingham presented the prize to the winner, accompanying it by a few complimentary observations.

9.—RACE FOR JAPANESE. Once Round. 1st Prize, \$5; 2nd Prize, \$4; 3rd Prize, \$2. Five competitors to start or no race. Entries on the ground.

Time 66 seconds. A good deal of amusement was occasioned by this race. The winner fell when about fifty yards from the post, upsetting the others who were following him. He was, however, soon on his legs again and notwithstanding his mishap came in a winner. Ten started.

10.—STEEPLE CHASE. About 1 Mile and a quarter. Open (with 2 Ditches and 1 Hurdle.) One Prize.

- 1 J. J. Dare.
- 2 W. Brent.
- 3 A. H. Dare.

Messrs. J. J. Dare and Smyth led off at the start. A jump some twelve feet wide was taken by the former, none of the other competitors succeeding in clearing it. The course here was marked off on the low spurs on either side of the Rifle Range and comprised some rather rough and trying country with steep banks. When the runners reappeared Mr. Dare was seen to be leading and won apparently with ease, Mr. Brent being second. In crossing the brook on their return most of the runners jumped short, and only Messrs. Hall and A. H. Dare succeeded in clearing it.

A pleasant day's sport thus came to a successful end. We cannot close without adding a tribute, (in which we imagine all will join), to the excellent arrangements made by the Secretary of the Society, Mr. W. Brent. He has been energetic and untiring in his efforts to place this little Society on a good footing and to render its aims popular, and few of those who were witnesses to his success in the various games of yesterday will grudge him the triumph which his skill and fleetness ensured to him.

Saturday, the 16th November, 1873.

A large concourse of visitors was again assembled to witness the sports which had been arranged for this day's proceedings. These were conducted without accident or hitch and the excitement of the various contests afforded the most ample gratification to those who were present. The presence of a large native contingent of spectators was a very noticeable feature of the scene. The first event of the day was the—

#### 11.—FINAL HEAT 100 YARDS FLAT RACE.

- 1 Abbott.
- 2 Brent.

Time 11 seconds. This was closely contested and was won by Mr. Abbott by about one yard and a half.

#### 12.—RUNNING LONG JUMP. Open. One Prize.

- 1 A. H. Dare.
- 2 S. Elder, 16 ft. 4½ inches.

#### 13.—FINAL HEAT 150 YARDS FLAT RACE.

- 1 Abbott.
- 2 J. J. Dare.

15.—FLAT RACE 440 YARDS HANDICAP. For Members only. One Prize presented.

- 1 E. Abbott, 15 yards.
- 2 Lieut. Sandwith, R.M. 35 yards.

Time 56½ seconds. Eleven started for this race Mr. Sandwith taking the lead. He retained this until coming down the home stretch when he was overtaken by Mr. Abbott who won the race by two yards. This was an excellent handicap.

#### 16.—HOP, STEP AND JUMP. Open. One Prize.

- 1 A. T. Watson.
- 2 J. J. Dare.

The length taken was 38 feet 7 inches.

17.—ONE MILE FLAT RACE. For Members only. Presented by Arthur Brent, Esq.

- 1 A. H. Dare.
- 2 A. Ouston.

Time 5 min. 35 secs. This race was well contested. Mr. J. J. Dare took the lead at the start and maintained it for the two first rounds of the course when he yielded to Mr. A. H. Dare. At the final round Mr. Ouston made a vigorous effort to gain first place but was beaten.

18.—STRANGERS' RACE. (For Non-residents only. Entries on the ground.) One Prize.

- 1 A. Sterling (Oxford.)
- 2 C. T. Layton (London.)

Time 17½secs. Three started one of whom, however, retired at the post. Mr. Sterling secured the leading position by dash and came in a winner.

19.—HOPPING RACE, 75 YARDS. For Members only. One Prize.

- 1 Ouston.
- 2 Henley.

This was contested by two members only.

20.—CHAMPION STAKES—300 YARDS FLAT. Presented by W. H. Talbot, Esq. For all Winners; optional for Non-winners. Entrance \$3; compulsory for Winners.

- 1 W. Brent.
- 2 E. Abbott.

Time 38 secs. This was a good race, all getting off pretty well together. Mr. Abbott had a good position but was delayed by running against the corner of the fence. Mr. Brent came in a winner by several yards.

21.—CONSOLATION. Once Round. One Prize. For all Non-winners at this Meeting.

- 1 C. P. Hall.
- 2 Sandwith.

Time 66 seconds. This Race was well contested by the first and second runners and was won, though not without considerable effort by Mr. Hall.

The proceedings were brought to a close by the last event, and the company assembled in front of the Grand Stand to witness the presentation of the prizes by Mrs. Grant of Shanghai. The winners were complimented upon their success and after receiving the fruits of their triumphs retired amid the cheering of their friends.

## Law & Police.

### OFFICIAL ENQUIRY INTO THE LOSS OF THE P. M. S. S. *ARIEL*.

The following is the decision of the Court of Enquiry in reference to the loss of this vessel.

The Court of Enquiry called at the request of the Agent of the P. M. S. S. Co. at this port, to enquire into the loss of the steamer *Ariel*, having heard and carefully examined the testimony adduced do find as follows:

That the steamer *Ariel* left this port on the afternoon of the 26th October, 1873, at 5 o'clock p.m., bound for Hakodate.

That the usual northerly course was steered after leaving this bay, and until Cape Ineboye was passed, but at what distance from the shore the Court is unable to find.

That after Cape Ineboye was passed, the shore line was closely followed until off Toyama point.

That the same or nearly the same course had not only been steered by the *Ariel*, but has been pursued by other vessels.

That during the voyage moderate winds, sea, and currents were experienced.

That at the hour of 9.10 o'clock on the evening of the 27th October off Toyama point the steamer *Ariel* struck on an unknown reef, and became a total wreck.

That at the time the steamer struck she was from 3½ to 4 miles from the land.

That within 20 minutes after the vessel struck her entire stern was under water, and that the rapidity with which she filled and the danger of her immediately sliding off the reef prevented the saving of property of any considerable value.

That the reef upon which she struck, is not laid down in the Marine charts.

That from the time the steamer struck, and until all the passengers and crew were safely landed, excellent discipline was maintained.

And the Court is therefore of opinion. That in view of the fact, the same, or nearly the same course had been taken before; not only by the *Ariel*, but by the other vessels, and in view of the fact that the reef which the *Ariel* struck is not laid down in the Marine Charts, the Court is of opinion that no blame can attach to Captain Newell. But while it exonerates him, it cannot but think that upon a coast so little known, and so poorly surveyed as the coast of Japan, unless so compelled by stress of weather, Captains of vessels cannot be too careful in keeping a good distance from land even where the charts do not indicate danger.

The Court is also of opinion the conduct of the Captain, which resulted in saving of every person on board the steamer at the time of the disaster is very praiseworthy, and also that the discipline maintained on board his vessel, and his zeal in trying to save property, is commendable.

U. S. Consulate, Yokohama, Japan,  
November 10th, 1873.

GEO. N. MITCHELL,  
*Vice-Consul and President of the Court.*  
CHARLES J. McDUGAL,  
*Commander, U.S.N., senior U.S. Naval officer present.*  
J. D. CARROLL, M.M.

Assessor J. M. BATCHELDER declined to sign the finding and opinion of the Court.

GEO. N. MITCHELL,  
*Vice-Consul, and President of the Court.*

#### IN CHAMBERS.

Before N. J. HANSEN, Esq., *Acting Assistant Judge.*  
Tuesday, 11th November, 1873.

KENT v. BLACK.

This was a motion to compel defendant to shew cause why he should not pay certain monies, to wit, \$620 that he was indebted to Mr. Vernede into court for the benefit of the plaintiff, who has obtained a judgment against Mr. Vernede. Defendant denied indebtedness to Mr. Vernede. The Judge ruled that cause had been shewn, and dismissed the case.

#### H. B. M.'s PROVINCIAL COURT.

Before N. J. HANSEN, Esq., *Acting Assistant Judge.*  
November 11th, 1873.

Christopher Lanahan, marine, was charge with assault.

A. A. Sisco, sworn, deposed that on the 1st November he entered the British Queen on business. That whilst there, he was assaulted by several English soldiers. It was just as he was coming out. The first was the defendant, who gave him a blow in the face with his fist, saying something at the time which prosecutor could not understand. Witness said, when he was struck by the prisoner, in English, "You must have made a mistake," for he could not understand why he had been struck. Shortly after he had received a blow from a loaded cane, on the forehead. He had two black eyes as a result. The defendant was the first who commenced the assault. Another was going to strike him with a belt, when feeling somewhat stunned, and seeing that a row was about to commence, he went out by another door to the house of a baker, for protection. He had never had any dispute with the soldiers in question. On Saturday morning he had gone to see the Colonel, to make a complaint. On entering the Camp met the defendant, who said "If you will not say anything to the Colonel about my affair, I will tell you who it was who struck you with the loaded cane." He persisted, however, in seeing the Colonel. Was certain that the defendant was the man who had first struck him. He demanded no compensation, but wished that these men should be punished according to law, as an example to others.

Prisoner, in reply to Court said that he had no questions to ask the prosecutor. He had never seen him before the Sunday morning mentioned. He would like to call witnesses, however, but some of them were not present.

William Lawrence, sworn, said he could tell at what time prisoner arrived in the barrack room on Nov. 1st. It was past nine at night.

Prosecutor to Court: The affair occurred at between half past eight and nine at night.

William Ratcliffe, sworn, said the prisoner's bed was next to his. He could say for certain that he entered the barrack a little before nine o'clock. He was perfectly sober at the time.

Prisoner in reply to Court, as to whether he had any other witnesses to call, said that he had left the Lone Star of Chili at nine o'clock.

The case was adjourned to Saturday, the 22nd inst., for the production of further testimony, as well as for the production of the characters of the men concerned.—*Herald.*

#### Extracts.

##### HAIR DRESSING BY LAW.

The *Hiogo News* publishes a communication from a correspondent which throws a good deal of light upon the subject of hair dressing. The communication appears to have been suggested by the following Government proclamation:

"The *Mage* of every male who has not, on or before the 25th of present month (January, 1873,) adopted the European manner of wearing the hair, will be cut off by the policemen at the time and place of apprehending such offenders, for which purpose said policemen will be provided with scissors, &c."

A Government notice, of which the above is a translation, was posted on the Municipal Notice boards at the open ports at the beginning of the year, and since then has gradually been posted in every town and village of the Japanese Empire, the places farthest removed from Foreign intercourse being the last to receive it. Of course, if this Notification be carried out, its effect will be to do away with many most curious old customs in connection with hair-dressing in this country.

My only object in writing to you now is to give a short account of the manners and customs of the Japanese in connection with this matter of hair-dressing, as it seems quite probable that it may soon become one of the things of the past, concerning which information may be difficult to obtain. I will begin with the child directly after birth and follow it up to manhood.

As soon after birth, then, as it is considered practicable, the head of every male child is shaved. The time when it is considered quite safe to do this varies very much in different parts of Japan,—in some places it is not done for thirty days, and in other places it is done as early as three days old. The ceremony was called the *Ubu-yore*, or first shave, and was generally made the occasion of a family gathering, the hair which resulted from the operation being disposed of in some fanciful manner;—in Yedo it was thrown under a certain bridge; in the province of Kishiu it was the custom to bury it under or near the threshold of the entrance door; in other places it was the custom to throw it into a river. From this period till the age of three, the child's head was kept clean shaved, with the exception of one small tuft above the nape of the neck. The next change, which commenced from the child's third year, was that he was permitted to wear on his head three tufts, or rather two tufts and a "whorl," the latter being situated on the crown of the head and the two former one on each temple, just above the spot where phrenologists place the organ of ideality. (We commend this fact to the notice of phrenologists generally;—the special protection of these "bumps" during the early years of life may, it has been suggested, have something to do with the acknowledged talent of the Japanese in the matter of decorative art.) The child's head was kept in this state till between the ages of seven and nine, from which time the whole of the hair of the head was allowed to grow, except on one small oval patch between the crown of the head and the forehead, which was kept clean shaved, and when a sufficient length of hair had been developed it was combed backwards and fastened up into the national queue or "*mage*," which Japanese word simply signifies a bend or curve. The practice of tying up the hair at the back or top of the head appears to have arisen originally as a mere matter of convenience, as in Japanese pictures which represent events of very ancient times, the hair of many of the persons portrayed does not appear to have had the benefit of as much combing as could have been done with a three-legged stool.

No further changes than those described above took place in the method of wearing the hair, till the youth had reached his fifteenth or seventeenth year, when the ceremony of *Gempuku* was performed, which is something equivalent to coming of age amongst Western nations. The sixteenth year was considered an unlucky one, so that one of the two above-mentioned was chosen, according to the size and appearance of the candidate for manhood, and a lucky day having been fixed upon, a great feast was prepared for all friends and relatives. The hero of the occasion, if entitled by his rank to wear clothes of ceremony, donned them for the first time that day, and then went through the principal ceremony of the occasion, namely, having the top of his head shaved from the forehead to the crown, leaving the hair on the back and sides of the head intact. Of course this important operation was performed by no ordinary person, the

operator being always if possible a person of some celebrity and at the same time not a relation of the family, and he was from that time forth entitled to some token of remembrance from the youth on every occasion of rejoicing, he of course giving his patronage and protection in return. The hair shaved off was placed on a piece of white paper supported by crimson and gold threads stretched across a peculiarly shaped wooden stand, elaborately lacquered. The ultimate fate of this hair differed both according to locality and the idiosyncrasy of the person shaved; some buried it, some threw it into a river and some preserved it. The youth was also at this ceremony re-named, unless it happened, as was sometimes the case, to be his godfather who officiated on the occasion. The hair was then gathered up at the back of the head, well oiled and waxed, and then tied up into a queue with a peculiar string made from paper, and this queue, generally worn of a length of from eight to ten inches, was further oiled, waxed and compressed till it resembled a stick of black sealing wax, next bent forward over the shaven crown and then tied down into that position with the ends of the same string which had been originally used to hold it together. The youth was now considered by himself and others to be a man, and was entitled to a man's

x privileges.

It has been already mentioned that the origin of this system of fastening the hair into a queue was simply convenience, but it was afterwards continued to meet the necessities of the peculiar head covering worn by all Japanese officers in ancient times. This was of such a curious shape that it refused to remain on the head without something to steady it in its place, and the queue (which was then worn upright) did service for a peg, and thus secured the head-dress from falling off. This head-dress was abolished about three hundred and fifty years ago, at which time the practice of shaving the crown of the head was commenced. The Japanese account of the origin of the introduction of this practice into general use is as follows:—The Shogun then in office, Ashikaga Yoshiye, whose supineness did not please his followers, was murdered by his chief officer, Matsunaga Hisashide, who elevated to the rank of Shogun. Ashikaga Yoshiyaka, Yoshiakiro, who was only a tool in the hands of this Matsunaga Hisashide. The latter, who had the prosperity of the army really at heart, and added greatly to its efficiency by abolishing many useless customs and introducing some useful ones, wished, after committing the above deed, to have some plain proof of his popularity and power, and accordingly issued an edict that all those who were devoted to him and his cause should shave the crowns of their heads. An enormous proportion of the population did so, and though Matsunaga Hisashide soon afterwards lost his own life, the custom has ever since prevailed. The ceremony of *Gempuku* (coming of age) is however, of a much more ancient date than the head-shaving, which was one of the principal ceremonies of late times, and was previously observed in a different manner.

Of course, in such a country as Japan, where for so long a time so much has been thought of condition, state and ceremony, different methods of wearing the hair were sure to be introduced, and we accordingly find that it soon became to some extent a distinguishing mark of rank, which was indicated principally by the thickness of the queue and the angle at which it pointed forward over the head. Daimios wore it sometimes several inches in circumference, reaching forward over the forehead and bound round with purple silk braid. Priests kept and still keep their heads clean shaved and doctors do not shave their heads at all.

One of the results of this extremely artificial method of wearing the hair has been that nearly every Japanese has had to employ a hairdresser, no man being able to dress his hair properly for himself. The process, as might well be imagined, was a tedious one, occupying generally nearly an hour; and fond gossip of as the Japanese are, they could not put up with this invasion of their time every day,—which brings us to the origin of the national pillow, which had to be made of a shape which would not derange the hair. It consists of one or more pieces of lacquered wood, constituting a block about eight inches high, six inches long and two inches wide, and in a groove on the top of this, cut for its reception, is placed a small cotton bag shaped like a "German sausage," and filled with rice husks or some kindred substance, so as to form a kind of pad. Many Japanese, it may here be mentioned, get so used to this singularly uncomfortable (to look at) way of sleeping, that they consider it no particular hardship to have to use a wooden block without any pad at all. Another result of the system is that hairdressers in Japan visit their customers,

as a rule, not the customers the hairdressers; and it is no uncommon sight of a morning to see a Japanese merchant and his clerks sitting in the house and conversing with customers, while the peripatetic hairdresser attends to their heads consecutively.

Taking all the circumstances into consideration, the Japanese would unquestionably be gainers by the carrying out of the edict which is the opening sentence of this article. They would gain time, save money, sleep more comfortably and be able to wash their heads, supposing that, amongst the foreign fashions they have an occasional "rage" for adopting, they should ever adopt that one.

#### THE SCHUMANN FESTIVAL.

It is two years since Bonn, as the birthplace of Beethoven, was chosen as the scene of the musical festival which (after being put off for a year by the war) commemorated the centenary of one of the very greatest musicians whom the world has yet seen. A concert-hall was built specially for the occasion; artists were collected from all parts of Germany, and worked together for the common end with a zeal, fidelity, and diligence worthy of such an occasion. The result was eminently successful. It is no exaggeration to say that the performance of Beethoven's masterpieces attained unprecedented excellence, and it excited an interest and enthusiasm which must have been an ample reward to both leaders and followers for all the toil which bore fruit in three days of perfect music. The impression made by the Beethoven Festival was one never to be forgotten; and it was natural that Bonn should not be content to wait for a second centenary of Beethoven to see other such three days. The Beethoven Halle remained standing; the organization once called into existence for the Beethoven celebration was ready at hand; nor was a new object far to seek. The most creative and original musician of the generation following Beethoven's passed his last days in Bonn, and lies buried there. The reputation of his works, which for some time suffered from the intolerance of those who demand that all music shall conform itself to their understanding of its principles, and from the impatience of those who do not care for music that requires any understanding at all, has since his death been steadily increasing within and without his own land. The time has not been long, but it has sufficed for the full establishment of Schumann's fame; and when the word went forth for a Schumann Festival after the pattern of the recent Beethoven Festival, the success of the undertaking was assured beforehand. And, in fact, the enthusiasm excited on this occasion has been even greater than in the case of the Beethoven Festival. Whether this was due to the way having been so effectually prepared by the brilliant success of two years ago, or to the personal interest of Schumann's life and works being so recent, may be left to conjecture; but the manner in which the artists performed their part was certainly, if possible, more perfect, and the sympathy of the audience more spontaneous and complete, than in 1871.

The effect of the Festival on the general aspect of Bonn is certainly very singular. A peaceful, and in ordinary times somewhat commonplace, Rhineland town is converted for half a week into a scene of enthusiasm to which it would be difficult to find a just parallel in any other country. There is an odd mixture of solemn exaltation and simple, almost childish, gaiety, which however seems quite natural for the time and place. An Etonian reader may perhaps form an approximate notion of this disposition by imagining the Fourth of June at Eton to be still a serious and veritable commemoration of King George III.'s birthday, and all its fireworks and other diversions to be gone through with a deep sense of duty and an almost religious reverence for King George and his works.

The celebration was made up of two evening concerts on the 17th and 18th, and a morning concert of chamber music on the 20th of August. Many of the artists were naturally the same who had been prominent two years ago. Chief of these must be reckoned Herr Joachim, who is the acknowledged master of all who handle his instrument, and who has also, by the result of a difference with the Prussian ex-Minister of Education, Von Mühler, supplied a practical illustration of the principle that it is better to play the fiddle well than to govern a nation badly. On this occasion his principal function was that of conductor, though his violin was at last heard in its usual, or something more than its usual, power, in the final concert of chamber music. Straus was there again too, in his place of first violin—a worthy lieutenant of such a commander; and Madame Joachim came as before with her gift of song, clear and strong, as if to match the tones which her husband draws out of strings and wood. The most notable change among the leading personages was a natural, and indeed indispensable,

one. At a feast of Schumann's music, given in honour of Schumann's memory, only one person could be thought of as the interpreter of his compositions for the pianoforte. The office fell, as a matter of right, one may say, to Madame Schumann, the power and beauty of whose playing are well known to all English lovers of music. On this occasion she surpassed herself, and it is almost needless to add that the active part she took in the Festival contributed in no small degree to its interest and success. Two of the leading singers were also new to the Beethoven Hall; Madame Wilt, of Vienna, and Herr Stockhausen, of Stuttgart. Herr Stockhausen's finished and dramatic rendering of German song has during some recent seasons become familiar to the English public. Madame Wilt, we believe, is very little, if at all, known in England. Together with a voice of rare quality, she has the artistic cultivation without which no natural gifts can be rightly developed. These whom we have named, with other worthy companions of whom we are forced to omit special mention, and an admirably trained orchestra and chorus, making up the whole tale to something over five hundred, were the fellow-workers who met together to do honour to Schumann in these three days of August. The results obtained were such as to give a full reward for their endeavours. It was impossible to come away from the Festival without a heightened appreciation of the composer, and a sense of gratitude to the artists who had so perfectly realized his best conceptions.

The general effect of the music was indeed not to be compared to that of Beethoven's at the former celebration. Schumann has not the volume or universality of Beethoven. In the handling of music as an instrument to express particular moods and emotions he is hardly to be surpassed; he can be intense, exquisite, discursive; but he is not comprehensive. He seldom rises above the sphere of the emotions which supply the motive of his work to the serene position of the mastery from which every part of the artist's world is seen in its due harmony with the whole. This final satisfaction and reconciliation, which is the rule with Beethoven, and is most conspicuous in his greatest works, is the exception with Schumann. He never fails to stir, but he rarely satisfies. The symphony which opened the first concert at Bonn is fiery and restless throughout. It is a conflict brought to an end at last only by main force. If there is a note of triumph at the end, it is the triumph of some overbearing and destroying destiny which strikes us with astonishment, but does not command any worship; some force which we acknowledge as irresistible, but cannot reverence as good, or even understand as necessary; and we are left bewildered witnesses of a great event the importance of which cannot be realized at the time. We miss the perfection and sufficiency of the greatest masters. Beethoven is lord of all the elements, and develops a world out of chaos; Schumann is for the most part a Demiurgus fighting with chaos and uncertain of the issue. Perhaps this is the reason why Schumann's most satisfactory works are those in which he elaborated motives already determined by a poetical text. Such are the scenes from *Faust*, of which the final part was given at the second concert of the Festival. Goethe's poetry is pre-eminent in the quality of completeness which is wanting in Schumann; and on the other hand, the exalted vision with which the second part of *Faust* comes to an end strains the powers of articulate language to the very utmost, and may be fairly considered to stand in need of musical interpretation—the only kind of interpretation perhaps which is likely to throw much light upon it. The raptures of the *Doctor Marianus* and of the glorified Gretchen, the joy of the angels who bear up *Faust's* immortal part to heaven, the mystery of the final chorus—

Alles Vergänglichhe  
Ist nur ein Gleichnis,  
Das Unzulängliche,  
Hier wird's Ereignis;  
Das Unbeschreibliche,  
Hier ist es gethan,  
Das Ewig-Weibliche  
Zieht uns hinan—

can hardly be explained by any commentary; but they are sympathetically illustrated by Schumann's music. Madame Joachim, Madame Wilt, and Herr Stockhausen were all admirable in this performance. One exquisitely sung passage of Herr Stockhausen's solo was followed by a storm of applause and a shower, which might almost be called a storm, of bouquets. It appears to be the custom on these occasions to aim the complimentary missile, not vaguely in the direction of the artist's feet, as we do in England, but straight at his head, which is much more impressive to look at, but must be now and then embarrassing. The peculiarity which we have noticed in Schumann's genius is, however, not without splendid exceptions.

A notable one is the concerto which Madame Schumann played on the second day. In this the composer lifts himself to the region of pure and consummate mastery. The impression given by this piece may indeed have been partly due to the performer, for whom it was doubly a triumph. We doubt whether Madame Schumann has ever yet put forth her powers so completely and successfully as at this Festival.

The artistic constellation has now dispersed, and Bonn resumes its usual aspect of a polyglot halting-place of Rhine tourists, where travellers diffidently address waiters in English-German, and waiters confidently reply in German-English. But the memory of the festival days remains, and we do not suppose the Beethoven Hall will be long allowed to stand idly vacant.

#### LAW REFORM AND JUDICIAL REFORM.

(*The Nation*—New York.)

The judicial power of England consists of eighteen Common Law judges, four Equity judges, one judge for Probate and Divorce, another for Admiralty, and about half a dozen whose duties are exclusively those of an Appellate Court. There is also a Court of Bankruptcy, several criminal tribunals, and a few local or city courts of limited jurisdiction. The county courts we need hardly name, for their jurisdiction is little more than that of an American Justice of the Peace, though they are presided over by barristers who receive salaries about equal to that of a United States Circuit Judge, and do a really large and useful business in adjusting differences, and making peace, and enforcing, but easing, the payment of small debts among the poor. Laying aside these inferior tribunals, we find, then, that the entire judicial power of England rests upon the shoulders of about thirty men. That this mere handful of men—not enough to half-fill an American railway-car—should do all of the judicial work of a great and wealthy manufacturing and commercial people down to disputes involving less than £50; and that their official utterances and conclusions should be looked up to and styled "authority" by the keen, critical, logical profession of two nations, are facts which seem overwhelming evidences of the wisdom and perfection of a system that can extract such comprehensive results from such exceedingly narrow means. To this statement it should be added, that these judges' conclusions are not the mere result of individual wisdom and discretion, like those of an Oriental kadi, but that, on the contrary, their decisions are guided and restricted by preexisting rules, requiring that kind of continuous study and reflection which is termed legal learning, and requiring, also, that the decisions shall be so uniform that it will make little or no difference to which of these thirty men a given state of facts shall be presented, and that the utterances of all shall blend into one harmonious system, which will not only serve to settle disputes among men, but will reach the higher and more important end of settling them before they grow into the wasteful evil of litigation.

Whatever may be the complainings of the English newspapers, and the chronic discontent of the English people, and the ridicule thrown on the law by humorists and novelists, it must be evident to any rational mind that administering justice according to a comprehensive and uniform standard is an immense task and that the facts which we have enumerated constitute an immense result. An active manufacturing and commercial community, whose daily transactions run through every form of human device and extend to every quarter of the habitable and uninhabitable globe, and which is, moreover, embarrassed by greater accumulations of wealth than any other community in the world, is necessarily one that abounds in all of the causes of litigation. These new and intimate and complex transactions of men, involving mutual dependence and trust, and aiming always at the acquisition of wealth, must lead to novel conditions and unforeseen occurrences, and may be said to breed disputes. When, therefore, such a people can reduce the judges of their superior courts to less than one for every million of inhabitants, and find that all of their litigious business is disposed of without accumulation, they demonstrate beyond all reasonable doubt that, notwithstanding a few exceptional cases, the mass of their disputes is disposed of in advance of legal proceedings, and the remainder with such certainty and rapidity that men cannot afford to resort to the law as a mere speculation in which something may turn up to their advantage, and delinquent debtors cannot invoke its aid as a roundabout form of injunction, which by the ultimate payment of costs will grant them several years of dishonest delay. Such a result is certainly a very great achievement of human intelligence, and may be said to be the direct fruit of an intelligent perseverance which has been content to learn by experience, and to

improve and perfect without resorting to the revolutionary remedy of hasty destruction.

In the caustic novel called 'Piccadilly,' an American millionaire in London, being congratulated on the immense amount of money he has made in one of his New York transactions, says, deprecatingly, that the profits were not so large as is supposed; first, he had to the press, bribe which cost him one-fifth, and, next, he had to keep his own judge to grant and vacate injunctions, which was very expensive. If modern society, with its great accumulations of capital and its intense desire for wealth, were to accept as sound philosophy all that is against the law, and were to go back to an Oriental system of individual wisdom and discretion, it would very soon result in every large operator having his own kadi at the gate. The tribute of praise which is paid in the oldest book in the Bible, and in the comparatively modern Eastern tale, to him who does justice in the cause of the poor, shows that such a system was never, as a rule, one of even-handed justice. The modern court has for its glory the fact that it is placed above the plane of individual discretion, and is designed to administer justice irrespective of the amount involved in the controversy. Senator Carpenter, who is certainly a much better lawyer than legislator, while persistently shutting his eyes to the English civil service—of which he knows nothing—bears this testimony to the English administration of justice, as to which he knows, like every intelligent lawyer, a great deal:

"I am no admirer of the British Government; but with all her injustice, with her oppression of Ireland, and the blood that stains her garments in India and her other possessions, yet to her glory it must be said, that in no other nation on earth is the law, after it is made, so impartially applied to all classes of society as in England. Wealth and influence, even noble blood, give no immunity to crime in a British court. The rich and the poor, the nobleman and the peasant, a prince of the blood and a scavenger of London, stand on a perfect level at the bar of justice in a British court."

With a state of things existing, apparently, so satisfactory to all concerned, it must cause some surprise on this side of the Atlantic that the advancing spirit of modern reform has laid its hand on the English judiciary, and even appears to be overturning courts which on the one hand have done their work so well, and, on the other, go so far back into English history as to have become a part of it. In one sense, the change is remarkable. The "Queen's Bench," direct descendant of the  *Aula Regis*, the "Common Pleas," the "House of Lords," are names of legal antiquity which we are hardly prepared to see swallowed up in our familiar, modern, American titles of "Supreme Court" and "Court of Appeals." But aside from the external matter of names, there is no overturning. It is improvement without the revolutionary element of destruction, and is, in fact, merely the consummation of a change whose slow and steady growth goes back nearly thirty years. The establishment of the Court of Probate was an important step toward the unification of the English judicial system. Law reform, which is something entirely distinct from judicial reform, came along between 1850 and 1860, when, by the Common Law Procedure and the Law of Evidence Acts, Parliament, with the co-operation of the judiciary and the bar, entirely changed the legal practice of the country. These statutes were so carefully considered and slowly elaborated as to have remained almost wholly free from the usual blemishes called amendments. When the system of legal practice was simplified, and the change well established, the public mind travelled on to the subject of perfecting the judicial machinery. The order of events has been a succession of natural sequences in which the mediæval instruments have been refitted, part by part and piece by piece, for the multiplied necessities of modern society. The process has been thus: First, the law itself, civil and criminal, under the great law-reform movement of Brougham; next, the methods for administering the law, which come under the term of practice; finally, the tribunals which administer the law. This last is the change which for three years and more has largely filled the public mind of England—the mind of her legislators, judges, lawyers, merchants, editors, and has called out intelligent discussion from every class, going down to its minutest details. In our own experience in this State, we reversed the method and have failed to reach the result. The Convention of 1846, though legal in form, was revolutionary in method of proceeding. It is the characteristic of revolutionists to destroy first and build up afterward—to accomplish everything by a blow instead of a process—and to think that things will be excellent for no better reason than that they are the opposite of the things that went before. The Convention, sitting but a few months and doing work which was beyond practical revision or repeal, abolished the distinctive practice of law and equity, and by one blow struck down every existing court in the State from the local Common

Pleas up to the Chancery and Court of Errors. Immediately afterward, and coincident with the establishment of the new courts, came the destruction of the old system of practice and the new system of practice committed to a new system of courts, and it was difficult to tell to which system many perplexing mistakes belonged. Added to these difficulties was the fact that the changes provoked the hostility of bench and bar, and, instead of being their work conjointly with the legislature, were thrust upon them by the younger politicians of the State. Having thus sown the seed of uncertainty and delay, we are now reaping the crop—on the civil side of our courts in chronic procrastination; on the criminal, in series of trials like those of Foster and Stokes. Our State courts are much less the courts of poor men than those of England, for an involved system and a weak bench make the result too dependent upon the ingenuity and skill and audacity of counsel. A New York "scavenger" employing a single mediocre attorney would be very far from standing "on a perfect level" with Mr. Vanderbilt in a New York court. Our Federal courts are substantially in the position that the Judiciary Act placed them more than eighty years ago, and thus far their advancement seems to be a matter beyond the comprehension of Congress.

There is, however, one change about to be made in the English system which is of peculiar interest, and to some extent an apparent exception to what has been said, viz., the removal of judicial power from the House of Lords. The court of last resort has been the House of Lords in name, but not in fact. It would be nearer the truth to say that the judges of the highest appellate court have been *ex-officio* members of the higher legislative body. The system is not a bad one which brings a few leading judges to aid with their learning and experience the work of legislation, or which confides the responsibility of final judicial review to a few men who have been eminent as lawyers and pre-eminent as jurists. When a Lord Chancellor retires from office, he receives a pension of £5,000 per annum, but continues for life a judge of this court of last resort. But the judicial duties of the House of Lords have overgrown the court, and the court is one liable to grow weak when it most requires additional strength. For instance, the present court is composed, first, of the Lord Chancellor (Sir Roundell Palmer), one of the ablest and most accomplished of living lawyers; but he is obliged to act as Speaker of the House and as Chancellor. Next come the Chancellor of Ireland, who, we believe, is almost entirely occupied with his own duties. Then come four ex-Chancellors, Lords St. Leonards, Chelmsford, Cairns, and Hatherley. Finally, there are Lords Colonsay, formerly Justice-General of Scotland, Penzance (better known as Sir James Wilde), late Judge of the Court of Probate and Divorce, and Romilly, well known to American lawyers as Master of the Rolls. Some of these are men of great age, like Lord St. Leonards; others retired, like Lord Hatherley, because of broken health. Out of the list of nine, probably Lords Cairns and Penzance are the only men able to give to the court of last resort the daily attendance and hard work which it demands.

Behind these measures of judicial advancement are others for the establishment of Tribunals of Commerce, to assure merchants of simpler and cheaper means for judicial redress; and behind them again are others for trying patent rights, etc., etc. With such advancement going on by our side, how long, we would ask every intelligent American, can America afford to stand still in the path of Governmental progress and trust in the assurance of her political demagogues that she is "the most enlightened nation ever known?"

#### SCIENTIFIC.

**ACTION OF NITROUS OXIDE.**—Joylet and Blanche (*Archives de Physiologie*) have obtained the following results from their experiments on this subject. Chemically pure nitrous oxide will not support the respiration either of animals or plants, as they cannot decompose the gas. When breathed in a pure state by animals, it causes asphyxia and death, with all the symptoms usually occasioned either by strangulation or by the respiration of an inert gas, such as nitrogen or hydrogen. Nitrous oxide causes death in nearly the same time as these other asphyxiating agents. Nitrous oxide has no special anæsthetic action. The anæsthesia which it may produce when inhaled in a pure condition is only due to want of oxygen in the blood. Insensibility appears when the oxygen in arterial blood is reduced to less than two or three per cent. Arterial blood is then very dark, and contains 30 to 40 per cent. of nitrous oxide. Animals can live and show no alterations of sensibility while breathing mixtures of nitrous oxide and oxygen, in the same proportion as nitrogen and oxygen in air. The arterial blood then contains about 30 to 35 per cent. of nitrous oxide. Birds placed under a bell-jar filled with this mixture, behave exactly like those placed in a jar of the same size filled with air, and die after having exhausted the oxygen to a similar extent and formed a similar amount of carbonic acid. As nitrous oxide is an irrespirable gas and does not possess the anæsthetic properties which have been attributed to it, the authors conclude that its employment cannot but be dangerous, and ought, on this account, to be excluded from medical practice.

## ARRIVALS.

Nov. 8, *Avoca*, British steamer, Andrews, 1,006 from Hongkong. October 31st, Mails and General, to P. & O. Co.  
 Nov. 9, *Sobol*, Russian Gun-boat, Captain Sedensner, 450 tons, from Hukodate.  
 Nov. 11, *Golden State*, American ship, Berry, 944, from New York, June 28th, General, to Smith, Archer & Co.  
 Nov. 11, *China*, American steamer, Cobb, 4,000, from San Francisco, October 16th, Mails and General, to P. M. S. S.  
 Nov. 11, *Maud*, British steamer, Brittain, 843, from Kobe, 9th November, Rice and Saki, to Captain.  
 Nov. 12, *Mikado*, German barque, Lempferdt, 340, from Hamburg via Kobe, General, to Van Oordt & Co.  
 Nov. 12, *Golden Age*, American steamer, Coy, 1,870, from Shanghai and Ports, November 4th, General, to P. M. S. S. Co.  
 Nov. 13, *Windhover*, British ship, Findlay, 846, from London, 5th July, General, to Strachan & Thomas.  
 Nov. 15, *Courier*, Russian steamer, Lemerofsky, from Hakodate, 590, November 10th, General, to Walsh, Hall & Co.  
 Nov. 15, *Volga*, French steamer, Flambeau, 960, from Hongkong, Mails and General, to M. M. Co.

## DEPARTURES.

Nov. 8, *Clarisina*, British barque, Rickaby, 461, for New York, Tea, despatched by Cornes & Co.  
 Nov. 9, *Amoy*, Swedish barque, Healing, 283, for Kobe, Ballast, despatched by The Captain.  
 Nov. 10, *John Nicholson*, British ship, Grierson, 685, for China, Ballast, despatched by Gilman & Co.  
 Nov. 11, *Nil*, French steamer, Samat, 1,006, for Hongkong, Mails and General, despatched by M. M. Co.  
 Nov. 11, *Endeavour*, American ship, Warland, 967, for Foochow, Ballast, despatched by Walsh, Hall & Co.  
 Nov. 12, *China*, American steamer, Cobb, 4,000, for Hongkong, Mails and General, despatched by P. M. S. S. Co.  
 Nov. 13, *Oregonian*, American steamer, Harris, 1,870, for Shanghai &c., General, despatched by P. M. S. S. Co.

## PASSENGERS.

Per British steamer *Avoca* from Hongkong.—Messrs. J. W. Parish, Jones, Naganity, Bolmida, Reli, Netto, Ohl, Hahuman, Webber, Schmidt, and Silveira, Commander Leet, R. N.  
 Per P. M. S. S. *China*, from San Francisco: For Yokohama.—Messrs. George Greville, A. Stirling, E. G. Prince, U.S.N., W. H. Taylor, J. A. Spoor, H. D. Littlefield, Arthur C. Macley, G. Mayer, Rev. H. H. Leavitt, H. Nakai, H. E. Kawamorro, Tanemoto, Gnyekawa, T. Matamulla, R. Kuki, Henry Powell, Tocka Ho-he, David Robertson, Robert Holburn, Mrs. Gefney and 3 Children. For Shanghai and way Ports.—Rev. C. J. Blanchet, Rev. W. B. Cooper. Rev. Jno. Hykes, Rev. W. F. Walker, Wife and 2 Children, Rev. J. H. Pyke and Wife, Rev. A. J. Cook, H. H. Plagge, Miss Buller, Rev. B. E. Edgill and Wife, R. A. Garside, C. T. Layton, Miss Edith Freeman, Miss Eddie Mayfield, W. B. Pryor, Mrs. J. A. Perkins and Ch., Mrs. E. C. Hart and 3 Children, Mrs. F. F. Hardy, E. G. Lapham, Jyokitsi, Miss Onatsu, and Chas. H. Fisher. For Hongkong.—Wong Shing and 5 Children, Julio Leatch and 500 Chinese.  
 Per American steamer *Golden Age*, from Shanghai.—H. E. Viscount San Januario, Portuguese Minister to Japan, Mr. P. G. Messier, Secretary, and Mr. A. Moran Carvalho, Attache, Bishop Zanol, Rev. N. J. Plumb, Rev. Dr. Brown, Messrs. Pearson, W. H. Talbot, Mr. and Mrs. Godfrey, Rev. J. Errord, Mr. and Mrs. Minami, Mr. C. Rasch, and 5 Japanese, in the cabin; 3 Europeans, 49 Japanese, and 7 Chinese, in the steerage.  
 Per American steamer *Oregonian*, for Shanghai &c.—Messrs. H. McGregor, Rev. V. C. Hart and family, H. Foss, Lt. H. A. Digby, Rev. W. F. Walker, S. Churchill, Kulin, wife and servant, Rev. M. D. Plumb, Keg, T. Thomas and family, F. Haskell and wife, Rev. H. D. Cook, Rev. John Hykes, Rev. H. Pike and wife, Mr. Hunter, Rev. B. E. Edgill and wife, Lt. Com. Shepard, U. S. N., Mr. W. P. Mangum, Miss Freeman, Mr. Perkins and son, Geo. C. S. Southworth, Edward W. Southworth, M. L. Southworth, Miss Mayfield, Mr. Joseph, Rev. H. Leavett, and 3 Japanese, in the cabin; and 14 Japanese, in the steerage.  
 Per French steamer *Volga*, from Hongkong.—M. and Madame Thissen, Messrs. Namoura, Dubosquet Larigree, Nishimima, Lee, Y. Lee, Kondo, Isuda, Dumertier, Macpherson, De Groote, wife, sister in law and 4 children, M. le Baron D'Anethun, M. De Boissosinade de Fontarabie, M. Hammonstade, Ischibani, Ynagaki, M. James, les Sœurs Mathilde, St. Ephraim, St. Marthe, St. Gregoire, M. Vesterviel, wife and child, Zamada, Uchima, and Nezamaya.

Per American steamer *Golden Age*, from Shanghai:—  
 Treasure ..... \$498,424.

Per American steamer *Golden Age*, from Shanghai:—  
 Treasure ..... \$498,424.

Per American steamer *Golden Age*, from Shanghai:—  
 Treasure ..... \$498,424.

## CARGOES.

Per American steamer *Golden Age*, from Shanghai:—  
 Treasure ..... \$498,424.

## REPORTS.

The British steamer *Avoca* reports strong monsoon gale, with sea, as far as Tung-Ying; thence to port, moderate Northerly wind and fine weather.  
 The *Golden State* reports having crossed the equator July 28th. Passed Cape of Good Hope Sept. 2nd; South Cape of Van Diemen's Land Sept. 28th, and crossed the equator in the Pacific October 21st. Sighted Cape King on the 8th inst. Spoke the following vessels during the passage:—

July 6th, lat 35 deg., 28 N. long., 40 deg., 12 min. West, British barque *Albany*, Iquique to Cork. July 9th, 33 deg., 21 min. N. long., 43 deg., 55 min. West, French barque *Jean Paul*, Montreal to Monte Video. Aug. 24th, 32 deg., 42 min. South long., 16 deg., 56 min. West, American whaler *Charles Colgate*, cruising. Aug. 24th, Dutch barque *Ada*, Amsterdam to Batavia, Aug. 24th, Dutch barque *Tree Cornet*, Caid ff to Singapore. Oct. 8th, 24 deg., 25 min South, 170 deg., 10 min. East, American ship *Cashmere*.

The P. M. S. S. *China* sailed from San Francisco October 16th, at 12.15 P.M., with 39 Cabin passengers and 509 in the Steerage; \$337,596 Treasure and 345 tons freight. Had pleasant weather, and easterly winds the entire passage.

The steamer *Washi* returned to Port last night, her engine having broken down after leaving here 8 days since. The accident happened near Vries Island and after driving along the Coast near to Cape King, she was finally brought to anchor in Tatiyama Bay, on Sunday morning, and was towed up here last night to the Yokoska Bay.

The British ship *Windhover* reports: left London on the 6th July. Pilot left the ship off Portland 10th July, in Channel westerly winds; crossed the Equator 6th August. Light variable S.E. trades: rounded the Cape 31st August, strong gales from thence to St. Pauls Island with a heavy confused sea, passed St. Pauls 11th Sept. from thence to Christmas strong winds. Sighted Java Head 22nd September, 11 p.m. Up the China sea light northerly winds and calms. Passed through the Palawan passage, ship averaging about 30 miles per day. From abreast of Manila a continuation of strong N.E. winds. Passed through the Bullingtery Channel. Strong westerly currents to the Loochoo Islands and from thence to Yokohama strong gales at times with heavy gusts, but several sails. Off Cape Sagami 12th November, 5 a.m. Anchored last night inside of Lightship.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, NOVEMBER 15TH, 1873.

THE Mail arrivals during the past week have been the *Avoca*, from Hongkong, on the 8th instant, *China*, from San Francisco, on the 11th instant, and the *Volga* to-day from Hongkong, bringing London Mails to the 19th, 25th and 26th September respectively. The *Nil* sailed for Hongkong, on the 11th instant.

The *Mikado*, from Hamburg; *Golden State*, from New York, and *Windhover*, from London, all these sailing vessels, have also arrived during the past week.

**Treasure.**—The following treasure has been received:

Per <i>Golden Age</i> , from Shanghai, ... ..	\$498,424.
„ <i>China</i> , from San Francisco, ... ..	\$337,596.

**Cotton Fabrics.**—During the closing week a larger business has been done in Shirtings of 8½ lbs. weights at the quotations undernoted than in the preceding week, but the aggregate transactions reported do not exceed 20,000 pieces, a certain portion of which is sold to arrive. In other fabrics no business of importance has been done and the native trade exhibits an indisposition to enter into transactions of moment.

**Yarns.**—There is no business worthy of notice to be reported. Prices are nominally the same.

**Woollen Goods.**—The reports of the condition of the woollen business are generally most unfavourable. There is an almost total absence of demand, and quotations are nominal.

**Iron and Metals.**—Stocks of *nail rod* have received an accession of 120 tons by the arrival of the *Windhover*. A good enquiry had set in for this class of iron at old prices, and but for the arrival of this vessel stocks would have been materially diminished. We have to report *bar iron much neglected with heavy stocks*. Other iron is unchanged. Settlements reported comprise 420 piculs of *flat* and *round* and 3,360 piculs of *nailrod* iron.

**Sugar.**—Increased arrivals have still further depressed prices for Formosa kinds, and there is scarcely any demand at our quotations which are nominal. China Sugars remain unchanged.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**Silk.**—Since the 31st ultimo arrivals are 1,300 bales and settlements may be estimated at 1,100 Bales. In spite of unfavourable news of the money market at home the demand on this side is well sustained, and the prices which we quoted in our last show no signs of weakness.

**Silk-worm's Eggs.**—Since the departure of the French mail on the 11th instant, arrivals have been daily decreasing and the season may be considered as drawing to its close. The settlements of the past week are nearly 75,000 cards of all descriptions, which with few exceptions were the refuse of the whole season and found buyers at prices varying from \$0.75 to \$1.50.

Total settlements to date are estimated at 1,250,000 cards.

**Tea.**—Our tea market has been steadily supported during the past week, settlements amounting to 1,800 piculs. Supplies have come in on a more liberal scale, and for the last two days, owing to the chief buyers holding aloof, prices close decidedly weaker though no actual decline can be quoted.

Our market still continues poorly supplied with low-class teas, although we understand there is no lack of them in the interior, but producers hold them for too high prices to allow the Yokohama native dealers to operate.

**Rice.**—We are unable to record that any transactions have had effect in native grain. No good shipping qualities are on offer here, and in the absence of these our quotations must be considered purely nominal.

Saigon.....Unsaleable. | Japan.....\$2.10 to \$2.20 (nominal).

## MISCELLANEOUS.

## THE GREATEST WONDER OF MODERN TIMES! HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

## THE GREAT CURE ALL! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

## THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

## Notes of the Week.

THE entertainment given to Mr. De Long by the American and Dutch residents on Saturday evening last was an entire success, and deserved to be so as no pains were spared to ensure it. The late Minister's speech had a capital ring in it, and though we have elsewhere indicated such points of difference as exist between us in regard to its subject matter, no one can have listened to or read it without hearty appreciation of the sentiments which animated it.

It would be unfair to analyse any of the other speeches without analysing all, and to do this would probably lead to the opening of wounds now happily closed. These wounds, which it is so easy to say were inflicted voluntarily and gratuitously, were rather the results of surgical necessity; and those who would prevent or delay their healing are neither friends to this community nor to the nationality Mr. De Long has represented with so much approbation from his fellow citizens.

It would be a serious misfortune if anything should obstruct the course of such a movement as was initiated on Thursday week last at the Temperance Hall. But we have such a dread of the quasi facetious form it assumed, a form not easily distinguished from the ridiculous, that we shall say a few earnest words on the subject, in the hope they may assist a cause deserving the support of every man who has the interests of society at heart.

Excessive drinking has been called the vice of the Christian nations, though we should rather say it is the shameful and characteristic vice of the Anglo-Saxon race. Whatever splendid qualities that race possesses, it is almost the monopolist of a tendency to intemperance which is not confined to any special class, which education alone certainly has not successfully dealt with, which degrades it and detracts largely from its useful powers, and which seems almost ineradicable in it. The Celtic race, where it is settled in northerly latitudes, has successfully disputed the palm in this questionable pre-eminence with the Anglo-Saxon race, and the Scotch, the best educated and certainly the most religious people in Europe, are said to consume a greater quantity of spirits per head annually than any other people. Whether there is more actual drunkenness among them than among the Irish and English, or whether their climate, *physique* or habits permit of this excessive consumption without its producing the odious results of intoxication commonly seen among the former, we have no statistics on which to base any opinion. But it is certain that this intemperance is the great bane of the people of the British isles and the race and colonies which have come from their loins. If we could only deal successfully with it we should make half our goals and reformatories unnecessary, enormously reduce the heavy expense of administering justice, and save ourselves from the reproaches of other nations who envy our wealth and position, but find a gratification in pointing out our vices.

The singular want of perception of the congruous and fitting which Dickens has immortalized in the proceedings of the Brick Lane Branch of the National Teatotal Society, seems observable in the proceedings of last Thursday week. The enthusiasts of our great novelist sang a hymn to the tune of the "Jolly young Waterman," and the members of our local Society performed "No. 70 of the Hymn Book" to the tune of "Nelly Gray." The "Spider and the Fly," "Come, come away" and "God save the Queen" seem also to have come in for ingenious adaptation to the necessities of the occasion, and

with the exception of an excellent speech from the Revd. Mr. Maclay there was little to boast of in the form and substance of the proceedings. Yet we frankly confess that all these are minor objections, and we only allude to them because men are often deterred from supporting movements of this nature by the idea that they are animated by evanescent enthusiasm and pervaded by baneful fanaticism. This idea is, we are certain, without much foundation. A fastidious and well regulated man who has never even skirted the dangerous and seductive domain of excess, is repelled by violations of æsthetic propriety and prone to turn aside from exhibitions of them. Instead of becoming a supporter of the movement he turns his back upon or sneers at it, and the assistance he might otherwise easily have been induced to give is alienated by mistakes which bear but a small relation to the penalty exacted for them. Any proceeding therefore which can be reproached with such effects should be avoided, and we should have been better pleased had the recent meeting eliminated from its inauguration something which it would be unjust to characterize as intentional levity, but which certainly savours of it.

On the other hand we hope everything will be done by the promoters of the movement to make the virtue necessary for its maintenance as easy and agreeable as possible, and to associate it with every available and legitimate form of recreation and amusement. There should be chess, books, newspapers, magazines, bagatelle, music if possible, bowls and everything which stimulates the healthy activity of mind and body. The appliances necessary for all this need not be very expensive, while the pleasure derivable from an establishment so provided will be very great. Above all we hope that a large part of the management of the Institution will devolve upon those who have been mainly instrumental in establishing it, assisted by one or two of those who have given their advice and countenance to the men.

AN announcement was made elsewhere during the week that the Central Government had admitted the illegal character of the Ki-ito Aratame Kaisho, or native Silk Guild of Yokohama, and that this admission must necessarily involve its abolition. But this is wholly premature. We believe that the Government has promised to examine into its mode of procedure and course of action, with a view of seeing how far it violates any treaty stipulations; but this is all. Considering how large and important is the principle which underlies the whole question, how powerful is this Guild, how much it pays for its privileges, and how completely the guild system is bound up with Japanese notions of trade, we must not hope for too easy and rapid a solution of the difficulty before us. But on a sound decision of the question all the health and vigour of our future trade largely depend.

THE Government is said to be a heavy sufferer loser by the loss of the *Arict*, as there was a considerable quantity of machinery on board, besides a fair sum of money in gold and paper, all uninsured.

As a rule Governments are their own insurers, and it is quite clear that in view of their enormous business they are right in this course. But regard being had to the more restricted operations of this Government, it may be a fair question how far it would do well to insure its material, treasure, &c., on sea voyages. The great misfortune connected with a loss of machinery is the delay necessary to replace it, and the idleness meanwhile of a department in all probability amply officered.

WE should have been quite content to leave the late unhappy blunder made by the local Commissioner of Customs without further remark, had not a rickety defence been made for it bearing every trace of kinship with the original folly.

The defence consists in a charge that the courtesies and equal rights of diplomacy were violated by the notice issued by H. M. Consul at the instance of H. M. Minister. But if the author of that defence had been at the pains to consult clause VII. of the Convention of 1866, he would have seen that in order to avoid controversies connected with Custom House management and regulation it was provided that *the Governor—or local Authorities, as the text runs in an analogous clause in the Austro-Hungarian Treaty of 1869—should confer with the Consuls* in regard to such matters, in order that their sanction might be obtained to any new regulations. In the teeth of this clause, the Commissioner of Customs, without one word of conference with the Foreign Authorities, issues a regulation that "no claim for a refund of duties overpaid will be entertained after ten days from the date of such payment." Had the regulation provided some term like that customary with the Western nations, and which in England, by Sec. 25 of Act. 16th and 17th Vict. Cap. 107, extends over six years, (*vide Lett's Diary* for 1872, small edition) the promulgation of it by the Commissioner of Customs without conference with the Consuls would have been informal indeed on this account, but not otherwise objectionable, except in as far as it is well to check the disposition to disregard the wholesome rule of the Convention. But when, regardless of the Convention, of clear obligations, and of the courtesy due to the Foreign Authorities, a rule was issued, as ignorant in its provisions as it was arbitrary in its form, the refusal to recognize it was natural and inevitable, and the form in which this refusal was conveyed, though doubtless extremely irritating to the author or abettor of the rule, precisely that which was most striking and effectual.

THE following letter from Lord Granville to H. M. Consul has been handed us with the permission to publish it.

FOREIGN OFFICE, September 22nd, 1873.

HER MAJESTY'S CONSUL, KANAGAWA.

SIR,—I have received your despatch No. 7 of the 11th of March, forwarding the Yokohama Church Accounts for 1872, and calling attention to the debt which has been incurred by the Community and to their hope that the continuance of the Government grant may be sanctioned.

In reply, I have to state to you that I sanction a grant of four hundred pounds (£400) for the year 1872, and that I shall be prepared to authorize a similar payment for the years 1873 and 1874; but you will state to the Members of the Church Committee that Her Majesty's Government have decided that, after the year 1874, no further contribution shall be paid out of public funds to the expenses of the Church at Yokohama.

I am,

Sir,

Your most obedient humble servant,  
GRANVILLE.

The seat-holders will therefore see that unless H. M.'s Government can be induced to alter its recorded decision on this subject, the entire expense of maintaining the Church fabric and providing the salary of the Chaplain will fall on themselves.

It behoves the Trustees to take immediate steps to ascertain the feelings and views of the seat-holders upon this decision. It may be a question whether the Government should be memorialized to continue its grant for yet a year or two until the Church is out of debt and in a stronger position than at present, or whether any other course should be adopted calculated to strengthen our hands in an emergency the seriousness of which it is well to look fairly in the face.

THE Directors of the Bluff Gardens have circulated a statement in regard to the financial condition of their trust, which is sufficiently lamentable. The Gardens have broken down under the weight of the ground-rent, and the plan proposed is, that of the three years rent now due, two-thirds shall be paid by subscriptions to that extent already promised, while the Japanese Government is to be requested to forego the other third

and all future claim to ground rent, on the condition that the original subscribers abandon all such proprietary rights as they may possess or suppose themselves to possess in the property, and hand it over unconditionally to the public in perpetuity for the purposes originally contemplated as set forth in the title-deed.

WE learn that Mr. W. VON WECKHERLIN, H. N. M.'s Minister resident in Japan, having returned to Yokohama per P. M. S. *Costa Rica*, went last night, accompanied by his staff, to wait upon the Hon. C. E. DE LONG, to officially inform that gentleman that his MAJESTY KING WILLIAM III. has been pleased to create him a Knight Commander of the Order of the Netherlands Lion. Mr. DE LONG acknowledged in suitable terms the honour conferred upon him. The Order of the Netherlands Lion was instituted in 1815, by WILLIAM III., and is conferred for "merit."—*Herald*, 19th November.

WE learn that Mr. De Long's pair of carriage horses, which were sold at auction yesterday, have been purchased for the use of H. M. the Mikado for the sum of \$3,500.

There was a severe Tornado or typhoon lately in Bungo, a province in the north-eastern part of this island. Many houses were blown down, and several people were killed.—*Gazette*.

It appears that at a meeting of the Creditors of the estate of Glover & Co., held last Saturday, the 1st inst., the sum offered by the Gaimusho or department of Foreign Affairs was accepted. This would transfer the share of Glover & Co., in the mine together with all the machinery thereon, to the Japanese for \$400,000.

A lease of half of the mine was given to Glover & Co., in June 1868. The other half owned by Hizen is now held by the Kobusho or Department of Public Works.

It is rumored that the creditors will not realize more than from 30 to 35 per cent. by this sale.—*Idem*.

#### THE DEPARTURE OF MR. DE LONG.

(From the Japan Mail Summary.)

THE entertainment given to Mr. DE LONG on Saturday evening last by the American and Dutch residents in Yokohama gives us the opportunity, which we embrace with sincere pleasure, of saying a few parting words to and of him previous to his leaving this country for America. Our attitude towards the late American Minister has been one of no disguised or equivocal character, it has exposed us to a large amount of very unfounded misrepresentation in regard to our feelings towards the American portion of this community, and it would be a mere affectation on our part to pretend that the allusion by the Chairman to the adverse criticism encountered by Mr. DE LONG shortly after his arrival in this country, was not pointed at ourselves,—an inference which might savour of self-assertion, were it not that, to the best of our knowledge, we had neither competitors nor coadjutors in our ungrateful yet most necessary task. But courtesy demands that we should give the *pas* to Mr. DE LONG, and we shall reserve until later any references to ourselves.

We cannot, then, do better than take Mr. DE LONG's speech of Saturday evening as the text of our remarks.

In its frankness, its warm-heartedness, impulsiveness and transparent honesty, it was eminently characteristic of him. The almost total absence of preparation it displays—at least as regards form—of all straining after effects, the homeliness of its thought and diction, its unrestrained and unaffected warmth of feeling, afford a lively picture of a speaker who would disdain to be other than himself, and whose political career found and has left him an acute, ingenuous, warm-hearted and sincere man; while the contrasts he drew between the state of the country four years ago and that in which he now leaves it, afford irrefutable evidence that the progress it has made during this time justifies some of his sanguine hopes in regard to its future, but in entertaining which he confessed himself to be out of harmony with his audience. We are much with him when he enjoins on too many impatient critics the duty, too much neglected, of observing forbearance in criticising the acts of this Government. It should be remembered, and Mr. DE LONG reminds us of it, that more than a score of millions of men have to be convinced of the necessity for change and reform before the Government can safely move in any given desired direction, and every thoughtful man will admit that grave dangers attend the action of that government which attempts to drag a people forward by force instead of attracting them onward by persuasion and sympathy. The triumphs of diplomacy in Japan are not to be purchased by enforced concessions, demanded and yielded in a day of victory yet drawing so much upon the present strength of the nation as to leave it enervated and helpless; but rather by that amicable conference which seeks to adjust the knowledge on which our own Western civilization is founded to the condition of a nation far behind yet striving to come abreast of us,—a nation struggling with difficulties of which we have no accurate knowledge, yet calling ever more loudly and incessantly for more light, and shrinking when it comes from the blinding effect of that very light for which it is clamouring. We can imagine no just intercourse between nations which does not promise, so far at least as our reason enables us to forecast its results, to give equal advantages to both; and warm as is our incessant advocacy of a broader commercial and international policy between this country and the Western nations, it is based on the conviction that Japan has at least as much to gain from it as ourselves. And in view of this, it seems to us that Mr. DE LONG greatly increases the difficulties of those he leaves behind him to fight the battles of the Japanese people—for this is what it really amounts to—by allowing his last words to sink into the mental system of their rulers rather as an opiate than an astringent or irritant. So far as we remember no man has ever yet advanced the permanent interests of a nation who has not dared to stand up when it was necessary and withstand it to the face as regards its besetting and cherished misdeeds. A side must be taken by every man who desires to see some permanent results from his work, and he who does most for the future is certain to be most unpopular in the present. With all Mr. DE LONG's merits, he is somewhat of an illusionist, forgetting too often, as it appears to us, that the future will be according as men lay the present foundations of it. He too fondly cherishes the idea that all will come right by and by, and that if it do not, it can be put so. Our philosophy is wholly different. We have no belief in any future for society, whether regarded as man in the aggregate, or as the individual nation under consideration, which rests upon the idea of inevitable improvement. By toil and pain, by knowledge and courage,

by patience under misapprehended motive or course of action, by clear insight into the source of evils and intelligent application of the remedies which alone will cure them—by these methods only will advance be made and secured. It is pleasant to an amiable man to prophecy smooth things, and Mr. DE LONG obeys but the instincts of a genial and kindly nature in taking leave of the Japanese with gracious words on his lips. We do not for a moment impeach his sincerity; but we largely doubt his judgment in this. The chloroform which is so grateful to the sufferer should only be prescribed by him who is about to perform a painful and dangerous operation, and the greatest benefactor of the over-drugged patient—for we greatly fear the flattery to which the Japanese have been subjected has produced some action analogous to this—is he who does not hesitate to disturb a lethargy which is dangerous and may be fatal. There are times when the most tender physician will veil his nature under tones of the utmost sternness and severity, and we greatly mistake if the present moment does not demand some such course. It may seem ungracious in us, at this moment when Mr. DE LONG is leaving us and we are animated by none but good feeling towards him, to write in these terms; but time will show how far the very words uttered by Mr. DE LONG at this entertainment have increased the difficulties which the Foreign Ministers have now on their hands in regard to the revision of the treaties, or how far they may have laid or consolidated the foundation of those disappointments which may yet easily be in store for us in regard to this weighty negotiation.

Whatever may be said by our opponents, we will trust the answer of the late American Minister himself to our question:—Is this hopeful view one which he entertains without misgivings? Are we not, in the main, more right than he is? Will he dispute with us our respective interest in this country—we mean our unaffected desire for its welfare—and will he assure us he is satisfied with his mere admonition to give it time, “to be patient and kind” in regard to its policy? Our firm belief is that much more is needed. We think that without a broader commercial policy in its external relations its internal difficulties will increase, and the weight of taxation which now presses so heavily and causes so much discontent among the agricultural classes will be felt so severely that serious trouble must ensue from it. The country is poor and has been further impoverished by great and unusual expenses in its attempts to carry out the programme of internal improvement drawn up by its leaders. And whatever may have been the mistakes made in carrying it out, those leaders, as he says, deserve great credit for their attempt. But the true supplement and mainstay of this programme is an enlarged commercial policy by means of which its expenses can be defrayed without increasing the internal taxation. It is as wrong and as misleading to sing paeans over the present condition of the country as it would have been four years back, the time at which Mr. DE LONG arrived here, and of which he has drawn the picture. The special difficulties of that date are not the present difficulties; and we are undoubtedly farther on the road than we then were. But not the less has the present its difficulties, and the retiring Minister might have made their weight lighter for those whom he leaves behind to deal with them, had he insisted more gravely and earnestly upon their magnitude and his own views as to the best method of treating them.

And now we must say a few brief words in regard to ourselves and our relations with the late Minister.

Mr. DE LONG admits that he came here without diplo-

matic experience, and was directed and sustained by little else than a desire to do his duty honestly and courageously. That he was animated by these views we are perfectly sure, but was not the very inexperience which he admits the cause of errors which it was our duty to point out? And when, in our opinion, Mr. DE LONG subsequently erred in dealing with a question on which his own nation are passionate partizans in the cause of right and freedom, could we avoid pointing out where he seemed to us so to err? Where Mr. DE LONG, on the other hand, has appeared to us sound in such part of his action or views as came before the public and became the legitimate subject of criticism, who has acknowledged this more freely than ourselves? As his experience became wider, did not his views undergo a change? And when this was apparent we were entirely with him. When one of the most powerful papers in the States attacked him, it was in an article from this Journal, which that very paper had the manliness to publish subsequently, that his best, because his most obviously disinterested, defence was made. When his character was impeached, our whole endeavour was to rescue it, and we are as certain that it was unjustly impeached as that no motive but a sense of justice urged us to repel the indictment. That on one occasion very early in his history here we did him an unintentional injustice, we admitted frankly when we were convinced of our error, and we thus have nothing to reproach ourselves for in regard to the retiring Minister. Rather the contrary, indeed; for we claim to have done Mr. DE LONG some service. The inexperience which he pleaded in his speech soon brought him into contact with criticism the very object of which was to point out errors, and he is far too shrewd a man not to know the value both to society and to individuals of adverse criticism, however bitter, if just. It is the business and duty of the press to guard jealously the approaches to power, to watch those who aspire to or attain it, and fearlessly to criticize their use of it. Under this discipline the strong advance and the weak retreat; and when the strong man has won his way, it is not for those to object to it who are protected by the very rigidity of the inspection he has undergone. It is thus and by this means that men who have so fought their way are ascertained to be worthy of their position, and we have no idea of smoothing those approaches to power, for it is certain that were this done they would soon be choked with unworthy men. If any of the old Puritan lore lingers in Mr. DE LONG's mind he will hardly forget the picture drawn in the greatest of allegories of the men in armour who guarded the door of the palace to restrain from admission those who were unworthy of the honour, and of the success of him who, not discouraged, fought his way through them, and, pressing forward, was greeted by the pleasant voices of those already within.

We have done our duty; he has done his; and we part on terms which are so far better than those on which he leaves many who have always been his friends, that our early antagonism has conduced to a better appreciation of the motives of action on both sides, and left neither in doubt of the sincerity of the other. And thus we bid him very cordially farewell.

### I.

#### FOREIGN TEACHERS.

IN the articles descriptive of the Educational Institutions of the Japanese capital which have lately appeared in the columns of this journal, we confined ourselves to plain statements of facts, refraining from comment or criticism, so far as it was possible to do so. We shall in this, and future numbers, point out what we believe to be defects in the system of education in Japan, and shall endeavour to show how they may be remedied.

The statement will not, we think, be challenged by any one competent to judge it, that in a system of education, the most important instruments are the teachers.

We need spend no platitudes in this article to prove the vast influence of a teacher upon his pupils. We presume all our readers to be familiar with the significance of the teacher's position in England and America. The very mention of such names as Ascham, Arnold, Temple, and Nott, Wayland and Hopkins will do more to serve our purpose of magnifying the teacher's calling than columns of argument. The simile of the bended twig becoming the inclined tree is photographed on the memory of all whose speech is English. When, however, the teacher and the pupil are of different civilizations, the tremendous significance of the position of an instructor of the young is many-fold enhanced. If a people living under a state of national life which is fixed and not liable to change need the best of teachers, what shall we say of Japanese? We see a people busy above all else in destroying their past. We see their old ties broken, their old sanctions weakened, and their old virtues defamed. To their foreign teachers, more than to any other men, they look for help and guidance. Upon them may depend the future of this nation; whether of sound growth and fruitful maturity, or of reaction, stagnation and decay.

We must be pardoned for attempting to sketch an ideal of the true teacher, such an one as should be charged with the well-nigh sacred office of assisting to lead the rising generation of Japan into a new life.

Among the qualifications of a teacher of Japanese youth, that of a sound moral character should be the first. Among a people who put etiquette above morality, the foreign teacher, as a representative of a different, and as he believes, a better civilization, should put morals before etiquette, and be himself a moral man. In truth, honor, devotion to duty, purity of life and personal chastity, temperance in eating and drinking, loyalty to his country, to her principles and best traditions, the spurning of all shams, the refusal of all bribes, detestation of flattery, and disdain to pander to the vanity of his employers, the foreign teacher should be firmly established. He should have a sensitive pride in his profession; he should magnify his calling; he should have thorough command of his tongue and temper; he should conscientiously perform his work, shirking no disagreeable parts of it, and never allowing his enthusiasm to flag under the monotony of daily and often very prosaic toil in the class room. Though these virtues should be cultivated and exemplified more than etiquette, yet in this, the teacher should not be found wanting, and should be as polite as his scholars. The interchange of daily courtesies, patience with halting pupils when the spirit is willing, but the brain is weak; the avoidance of all personal epithets and coarse language, and attention to the amenities of dress, posture and conduct, are absolutely necessary, and help to make the teacher what he ought to be. Besides

having these moral and social virtues, the teacher should be a real teacher. He should be trained to his business, or at least have a natural fitness for it. He should know and understand his subjects, and should use the best methods of imparting knowledge, of disciplining the minds of his pupils, and of arousing in them that thirst after and enthusiasm for learning which is worth vastly more than a loaded memory or any number of acquirements. The teacher should be a student of human nature, and should suit his ministrations to the varied characters, dispositions, infirmities, or excellencies, of his pupils. A teacher of such an eager and inquisitive people as the Japanese should have no narrow mind, but should be well read, and should keep abreast of the general knowledge of the day.

All this, a teacher can be, and a large part of it he ought to be. If the Japanese can understand what manner of man our ideal teacher is, (which we doubt very much) they can get men like him;—but not with money alone.

Whether our ideal be accepted or not, let us see how far the actual *personnel* of the Japanese educational system approximates to, or diverges from such a standard. We shall draw our facts mainly from the Capitals, though we are familiar with the situation in other parts of the Empire.

The study of western languages in Japan was of a sporadic and desultory character until about three or four years ago, when the Department of Education was established. It would be as idle as unfair to charge the educational officials of that period with profound ignorance of their duties, and to sneer at them for acting like children, or a class of persons not so wise. Our only wonder is, that in this sixth year of Meiji, and of the Japanese Empire the 2533rd, with all their vast experience, they have learned so little. Assuming that any foreigner could teach his own language, and that the very fact of an adult's being able to speak so difficult a language as English was proof positive of his ability to teach it, the Japanese accepted as instructors of their youth the men of whatever sort who applied for positions, and when applicants failed, Yokohama and Tsukiji were scoured for "professors."

We should feel quite happy, were it possible to exaggerate the case, and to be accused of libel and slander, but it is unalloyed truth to say, that the majority of the "professors" in the schools of Tokei were graduates of the dry-goods counter, the fore-castle, the camp and the shambles, or belonged to that vast array of unclassified humanity that float like waifs in every sea-port. Coming directly from the bar-room, the brothel, the gambling saloon, or the resort of boon companions, they brought the graces, the language and the manners of these places into the school room. A great variety of trades and professions were represented by these gentry, yet the only known instance in which Japanese pride revolted, and by which the reputation of the *Mom Bu Sho* was endangered, was after a report had been circulated that one of the "professors" in the school was a butcher by trade. Some lingering religious prejudice doubtless had something to do with this objection to a man who had formerly slain beeves; for wherein a butcher is less qualified to be a teacher than a sailor or tinsmith does not appear to a foreign eye, though it may be perfectly clear to a native official. It is not wonderful that the smoking, chewing and plentiful expectoration of tobacco in the recitation rooms were common, and that swearing at interpreters and scholars, and the calling of such names as "fool," "idiot," "stupid" etc. were more than occasional. Four years

ago, no lady could live in the chief foreign compound in Tokei, on account of the native mistresses openly kept by foreigners. As for the incompetency of many of these persons, it were only to waste time to give instances, and besides, it is unnecessary to recount these to old residents in Japan, who know of them.

There has been some reform in these matters. Professional gentlemen trained to their work are more numerous now than of yore. The schoolmaster is abroad in the land, and he comes from, and goes to, his own place. Yet even now, things are not as they ought to be, and the *Mom Bu Sho* is bound to see that they are made so. It is the duty of the Japanese officials, and power should be placed in the hands of their chief foreign servant, to weed out all incompetent and unworthy men and replace them with trained teachers from Europe and America. It is simply an insult to bring out a professional gentleman and teacher from home to Japan and place him among men whom he cannot make his associates, and whom no school directors or trustees at home would tolerate for a day. It is a sore wound to professional pride, and a dishonour to the teacher's calling, to allow the Japanese schools to have the reputation, so long enjoyed, of being the refuges for the incompetents of every trade, and the intelligence-offices and ateliers where anybody can seek and find employment. A reform in this direction would doubtless disappoint some tradesmen who look kindly on the time-honoured system, because, through them, many a slippery creditor becomes able and willing to settle his neglected bills. The ease and grace with which so many incapables leave their old haunts, dive into oblivion, disappear into parts unknown, and emerge as "professors" in the government schools, vividly reminds one of the tactics of that aquatic fowl called a teal.

In using the term "professional teacher," we do not wish to be misunderstood. We are far from saying that no one should attempt to teach who has not actually been a teacher, or who does not intend to follow teaching as a life-long work. We are too well aware that a man can easily get inside of a very little circle of petty school-room learning and plume himself on being a "professional" teacher, while we know that a few very successful teachers in Japan have entered upon the work of teaching from necessity, or from a real desire to help in the work of civilizing this most interesting people. So far from censure, such men should receive honour and praise, and should feel justified against all narrow cavillers by their own conscientious labour and the proved results of it.

We would not fan any flames of that jealousy which is so apt to arise between the "regulars" and the "volunteers" in any service, but we wish to show that the teacher's profession is a high and honourable one, and the Japanese are in duty bound to respect it. If they wish to prove that their educational "system" is not a sham, and that all their grandiloquent assertions abroad, that they believe "education is the basis of all progress," let them do as civilized nations do, and put the proper man in every place in their schools now occupied by an improper person. Let them cease to dishonour the teacher's calling by hiring men who in mind and morals are unworthy of their post. Let them learn to value a good instructor more than they value jewels. Let them cease from the wretched economy that prompts them to pay niggardly salaries which must of necessity deter the right men from their class-rooms. Let them offer such contracts as do not make a true teacher blush to sign. Let them cease to make regulations which no man with any

self-respect can or will obey. Let them put competent officers in charge of their schools. If such are not to be found, let them confess their ignorance and ask help from men whom they can trust. Until they do these things, their system of education, now so admired by those who remain in benevolent ignorance abroad, will not cease to merit the contempt of those who know the facts.

## ITINERARY OF A JOURNEY FROM YEDO TO KUSATSU, WITH NOTES UPON THE WATERS OF KUSATSU.

By Captain DESCHARMES, of the French Military Mission. Read before the Asiatic Society of Japan, October 22nd, 1873.

(Continued.\*)

### RULES TO BE OBSERVED IN TAKING THE WATERS.

'On arriving at Kusatsu after a long journey and fatigued, it is well to repose for some days before commencing the treatment. The baths must not be resorted to in excess at first. During the first three days of treatment not more than three a day should be taken. After five or six days one may advance to five or six baths but never more than this. In general it is well for a given number of baths to take an increased number of days. (The text here is obscure) (*Do kadzu oki yoriwa hi kadzu okiwo yoshi to sa.*) The ordinary duration of the cure is three weeks, and for more serious cases from seven to ten weeks. For the gravest cases from 100 to 150 days. It is well to repeat the treatment the next year at the same season, in order that the germs of the disease may be uprooted. The number of baths should be limited, and their effect is diminished if this rule be neglected. During the first six or seven days, simple bathing should be resorted to, after this period the action of the *douche* may be submitted to. It is most dangerous to take this too early.

In order to take the bath, the water must not be entered at once. The skin must first be moistened with a towel or sponge soaked in the warm water; the hands, feet, armpits and breast. The hair must be allowed to float unfettered (this is for the natives and for women) and a *hishaku* (bowl) should be used to pour water over the knees, shoulders and head. Only after this preparation should the bath be entered. It is not well to remain too long immersed. If this is done the blood mounts to the head, the lungs become congested, vertigo ensues and consciousness is lost. It is not uncommon to see accidents of this nature happen to persons who use the baths without these safeguards. (I have been a witness of this; the natives often lose consciousness while taking excessively hot baths.)

Generally speaking, and if the virus is diffused throughout the body and into the members, syphilitic patients on taking the bath should place a folded cloth upon ulcerated portions of the body and dab them repeatedly with another cloth. In this manner the virus can be quickly expelled from the body. (Text is obscure here.)

In spite of adherence to this treatment it sometimes happens that fits of shivering are experienced, headaches, intolerable irritation of the skin over the whole body, eruptions on the skin and slight excoriations which produce distress. But these need cause no disquietude; they are signs that the disease is diminishing; the impure blood is disappearing. (Irritation of the skin more or less acute almost invariably accompanies the treatment. It is well to intermit the baths for a few days in case this irritation becomes very severe and to wash the parts most affected with white rice water. After a stay of proper duration at Kusatsu it is customary to pass a few days at

the neighbouring villages the waters of which have the property of allaying the irritation produced by the waters of Kusatsu. When the skin is irritated, and in general, it is not well on coming out of the waters of Kusatsu to rub it with force as is customary among Europeans. It must be dried by light dabbing, and hot clothes should not immediately be put on, practices recommended elsewhere by the Japanese author. It is even well to remain unclothed for a few minutes.)

It also happens at times that the sight becomes disturbed, as if foreign bodies had got into the eye or small specks, and this is very distressing. But neither need this cause disquietude. In four or five days the trouble disappears and the sight becomes stronger than before the period of treatment. In general every species of malady seems to increase at the commencement of the treatment. This arises from the fact that the malady is commencing to disappear.

In regard to the vertigo and faintings of which mention was made above, no anxiety need be felt about them. They are favourable symptoms. If the irritation of the skin under the armpits and between the thighs really become very distressing, and even if, on the patient trying to allay it, a yellowish fluid appears, this arises from the virus of the gall (*Hizen*) coming from the body. No heed need be given to this.

### METHOD OF TAKING THE DOUCHE.

The water must first be entered as above described and the patient can then go under the douche. The soles of the feet, the hams, the shoulders and head should be submitted to it: not so the chest, belly or back, for this is dangerous in each case. It is bad only to douche the affected part, or to remain under the influence of the douche too long. It is best to remain in it but a short time.

### GENERAL OBSERVATIONS FOR THE TREATMENT OF LEPROSY, &c.

For different phases of leprosy *Raidiyô*, *Namadzû*, *Tamushi*, a cautery (fire) (*issoku*; lit. one hundred points of fire, by the moxa) must be placed around the discolored spots so that the virus cannot spread. For lepers it is of small consequence to place the moxas on any part of the body whatsoever. (This phrase can only be understood after it has been explained that the Japanese only put fire to certain fixed parts of the body) the moxas are applied to each affected spot on the body and on the surface comprised in this perimeter. Four kinds of moxas are used respectively called, large, middling, small and "moxa for the face." The last is used for the face alone.

On the day fixed for this operation, a bath is taken before noon, and then interdicted. The moxas are applied at 8 o'clock (2 p.m.) The use of the bath is suspended until the following day at 10 a.m. If a bath were taken immediately after the operation the fever caused by cauterization would be exacerbated and this would be dangerous.

Whatever may be the gravity of the leprosy, the cautery must not be applied without intermission. After each application there must be an interval of five days when the moxas must be placed between the former blisters.

Be the gravity of the malady what it may, the preceding rules must absolutely be adhered to.

(A great number of the unfortunate victims of this dreadful disease are to be met with at Kusatsu. It is easy to recognize them by the sight of their bodies which are literally covered with the scars of cautery. In such numbers, indeed, do these scars exist that but for their regularity it would be imagined they were due to a natural eruption. It is pretended that no pain is felt during these cruel operations, and that a complete insensibility of the skin is one of the characteristics of leprosy. The Japanese do not regard it as contagious except through sexual contact. They add, however, that women are then attacked with leprosy.)

\* A portion of Captain Descharmes papers intervening between the section published last week and the opening of the present section enumerates the diseases for which the several waters of Kusatsu are recommended as specifics. The list is here omitted, but will be found in the Journal of the Asiatic Society which contains this paper.

One of the first symptoms of leprosy consists in a whiteness and unusual brilliancy of the skin. The disease is virtually incurable, and the severest treatment arrests its course but slightly. Its frightful effects in Japan must be known to all.)

In conclusion, the sick of all the provinces (of Japan) who require to take the waters can go to Kusatzu when they will. The inhabitants return to the mountain on the 8th day of the 4th month of each year (May). Still it would be an error to imagine that the place can only be visited at that time. If a malady takes a very aggravated form, the waters may be taken from *Shigatsu* (January—February) and even before this. But at that time of the year bathing must only be indulged in by day.

The above rules have been epitomized in the service of bathers.

#### "Me arai yu." SPECIAL SPRING FOR THE EYES.

'This spring is to be found behind the "Gozanoyu" where the water issues from a small rock-cleft. The other warm springs of Kusatzu cause a painful smarting of the eyes—probably owing to the presence of sulphate of copper. The water from this source, on the contrary, causes no smarting. Immediate benefit to the sight accrues from its use (This assertion is actually true) All cases of ophthalmia are positively cured by this water which is truly a gift of the Gods.

#### ENUMERATION OF PROHIBITIONS TO BE OBSERVED

##### WHILE UNDER TREATMENT.

Excess in eating and drinking or in any other form must be avoided, as well as too prolonged a fast; the use of the baths must be temperate and they must not be remained in too long; no bathing from mid-night to sunrise or during heavy rains or typhoons or severe thunderstorms, and the patient must not shout or sing while in the bath. He must avoid covering himself, on leaving the bath, with warm clothes which cause perspiration. (This observation would appear of questionable wisdom; but it is sanctioned by experience, and I have found myself much the worse for disobeying the rule. Excessive eating or drinking after the bath must also be avoided, as has been said above.

Those who are too fond of wine (*sake*) are not good subjects for treatment (lit. it is not advantageous, &c.) Yet it is well to banish melancholy and to keep the mind free.

To those who ordinarily digest well nothing is interdicted; but digestions which are delicate and fastidious must not be forced. During the period of treatment food must not be taken which the patient knows disagree with him in his disease.'

Thus ends this curious little work of which I have given as accurate a translation as possible, a translation which has been reviewed by Mr. Satow to whose courtesy I am indebted for the itinerary to Kusatzu (in July 1873).

I will conclude by advising travellers going to Kusatzu to finish their course of the waters by a stay of a few days at Sunawachi and Ikao, villages in the neighbourhood also possessing warm springs, and to return to Yedo through Nikko, striking the "Reiheishi kaidō" at Takasaki, or more directly, through the mountains from Ikao to Nikko. But this latter route which saves only 9 or 10 *ri* is very difficult and impracticable with luggage.

The waters of Ikao are hot (40° to 45°) and do not appear to me to contain any salt. Those who have gone through a course of treatment at Kusatzu are recommended to stay at Ikao to get rid of the eruptions and distressing irritation caused by the former waters. This assertion is well founded. The stay at Ikao is also extremely agreeable in view of its pleasant climate.

LEON DESCHARMMES, CAPT. 4TH CHASSEURS D'AFRIQUE,  
*French Military Mission of Japan.*

TABLE OF TEMPERATURES\* OBSERVED FROM THE 1<sup>st</sup> TO 31<sup>st</sup>  
AUGUST 1873.  
(From Yedo to Kusatzu—Station at Kusatzu—from K'su to Nikko.)

Date.	Morning.	Noon.	Night.	Water.	Winds.	Observations.
1	28.5	32	31	16	S. S. W.	Morning Misty. Fine.
2	27	31	31	16.50	...	...
3	25.5	29	30	15	...	...
4	25	28	27.5	15	None.	Fine; Storm in the evening (Sannokura).
5	23.5	23	23	14.5	S. W. light	Fine; Misty at night (Kusatzu).
6	20	25	20.5	15	S. S. fresh	Fine (Warm Springs 37 to 55.—70°).
7	20.5	24.5	22	14	...	...
8	21	25	24	12	None.	...
9	23	26	22	...	S. S. W.	Fine; Storm and rain at 3 p.m.
10	21	25	24	...	...	Fine.
11	22	26	23	...	None.	Cloudy. Storm at night.
12	25	26	23	11.5	Variable.	Cloudy. Incessant rain.
13	22	23.5	23	...	...	Fine; cloudy.
14	21	25.5	22	...	S. fresh.	Fine; Storm; rain.
15	20	25.5	23	...	S. W.	Fine; Storm and rain at 4 p.m.
16	20	23	30	...	Variable.	(cloudy; Great rain.
17	18	20.5	30	...	...	Constant rain.
18	18	21	21.5	...	S. W.	Uncertain.
19	20	26.5	25	14	...	Fine; Storm (at Sawatari a p.m. Warm Springs 37 to 60.
20	22	27	24	14	...	Fine; Storm (at Ikao 6 p.m. Warm Springs 40 to 45.
21	23	25	24	...	S. W. light	Overcast (Ikao).
22	25	27	28	...	S. W.	Rain (Takasaki).
23	27	27	28	...	None.	Rain Stormy (Ota).
24	23	31	28	16	...	Fine (Tochigi).
25	27	22	26.5	...	S. & S. W.	Fine, Rain at Night. Itabashi).
26	23.5	25	25	...	None.	Overcast, Rain at 6 p.m. Nikko).
27	22.5	...	25	...	...	Fine, Cloudy, Rain at 7 p.m. (Nikko).
28	21.5	22	21	...	...	Incessant rain "
29	22	23	23	...	E. & N. E.	Violent Storm (Typhoon?) (Nikko).
30	23.2	...	26.5	16	S. S. W.	Rain, fine. (Otsunomia).
31	22	...	30	...	S. W.	Fine.

The indicated temperatures are Centigrade.

(Formula for reducing Centigrade to Fahrenheit.) Multiply the degrees of Centigrade by 9, divide the product by 5, and add 32. This will give the degrees of Fahrenheit.

#### OUR NEIGHBOURHOOD.

##### PART V.

*Ad sepulchrum venimus.*—Terence.

*To the grave we come.*

The traveller journeying westward through "Our Neighbourhood," as he leaves the Main Street of the village behind and reaches the open country, will observe upon his left hand a pathway winding through the cultivated uplands—past fields of rustling barley—between tall hedgerows of Indian corn—along patches of flowering cotton,—by vegetable gardens, and under ropes of straw stretched between bamboo poles, and bearing scraps of tin, or bits of glass attached, the musical tinkle of which when agitated by the breeze is meant to warn from off the crops in the gentlest of tones the forward sparrow and the depredating rook. Beyond this cultivated ground, the pathway, plunging through a grove of dark pines and feathery bamboo, emerges in a graveyard, which is situated upon the extremity of the mountain spur on which our village stands. Here, sheltered from the bleak north wind, and kissed by southern breeze, nestles—at least so says the legend which is inscribed upon the large stone which fronts the intruder as he enters by the pathway just described—"the burial place of the Imai family from generation to generation." From the man who first "parted the grass," as he set his foot upon the field, before he turned a sod, thro' ages of tillers of the ground until the present date, when the requirements of a great city, swal-

\* The temperatures given in our last number were erroneously given as Reaumur. They should have been, as these, Centigrade.

lowing up plot and field as its suburbs extended, has absorbed amongst its population the quondam husbandman, who by force of circumstances, compelled to abandon his old occupation has turned his talents or opportunities to account in other pursuits—to the present head of the family, the *saké* merchant, and mayor of Our Village, the bones of every branch of Imai have found their resting place here. In the early morn when the sun's bright eye, peeping over the blue crest of the mountains opposite looks across a slumbering world, his earliest glance lights upon this spot, and the dew drops glistening in his light, smile back a gladsome recognition, whilst yet the blue mist hangs suspended in the valley beneath, and the spiders webs look white and solid from the moisture which is entangled in their meshes. And when the sun has climbed the hills, and the shadows shorten, and the mist has cleared away, and the sound of children's voices, and the shout of the husbandman at work, and the carol of the lark, are heard, the graveyard looks its best and brightest. The fresh pure air of morning and the sounds of life about are just as when the sleepers knew them last, ere they closed their eyes in death. These silent ones have never left their homes; they sleep amongst their friends. What are to such as they were, death's terrors? No dismal hearse, no nodding plumes, no cold and ghostly tomb distort their fancy, but when their turn comes to rest they're laid to sleep where they lived and laboured as a mother wraps an infant in her cloak and lays it down beside her, as she does her work a-field.

When the shadows lengthen out again, and the sweet-scented Narcissus, and the graceful lily bow their perfume-laden heads and close their petals, and the declining sun is sinking in the West, his last lingering look seems to rest upon the old graveyard. And when the pale moon reigns, and the noiseless bat alone is on the wing, and the evening breeze sighs through the pine-trees, and bamboos bow their graceful heads and whisper, and the tinkle of the priest's bell rises from the valley below, a feeling of sweet melancholy pervades the place. But when the wild wind raves, and rugged pines dash their gaunt arms about, and the rain-laden bamboos, bending low, bedew the graves as if with showers of tears, a grievous and overpowering sadness chokes the heart, and drives the loiterer back to seek the haunts of men. Then when the storm is over, and the morning sun breaks forth, and the smell of the bruised pines imparts a fragrance to the air, it is sweet to ruminate amongst the graves; pleasant memories of happy childhood come again; faces of dead friends appear.

The headstones of the graveyard do not differ much in shape. They consist for the most part of four-sided blocks set upright upon square bases, and either bear inscriptions only on their faces or are ornamented with figures of Jiso Sama, an effigy having a glory round his head, and carrying in his right hand a representation of an iron rod called *Shaku jō* which is strung with rings on the top thereof and in his left a ball. These last—alas! how numerous!—betoken children's graves, beside which many time a sorrowing mother may be seen in silent prayer.

The inscriptions on the stones, do not record the names by which the dead were known in life, but tell instead the date of death, and the *Kaimiō* or Buddhistic title which is conferred by the priest on every true believer after death. These titles are in many instances very fanciful and generally highly poetical. In that group of three, for instance, near the bank where grow the ferns, the stones having been recently erected, are easily read. The group consists of two parents and their child, the father is described as a "believer in the dream tomb"—the mother as "one remarkable for wifely virtues"—the infant as "a young child of the law." And again, a girl is described as "a child of promise born but to die" (lit. "the young girl who was born in vain and fell into the grave.") Another yet is called "the true believer" (lit. "the purple cloud and strains of music believing woman.") True Buddhists believe that those who live in sanctity hear strains of heavenly music and see purple clouds of glory when dying.)

The bases upon which the headstones stand have each a little basin hollowed out in their front, intended to hold water for the spirit's drinking, on either side of which is a hole

in which to stand a bamboo joint containing sprigs of evergreen called *Shikimi*. These sprigs are frequently renewed by mourning survivors, and sometimes flowers in season are substituted for them. A fresh mound having by the side thereof a tall lath (inscribed with Chinese and Sanskrit characters), and a tea cup on the top, betokens that death has lately been at work amongst the Imai. These laths or *tōba* are furnished by the priest, and a fresh one is supplied every seven days, until the forty-ninth when eight *tōba* may be seen surrounding the grave. The tea cup contains water, as being the purest offering which can be made, and is daily re-filled. When the number of *tōba* is completed, this part of the ceremonial is finished and the next step is to erect the headstone, which must be placed by the hundredth day. The *tōba* however are not taken away when this is done, but remain until removed by decay or laid prostrate by the wind. Persons of means place a small monumental tablet in their temple and another on their *butszdan*, or family altar-shelf, at home, and on the 1st, 3rd, 7th, 13th, 17th and 33rd anniversaries of the festival of *bon*, (12th day of 7th month) lights are burned before them. Each corpse interred is placed cross-legged in the coffin, and is dressed in walking costume with sandals on feet, and stick in the hand, and is supplied with six cash to pay the toll at the six cross roads which he will meet before he can pass the river which bounds the confines of Hades. Three thousand six hundred million *ri* the poor soul is supposed to travel on his way to heaven, but as he visits this earth of ours on the 12th night of the 7th month of every year, it is difficult to conjecture when his journey ends. It is said that this is one of the Buddhist mysteries which true believers must not question. The festival just alluded to is called *bon*, and is kept by lighting fires of hemp refuse before the doors of such as have dead relatives, and hanging lighted lanterns in the windows, to guide the spirits to their quondam homes and back again. Nor is it the only time on which they are supposed to revisit their friends, for it is a popular superstition that a butterfly out of season, or flying in an unusual place, is a spirit coming back to hover round his loved ones.

Yedo, 18th November.

#### REVIEW.\*

A work of this sort, copies of which are now freely circulated in Yokohama, is calculated to command more attention by the novelty and ingenuity of its methods, and the dexterous simplicity by which it appeals to the common intellect, than by the present amplitude of its development or the minute accuracy of its treatment. For although we find it frequently touching upon the broadest grounds of philological comparison—nothing less, indeed, than the reduction of the entire English tongue to a basis from which it may be swiftly and surely transformed into a popular and picturesque dialect of Japan—it does not in all respects indicate the manner in which the design is to be carried to its full completion; while in the second place, either from editorial oversight or accidental typographical confusion, its clearness and directness are too often impaired. Errors like these can not be dismissed without at least an expression of surprise in the case of a treatise intended to serve so high a public purpose as the present.

In the process of thus reducing the English language to a foundation from which it shall be rapidly converted into the lucid phraseology of another tongue or, it may be reversibly said, by which that other tongue, the modern Yokohama dialect, shall be instantaneously trans duplicated to English, we find a simplicity of method which might well mislead a hasty observer. The unknown author modestly adopts the system of Ollendorf, the one now recognised as best suited to the intellectual requirements of the masses. The plan is to introduce, in swift gradation, illustrative examples that shall lead to a complete and absorbing grasp of the minutiae of this Eastern dialect in all its broadest applications. Its narrower applications would doubtless have received attention, but for the circumstance

\* Exercises in the Yokohama Dialect, etc. Yokohama, 1873.

that none such exist. The patient followers of the pages of these "exercises" will soon discover that in the applicability of the dialect of Yokohama, all is breadth and nothing is checked by the vexatious trammels of ordinary usages of speech. As regards the execution of the plan, we find that the author aims chiefly, and in peculiar ways, at absolute simplicity, and appeals at all times rather to the pulses of the populace than to the ganglions of the learned. The adroit art by which this art of limpidity is sometimes concealed baffles the equality of most and the superiority of any. His purely original expedient for the transfer of Yokohama sounds into English vocables is an instance in point. The high theory in this matter is that the use of Italian vowel sounds, and a close restriction of the consonants to their simplest properties, is the essential practice. The author of the "Exercises" overrides this theory, for the sake of standing squarely up to the popular sense, and striking it, upon occasion, as it were, full between the eyes. He employs just such orthography as he considers best suited to his special object. More than this, when he can hope to help the memory of a student by using familiar words commonly spelled, he does so equally without fear and defiant of reproach. An example of this appears at the very outset of the lessons. The pronoun "your" is rendered "*oh my!*" solely, we are persuaded, with the view of fixing the equivalent immediately in the learner's mind, by means of a brief phrase intimate to his ears from childhood; whereas the more strictly classical "*omaye*" might require half-an-hour to fix itself in the memory, during which last time nearly the whole of the remainder of the book could be absorbed. This principle, as a rule, pervades the entire treatise, and where we detect a variation, we shall not hesitate to denounce it fearlessly, since, painful as it may be to stand for even a moment in a hostile attitude towards an author of this stamp, the interests of truth are paramount, and, whether they come first or last, must be first served. We find, to resume, the practical innovations of "*cheese eye*," which, it is useless to deny, has to the tender beginner a much clearer effect than "*chisai*," "*it suite*," which opens to the eye of struggling scholarship a far more intelligible vision than "*itsutsu*," "*ohio*," instead "*ohayau*," "*oh, you!*" "*pshaw*," "*yachts*," "*cocoa-nuts*" "*toe*" and "*coots*," instead of "*oyu*," "*sha*," "*yotsu*," "*kokonotsu*," "*to*" and "*kutsu*." Without now entering upon the old dispute of orthography, we hasten to admit at once the presence of strong advantages in the new idea. We have been informed of the case of an American gentleman, who, in a moment of choler, projected a plan for applying the most offensive epithet of his own nation to a Yokohama servant. With some effort of memory this was accomplished. The epithet, having a similar sounding prototype in Japanese, passed unheeded, but the "*Oh you*—" with which it was preceded, being misunderstood as an order, was instantly responded to by a supply of hot water, a circumstance which led to immediate scenes of painful violence. Now if the American gentleman had reflected, or rather if the fact had been well established in his mind, that "*Oh you!*"—as the present author has it—is significant of hot water, the last and most disastrous consequences of this domestic catastrophe would have been averted. He would have omitted the prefatory vocative pronoun, and contented himself with the epithet alone; the water would not have been brought, fresh ire would not have been stirred. The expense of the physician for healing the scolds would never have been incurred, and the disgraceful exposure in court would have been averted. Similarly a gentleman not long ago discharged his servant in wrath for not responding to his demand for "*Kusute*." What he wanted was his boots, which he would have got, and the servant retained his place, if the gentlemen's elementary knowledge of the dialect had been derived from this treatise. "*Kutsu*" might lie forever a germ of confusion in the mind, but "*Coots*" once mastered would never be forgotten.

But here arises a question of evasions. We insist that the author who establishes a new, perhaps a valuable theory of this sort, should maintain it pure and undefiled, whereas we have one example of open retention of the old method. Open

retention! We had almost said barefaced! We will say barefaced! The syllables "*piggy nai*" appear in place of what should obviously be "*piggy nigh*." It is useless to assail us with objections. We are totally indifferent to clamour. Collateral evidence of the analogous correctness of our position appears in the phrase "*Sigh oh*," which settles the matter beyond a doubt. On a point like this it is necessary to be explicit and imperative. We therefore protest against the "*nai*," and call for its expurgation and the substitution of "*nigh*" in future editions. In a work which may be called a cluster of gems, the single jewel of consistency must not be wanting. There must be no spots upon a sun of erudition like this. Cæsar's wife, or to follow, as gracefully becomes us for the moment, the author's new device: Seizer's wife, must be above suspicion.

The attribute of this volume that will strike the student with greatest amazement is probably the unlimited comprehensiveness of the dialect he brings to light,—which is indeed the chief condition of the velocity with which translation becomes possible. The pervading potency of a single verb, *arimas*, is clearly defined. Of another, hardly less boundless in its functions, certain specimens are introduced:—

To remove ..... *Piggy*.  
Take away ..... *Piggy*.  
Carry off ..... *Piggy*.  
Clear the table ..... *Piggy*.  
Get out of the road ..... *Piggy*.  
Etc., etc.

This multiplicity of single words is not the only startling quality of the dialect. There is also the rich and eloquent fulness of expression to which it may be brought with singular brevity. The Japanese has been accused of being a loose and floral speech. With the characteristics of that tongue in its old original and complete form, we will not now deal; but as regards this dialect, no person can deny its marvellous compactness when finding the amount of multum it is capable of reproducing by so slight a parvo as the following:—

"Where are the small cabinets you showed my friends from England last week? *Cheese eye doko?*"  
"Unfortunately they were purchased on Tuesday by a party of tourists from San Francisco ..... *Arimasen*."

The work advances, as we have said, in regular order, to the closing suggestion of how the fullest ideas existing in either language may be, without thought or anxiety, exchanged into the other. The final lesson proposes a series of English phrases to be transformed into the dialect, and, various and complicated as these are there is no greater difficulty in accomplishing the labour, upon the principles laid down, than in executing the progressive passages of the earlier pages. Last of all, a few specimens of the Yokohama language are presented for reproduction into English. Some of these are direct quotations from Shakespeare, others re-arrangements of the great poet's original lines, upon the plan of Colley Cibber. We find, for instance, the soul-rending cry of Richard thus paraphrased:—

*Ginrick-pshaw motty koy—ginrick-shaw arimasen, mar motte koe! Mar sick sick, betto drunk drunk. Oh my higgy jig jig, watarkshee pumguts sinjoe arimas. Which we will delicately venture to re-translate, as follows:—*  
"A chariot! My kingdom for a chariot! or, if the chariot be absent, a horse, according to standard editions." To which the trusty Knight replied, "My King! his horse has fallen, bleeding from a hundred wounds. As to his faithful squire, after life's fitful fever he sleeps well." To which the King—"haste, haste, ye all, or mine shall be the hand to deal forth vengeance!"

Having now laid the general outline of this remarkable work before the reader, we would fain give utterance to a few passing observations which it suggests, but, for the present, lack of space forbids us so to do. We take leave of it with regret, presenting only as a final idea of the impression it produces on our mind, that it seems to refute the declaration of Euripides, that "One who abandons his own country to dwell in another, becomes there a citizen in name, but in

speech and deed, never." We are firmly of the belief that if Euripides had seen the "Exercises, etc," he would not have ventured so hasty an assertion. It is clear that in the "Erechtheus," the author writes under the impression that no fusion and harmony of thought are possible where perfect interchange of speech is unknown; and that such interchange is beyond the accomplishment of human art. But this was two thousand years ago, when Japan, with its dialects, was yet unknown. For an utter, overwhelming, crushing refutation of the Greek poet's asseveration we have now but to turn to this new light of philology, who for the present hides himself under a bushel, but whom Fame will soon lead forth to crown with public honours.

#### BANQUET TO THE HON. C. E. DE LONG.

A large number of the American and Dutch citizens now resident in Yokohama and Yedo assembled at the Grand Hotel on Saturday evening for the purpose of entertaining the late Representative of the United States in this Country, the Honble. Chas. E. De Long at a farewell banquet prior to his departure by the *Alaska* on Thursday. The following is the text of the invitation.

YOKOHAMA, 11th November, 1873.

TO HIS EXCELLENCY CHAS. E. DE LONG,  
*Late Envoy Extraordinary and Minister Plenipotentiary in Japan.*

The undersigned citizens of the United States desire to offer to you, before your departure from Japan, an united expression of their esteem for your character; of their appreciation of the energy and fidelity with which you have defended and advanced American interests in Japan during the last four years; of their personal regard for a Minister who has been so invariably considerate and friendly towards his fellow-citizens; and of their regret at your withdrawal from the position which you have filled with so much advantage to your country and so much honour to yourself.

It has occurred to them that such an expression of their sentiments towards you might be most conveniently made by means of a public dinner, and if this would be agreeable to you, they would suggest SATURDAY EVENING, the 15th inst., as a time at which they would be happy so to entertain you, if you would kindly promise your presence with them.

(Signed)

GEORGE E. LANE, Esq., *Chairman of Committee.*  
HENRY ALLEN, JR., Esq.  
J. D. CARROLL, Esq.  
HOWARD CHURCH, Esq.  
GUSTAVUS FARLEY, JR., Esq.  
C. A. FLETCHER, Esq.  
GEORGE HURLBUT, Esq.  
H. P. LILLIBRIDGE, Esq.  
P. E. PISTORIUS, Esq.  
P. A. RAMEE, Esq.  
E. A. SCHOYER, Esq.  
JOHN G. WALSH, Esq.  
AND SUBSCRIBERS.

To which Mr. De Long replied as follows:—

Yokohama, Nov. 15th, 1873.

TO GEORGE E. LANE, Esq.

*Chairman and Members of the Committee.*

GENTLEMEN.—I have the honour to acknowledge the receipt of your courteous invitation to partake of a public dinner with you on to-morrow evening, which invitation I gladly accept.

In response to the generous sentiments you have expressed in connection with the invitation permit me to say: that you as my immediate constituency have enjoyed superior opportunities to judge of my career as the Representative of the United States in Japan; practically you represent the bulk of the commercial interests I have had subject to my charge; your commendation must satisfy all uninformed persons, and forms for me a testimonial of exceptional worth which I shall for ever treasure.

The pain caused by separation from you is alleviated in a great degree by the knowledge that I shall be remembered by you with respect; and by the further consideration that I leave your interests in most able hands; when they will be even more jealously guarded than they have been by myself.

Accept Mr. Chairman and gentlemen the assurances of my high consideration.—Yours most truly,

C. E. DE LONG.

At half past seven o'clock the company numbering some ninety gentlemen sat down to table, Captain Lane of the

Pacific Mail Steamship Company's service in the chair, supported on either side, by the guests of the evening, the Honble. Mr. De Long; the Honble. Mr. Bingham; Mr. Bauduin, Representing His Netherlands Majesty and Captain McDougall, U. S. Navy, commanding U.S. war-ship *Saco*.

After due justice had been done to the excellent dinner,

The Chairman rose to propose the first toast, "The health of the President of the United States of America and that of H. M. the King of the Netherlands." Drank with cheers.

The Chairman next proposed the health of Mr. De Long in the following terms:—

GENTLEMEN,—We have assembled this evening to bid farewell to a Minister who has long been known to all of us; whose public acts have won for him respect of men of all nations; whose private character we have learned to esteem, and whose intercourse with us has been marked by a cordiality and an earnest desire to promote our happiness and prosperity which has made us all his friends. It is now more than four years since Mr. DE LONG arrived among us to assume the duties of American Minister. He then had little knowledge of this country and he found it just emerging from the disorders of a revolutionary change in its system of Government, and in great uncertainty about its policy towards foreigners. Without much diplomatic experience, armed only with his own earnestness and ability, and with the confidence of his Government, he had to undertake the difficult task of practically re-establishing American relations with Japan under unforeseen and embarrassing circumstances. The old Treaties were his only guide, and these he had to maintain with a Government composed of men who had but recently gained power, and whose real purpose with regard to Treaty obligations were but imperfectly known. This task was arduous enough, but he brought to it the energy and clear-sightedness which he had acquired in our Western Mountains, where life and fortune depended less on the protection of Society than on individual courage and ability, and where every circumstance combined to develop a man's inherent superiority rather than to favour his accidental advantages. Among the strong men who composed that community he was a leader by common consent, and it was because he was so that he was selected for the honourable position of United States Minister in Japan. As Minister here he has honourably fulfilled the task which he undertook, and has more than met the expectations of his friends. He has conducted American affairs with so much devotion to his country's honor, with such untiring zeal for her best interests, and with such willing sacrifice of his own ease and comfort, as to restore American influence to its just position in this country and to earn for himself the esteem of all his countrymen. At the same time he has been so considerate and just in his dealings with the Japanese Government, that he has made personal friends of many of the chief men of the Empire, has persuaded them of the sincerity of American friendship to this nation, and taught them to confide in the character of an American Minister. And, if there were formerly, in this little community, some severe critics who could find little worth praise in such a man, it must be very agreeable to Mr. De Long to know, that to-day, as he is about to leave these shores, he so fully enjoys the respect of all foreigners here, that some of them now only complain that it has not been possible to admit them to participate in the honours which we this evening offer to him. So much of success ought to console our friend for whatever disappointments have attended his career here. Let us hope that in the future as in the past, difficulties and discouragements will find him always with force and patience to overcome them, and that his path may be as prosperous everywhere as it has been in Japan. He is leaving us at a moment when his experience and intelligence could not fail to prove valuable to all concerned in the welfare of this country and of the foreigners living in it; and we cannot but regret his departure, however high may be our hopes of his distinguished successor. As a Minister who has laboured most faithfully and most earnestly to advance and defend American interests in Japan, as a man who has proved himself worthy of his high office,

and as a friend whom we have all been glad to have among us, we could not allow him to leave us without expressing to him our hearty respect and regard, and our sincere wishes for his future happiness. We have met to-night with this purpose. Let us now drink to his health and prosperity and to that of his family, wish him a safe and pleasant voyage across the ocean, and, in saying farewell to him, express the hope that he will not, in the warm welcomes which await him at home, wholly forget the faithful friends he will leave behind him here.

Mr. De Long, in reply, said:—Mr. Chairman and Gentlemen. Words are inadequate to describe the emotions which animate me now. A little over four years ago I landed in Japan, a stranger to you all—a stranger to the people—to this Government,—and inexperienced in the duties which lay before me. I then met many who meet here to-night to greet me, who were kind enough then to welcome my arrival. Upon that occasion I asked of those who were there, that they would give me their confidence and lend me their counsel. I am here to say to-night that those who were present then have done so with the cordiality and honour that is becoming to men. I promised in return that if they would so do, I would put forth my best energies and devote my time to advancing American interests in Japan. By this assembly here to-night, by the speech which your Chairman has made, and which I hear you so unanimously applaud, I am led to understand that you consider I have redeemed my promise to the best of my ability. (Hear! Hear! Bravo!) The pain of the occasion which calls for friends to bid each other “good-bye” is materially palliated whenever we can drown the thought of separation in a scene of joy, and to-night we are doing so. I feel that though I am no longer empowered to speak for and represent your interests in this land, I leave them safe in the hands of my most worthy and honoured successor. We are all of us in a strange country and dwelling with a strange people. Before I take my leave of you, however unpopular may be my views, however much alone I may stand in the expression of the opinions I am about to utter, I feel that this is the time, perhaps the last occasion on which I may be heard, when I should speak the convictions which are in my heart. I discovered upon my arrival here, this strange condition of affairs in Japan: that this, the last of all the nations on the earth to enter into international relations with other States, was, by the agency of steam and electricity, to be placed fully in the pathway of progress, that its people had felt its thrill through the core of their hearts, that they were awaking, as it were, to its march, but yet that they were like men dazed by too sudden light, that they were groping in the dark, and reaching out on every side for assistance—and some of them, grasping at broken reeds, and unworthy supports. I so consider them to-day, and they have my fullest sympathy. There are those who complain of Japan, because she has not advanced fast enough. There are others who complain of Japan because she has advanced too fast. Between the two I stand as their advocate and moderator. I have found that every material advance that we have made in this land has been by the united efforts of the gentlemen who represent the various powers, and I deprecate any act either on the part of the press or an individual which would attribute to one the credit for acts which are certainly the offspring of the labours of us all. (Applause) I found that America had in this land no interests that were not common with those of other nations of the world, and that what I had to do, was, first to win confidence and respect, and then act conjointly with my associate representatives of other foreign interests. Next to win the confidence and respect of Japan, and then I should have accomplished all that could be expected. That has been my aim; and I believe that I have Japan with the confidence and the respect of my colleagues, and with the confidence and respect of the Japanese. One means I took to gain that respect was this:—I never assumed to know anything I did not understand. I never gave any advice on any subject that I was not familiar with, then I endeavoured to give such advice in every case as I would give to my brother. (Hear! Hear!) In short I have attempted to gain success here by an example and programme of honesty, and willingness to work at all times—as I believe most of

my friends will admit. I had rather stand for the time being in the opinion of the Japanese as knowing less than they expected I ought to know, than assume a knowledge of matters about which I was uninformed. Now there are those who say we have made no progress. Let me draw you one or two little pictures. When I arrived here and requested an audience with His Majesty it was with very considerable difficulty I obtained it. With the co-operation of my honoured predecessor, General Van Valkenburgh, a very worthy and distinguished gentleman, it was at last granted. How do you imagine I obtained it? I was told I might have an audience, but that his Majesty would not be observable. He would be behind screens, or tapestry. How then was I to know that he was there? (Laughter) I replied by stating that I held a letter from the President of the U. S. A. which was addressed to the Mikado, that I understood it to be my duty to deliver it into the hands of the Mikado of Japan, and that I could not deliver it unless the Mikado was there. Therefore I must insist on his receiving me in person. I must “see” him. After a long time this course was conceded. He was to appear. Then the next innovation was that the Prime Minister was to take the letter at a certain place. They had had a programme drawn out shewing the whole palace, shewing how you were to get in and how you were to get out, and where every body was to stand. I said “no, my instructions were to deliver this letter to the Mikado, and if I cannot, I am going to keep it. You understand what “keeping it” means. That means suspending relations. If you think you can afford that now, all right.” After great deliberation, I was granted an audience. I went to the old castle (which is now no more) and on entering it I threaded through corridors to an extent unknown, to the sound of the most weird and dismal music that ever saluted the ears of man; and when, finally, I reached the audience chamber, I found the whole building filled with courtiers abasing themselves on the ground with their hands upon their swords, His Majesty sitting on a throne backed by a perfect arsenal of weapons immediately within his reach,—and his swordbearer having his sword about three inches drawn out of its sheath. That was the nature of that reception. A few days ago it was my fortune and my pleasure to present my successor, the Hon. Judge Bingham. I say this for the purpose of shewing what Japan *was* and what it is *is*. On the first occasion I was escorted to the palace by perhaps five hundred troops; the corners of the streets were protected by ropes to keep back the thronging multitude, and as my predecessor and myself passed in their midst, we heard numerous uncivil remarks addressed to us and to foreigners in general. Let us now compare the circumstances of the recent audience. Judge Bingham and myself proceeded to the Palace without any escort. There were no ropes necessary to confine the people at the corners of the streets, foreigners mingled with the crowd, mechanics pursued their callings undisturbed at our approach, we reached the Castle safely and were there received by the Ministers—all in foreign dress—and afterwards by the Mikado, standing on the same level as ourselves dressed in an uniform like that of a Hussar in foreign services with cocked hat and plume. Only a few days before, too, it was my pleasure to be at the Palace with the Duke of Genoa, who was similarly received by the Mikado, who himself escorted us through the grounds, promenading for several hours with us, and finally took breakfast there, when the Emperor, who a few years ago was too great to be seen, sat down with us in foreign style with foreign knife, fork and spoon, and the same musicians who had made such hideous noises formerly were playing “Wearing o’ the Green,” the “Marseillaise,” and “Sherman’s March through Georgia.” Now I turn to a more serious subject. I claim that there has been all the material and political advancement in Japan any practical man has a right to expect within the length of time that her people have been subject to foreign intercourse. Let us take their religious question. Here I touch upon a question on which men change more rarely than perhaps upon any other. Less than four years ago, my colleagues and I attended a convention at Yedo, to endeavour to persuade this government not to persecute 4000 people at a place called Urakami on account

of their religious faith. The President of that convention was Sanjo Daijin, the present Prime Minister. The second was Iwakura, the present U-Daijin. After all our arguments had been used, we were finally told by Mr. Iwakura that this Government rested upon the Sintoo faith which taught the divinity of the Mikado; that the propagation of the Christian faith and religion tended to dispel that belief, and that consequently it was the resolve of this Government to resist its propagation as they would resist the advance of an invading army. In other words, it was none of our business what they did with their own people, and that they had determined to persecute, slay and crush any Japanese who became a convert to the Christian religion. Since then, nearly four years have rolled by, and now we know that this same Iwakura was the man who recommended this Government to release those same Christians, to restore them to their homes and liberty, and to allow them freedom of conscience; that this same Prime Minister is he who signed the decree restoring them to their rights; (Hear, Hear); that these same officers were those who ordered that the hateful edicts which stood at every corner in the streets of cities and at every crossroad in the country, denouncing Christianity and threatening punishment to those who avowed it, should be taken down out of regard to the feelings of their foreign friends. But the success did not end there. There is another and more important proof of it. We further were told at the time that these Christians should be restored and the edicts should be removed, that no man should hereafter be punished in Japan for professing the Christian religion. A short time afterwards the Rev. Mr. Ballagh called my attention to the fact that a Japanese had been arrested and punished for no other offence than having become a convert. I drew the attention of the Government and called upon them to either make known what the offence of the man was or else fulfil their promises. In reality this was a full, "square" test. That man was unconditionally released. I claim upon that one circumstance that every man, I care not what his faith may be in religious matters, will admit that as a more substantial proof that progress has been made than could be shewn to have been made in the same length of time in any other country on the globe. There is a spirit of impatience in dealing with this people shewn by some. Some say "How is it that Iwakura and the other Japanese who have travelled round the world and who have seen the advantages of civil and religious liberty should come back here impressed by them, and yet that we see no evidence of progress?" Please view this for one moment from a Japanese standpoint and imagine that these men have come back, convinced of the superiority of our civilization over theirs. Then remember that they have thirty millions of men to convince of the same thing before they can move forward in the line we would like to have them move? Give these men time. I argue that in the logical sequence of things, Japan must fall into the path of progress and march with its advance. The rosy fingers of Progress are pulling aside the dark curtains of ignorance and shewing her what true progress is, but it cannot be expected she should march as rapidly as we, possessing our fuller ideas of civilization. We come here seeing them slow to adopt our opinions. We find them saying "Mionichi" when they ought to do something to-day. (Laughter.) I have obtained such a suspicion of mind that I shall hereafter mistrust any man who tells me he is "very sorry" about anything (renewed laughter), and when any individual shall hereafter draw a very long bow I should not wish to offend him, but I shall feel very much like saying "Naruhodo." Still I look upon their theory of action as somewhat similar to the action of two men running a race. I can't possibly outstrip you, and I know it, still it is my duty to endeavour to do my best, and perhaps I may succeed in retarding you. I think these men profess to be ignorant of several things which they fully understand but feel it impossible to admit. I say then, Be charitable, be kind. Give these men a chance, and you will yet see developed in Japan results which will encourage and perhaps astonish us. In speaking to you, I speak to you as men who are performing a part in the history of this country. A minister may come into contact with the higher class, but the merchant and tradesman in their

relations with the lower classes, equally affect them, imparting education in business and teaching them our own idea of it. We have a great work to perform here, and our great stumbling block is the fact that this people are brought up according to Oriental ideas, and that the Government is unjust to the people. They farm out monopolies, and impose restrictions on trade, and it is the duty of a minister to teach them that they are following a false system, that true government is the success and happiness of the people and not the slavery of the labouring classes, that instead of taxing them one half their earnings, instead of interfering with trade, instead of debasing coins, they must withdraw from the channels of trade, and by equitable laws levy equitable taxation, bearing upon all alike. And when they have learned that great lesson, then I hope the tradesmen and merchants of Japan will have become qualified to discharge their respective trusts in accordance with the laws which govern trade. You have been kind enough to allude, Sir, to my having been one of the pioneers on the Western Coast. So I am, I am happy to boast. And if there is any one lesson taught a pioneer by his life it is that of generosity to the weak. You are pioneers in Japan, and I trust will hereafter look back upon your history here with pride and pleasure. Now, try to be generous to these men, acknowledge that whilst they may appear at times stupid, at times unwilling to keep up to what we would have them do, they have yet to teach 30,000,000 of men what they themselves have become convinced of. In a short time you will see the schoolbook and the Bible carried into Eastern Asia under the flag of Japan. We have already seen her envoy in China, the first to be received at the Court of that Power. Who would have thought that possible not long since? How can one be dissatisfied with the progress of to-day? I understand that this is a great nation—a good nation—a country filled with great resources, and (if we will be patient and kind, honest and just), with a great future before it. I have already detained you too long, but I had become interested in my theme. ("No! No!", "Keep it up!") No, I can't do it, my judgment protests against it. The curtain has dropped, so far as I am concerned, upon my connection with Japan. I am no longer representing anybody but Mr. De Long, and I feel fully competent to represent him on all occasions, but I little dreamed when I entered upon the discharge of these duties four years ago I should ever achieve such success as would entitle me to a noble meeting of gentlemen like this, representing not only one, but two powers. No matter how long or how brief my life may be, this meeting here to-night will always be treasured by me as one of the greatest joys I have experienced and as one of the richest honours that have ever been conferred upon my name (applause). If I can point to no other signal success in the world I can point to this assembly. Contrast it with what could have been assembled four years ago. You could not have assembled a corporal's guard of this meeting then. In leaving Japan, in turning over to my distinguished friend Judge Bingham and retiring from the duties which have been in my hands, I can say that I leave behind me no feelings of anything but friendship and goodwill for any man on this soil. I thank you for this generous honour, for your attention, your kindness, your confidence in me as your Minister, and your friendship when I ceased to be such. (Loud and continuous applause.)

The Chairman next proposed the following toast:

GENTLEMEN,—I have now the honor to introduce to you the Honorable JOHN A. BINGHAM who has just arrived among us to represent the American Government in this Empire. Since it was necessary to replace the Minister to whom we this day bid farewell, we can but felicitate ourselves that one so worthy to succeed him has been chosen. Our guest's distinguished career at home, his acknowledged ability and experience in public affairs, his intimate acquaintance with our National policy and legislation, and his high personal character, all qualify him for the eminent office which he has recently assumed, and we may depend on these qualities for the maintenance of the honourable position which our Country now holds in Japan. No one of us can be more anxious to have that position maintained than the retiring Minister who has so faithfully laboured to establish it, and we have his authority for

believing that in his successor's hands it is in no danger. Let us now, in the presence of the Minister whom we would have been glad to retain among us, heartily promise to his honourable successor whatever support our united and cordial goodwill can afford him, and assure him that we, citizens with him of a country to which we all look with love and pride, are ready with him to maintain the honour and good name of that country here as elsewhere, and that, under his guidance, we will make every effort to lighten his task, and by all our actions induce him to regard us with the respect and confidence that we now cordially extend to him. I propose Gentlemen, the health of the Honourable MR. BINGHAM and success to his mission to Japan.

Judge Bingham replied in the following terms :

Mr. Chairman and Gentlemen : The flower of my manhood has been given to the service of my country, the land which you happily said, Mr. Chairman, is dear to us all. During the years of my public service, whether I stood at the bar of the Senate, or before the tribunals of justice, pleading for the vindication of violated law ; or whether I stood in the Assembly of the Commons of the People, witnessing and aiding the enactment of their laws ; or whether I stood in the presence of assembled thousands of my countrymen, giving assurance anew of their readiness to surrender all things save their trust in God and the hope of a life to come, rather than surrender, that sacred and beautiful heritage, our common country ; never have I stood in any presence which more deeply impressed me than that before which I stand to-night. (Applause.) Here in this distant "Land of the Morning," are assembled an hundred men, who would grace any board in Christendom, syllabing the words of my native land, pledging their goodwill to the retiring representative of their country and my country, and assuring his successor of their hearty support in every endeavour to maintain the honour and good name of his country. It is a good name. It is a name above every mere earthly name. America ! the child of the earth's old age, the hope and the stay of struggling nations, the days of the years of whose life are no more than the days of the years of numbers of her citizens. America ! the first realization of what had been foretold by the tongues of prophets, and had been seen only in the vision of seers—a nation born in a day. Centuries are but the years of national growth, and national development under the constitutions of the old world. But four and eighty years have come and gone since that day when Washington, first of Americans and foremost of men, took the oath, never before administered, to preserve, protect and defend that Constitution of Government which placed America in the family of nations, and made the American colonies one people, with one country and one destiny. On that day America numbered no more people than London numbers to-day. They were gathered upon the Atlantic slope, beyond the crest of the Alleghenies. Since that day the children of the old world have come annually by tens of thousands and hundreds of thousands, to join in the grand experiment of representative Government. In this new immigration of the nations, the people have recovered their liberties. In these eighty four years France and Germany, Austria and Russia, the Netherlands, Sweden and Norway, England and Wales, Scotland and Ireland, all have sent their tribute of good men and true, who, casting their lot with us, and with us following the sun westward have borne our banner and the symbols of our civilization and religion into the wilderness, and have founded new commonwealths until the republic, which eighty-four years ago, numbered but three millions, to-day numbers forty millions and covers a continent, keeping watch and ward for Liberty and Justice, looking out upon Europe from her eastern and upon Asia from her western shore. (Applause.) All honour, then, to my honourable predecessor for bearing himself so well as the representative of America, the youngest and one of the foremost of nations, in this land, awakening, we trust, to a new and nobler life. I tender to him my grateful acknowledgement for having by his labours made my task here as his successor so much the lighter. I also thank the good people here assembled, citizens of the United States of America, for their words of cheer, and for their assurance that it shall be their endeavour to

aid me in maintaining the honour and good name of our common country. I have lived long enough to know that though the citizen must perish, the State may endure. The Apostle of American Democracy, when his race was run and he was about to enter into his rest, uttered a thought that should live forever when he said, "I commit my spirit to God, and my child to my country." He understood right well that the citizen is but for to-day, while the commonwealth is for all time. For myself I would have my country to be, in some sense, immortal, so that when we are gone, those that are near to us may have a country surviving us, to watch over them to be to them father and mother, and to shelter them with her impenetrable shield. (Loud and continued applause.)

The Chairman again rose and said :—

GENTLEMEN.—The desire of the subjects of His Majesty the King of the Netherlands to recognize the services of Mr. De Long as Acting Minister for their country during some time past, gives us to-night the pleasure of seeing many of them here, and allows me now to introduce to you, Mr. Bauduin the Dutch Consul at this port, and Mr. Van Den Broek Chancellor of, and representing, the Dutch Legation ; and I am sure you will heartily join in drinking the health of His Excellency Mr. Von Weckerlin, His Netherlands Majesty's Minister in Japan, now absent from Yokohama, and those of our guests who represent him.

This toast was responded to as follows by Mr. Bauduin :—

Mr. Chairman and Gentlemen, I rise in order to thank you, Mr. Chairman, most sincerely for your kind toast to H. N. M.'s Minister in Japan, and to those representing him here, and you, Gentlemen, I express to you also in the name of Mr. Van Weckerlin and Mr. Vanden Brock our gratitude for the friendly way in which you have responded to the invitation made by the Chair on our behalf. We feel much flattered by this distinction. Please allow me, Mr. Chairman, to address myself also to Mr. De Long, to whom I wish to communicate some information which I hope may also be received with pleasure by the company here present.

Mr. De Long, when you handed to Mr. Von Weckerlin, the charge of the Dutch Legation, I had the pleasure of writing to you an official letter expressing to you the thanks of the Dutch residents, of myself and other Dutch Consulate Officers in Japan for the faithfulness, zeal and kindness with which you have been watching over their interest. That letter is still of such recent date that I may remain convinced that its contents may yet be fresh to your memory. I am thankful to the Committee of this entertainment for having invited me and I wish to renew verbally before all here present the expression of our sympathy with your acts. During the time you were in charge of the Netherlands Legation, many interesting incidents happened in Japan. Your reports on them to the Home Government were found, I am told, so full of interest that some of your despatches have been brought to the more direct notice of His Majesty. This, however flattering it may be for the author, would be in the eyes of many from the side of a Government a cold recognition of much disinterested and valuable service, and I am glad that H. M. Government has done more. I have been informed on good authority and I have no doubt, but that the news will reach you within a few days, that it has pleased H. M. the King to confer upon you the Cross of Knight Commander of the Neth. Lion, and I sincerely hope that this distinction may be agreeable to you. This decoration I beg to inform you is one not lightly bestowed. It is a *reward of merit*, only granted upon recommendation of the Cabinet, and as such I trust you will receive and appreciate it. Allow me to congratulate you upon this mark of satisfaction of the Neth. Government and Gentlemen, you will please join me in giving three cheers in honour of the new Knight Commander.

This was replied to by Mr. De Long as follows :

Gentlemen, I beg to assure you this is a night of pleasant surprises. When a fortunate accident left me in charge for a time of the affairs of H. N. M.'s subjects, I felt more than a usual degree of hesitation in assuming that position. The extraordinary correctness with which the affairs of that Government are adminis-

tered must be gratifying to its representative, everything being conducted in most methodical and business-like manner, so that I might have feared as a Western American diplomat in Japan lest I might suffer by contrast when my acts became criticized at such a Court as that of the Hague. But I undertook it, though beyond the desire to do right which generally runs through the American composition I had nothing to guide me. I esteem myself extremely fortunate to have gained the friendship of the Dutch subjects in Japan; and, of the Dutch Government and above that, of the King himself. I can only say that I feel I have now some little heritage in that nation, and when I see the Dutch flag floating in some other country wherein my lot may fall, I shall imagine that I discover a smile of recognition in its glance, and that I have really been so fortunate as to win my spurs of knighthood. (*Long cheers*) Gentlemen, I really don't know how this will be understood in the Valleys of Nevada. I tell you it will be a hard thing to explain. I shall feel I have won them by fair service and I shall always endeavour to wear them with honour—both to them and to myself. But I shall have to ask the consent of the great American government about this affair. ("We give it you.") There's a little principle which runs through the constitution of the U. S. about legality and so forth, and it may be a question how an American can take any prize or decoration if he is true to his own party and his Government. When a man has a boy who has gone to school and brings back a prize, that is *prima facie* proof his boy has been a good boy while there. I shall consider this as a *prima facie* proof that I didn't abuse the trust of my own government, and I consider they ought to trust me as the best boy. I feel deeply grateful for this. I beg also to call your attention to another thing. There's a little touch of romance, of poetry, in this united gathering of the Dutch and Americans in Japan. It was from the Dutch that Japan received her first touch of civilization away back in the misty centuries, but the attempt did not prove completely successful, nor hold out bright hopes till the arrival of Perry's fleet when we became pioneers with them to conquer this country for Christianity, civilization and progress. So the Dutch and Americans are the true pioneers in Japan. Am I right? For if so those two flags should float together in Japan. Gentlemen, I thank my Netherlands friends, I deeply appreciate the honour extended to me, and I shall endeavour to deserve it in the future as well as I have striven to earn in the past. (Applause.)

The Chairman rose to give the next toast:—

GENTLEMEN.—We have the pleasure of seeing here to-night Officers of the United States Navy, who desired to unite with us in honouring a Minister whose good offices and hospitality their service has frequently enjoyed, and at their head is one whose name recalls that of his gallant father who as Commander of the United States *Wyoming*, made many friends in Japan some years ago, and, at the Straits of Simonosaki showed very strikingly that he also knew very well how to deal with those whom he had to regard as enemies. I beg leave to propose to you, Success to the American Navy and the health of Captain McDougall.

Captain Mr. Dougall replied: Mr. Chairman and gentlemen: In response to the last toast given, I rise with mingled feelings of pleasure and regret—pleasure at the high esteem in which the Navy is held by all present—regret at my inability to make a proper response. It is right that I should take this opportunity to express to Mr. De Long now that he is about to leave us the sentiments towards him of the Navy. He has endeared himself to the hearts of all naval officers by his kindness, his hospitality and more especially by the attitude he showed at the time of the sinking of the unfortunate *Oneida*. Let me assure him that in leaving here, he carries with him the good wishes of all the naval officers who are here, or have been on the Asiatic Station during the last years. In the allusion to my father Commodore McDougall I feel great pride. At that time his services were acknowledged and appreciated in a substantial manner by the residents in Japan, and I feel peculiarly gratified to find them so vividly remembered at this late date. At the Naval School the art of speechmaking was never taught, and since leaving it I have not cultivated that accomplishment: I will therefore conclude by simply returning thanks for

the great honour conferred upon the U. S. Navy and myself as one of its humblest representatives. (Applause.)

The proceedings then concluded by Dr. Brown pronouncing the blessing.

The following telegram and letter were received from General Le Gendre, Yedo, and Revd. Mr. Ballagh, Yokohama, explaining the causes of their inability to attend the Banquet:—

Yedo, November 15th, 1873.

To GEO. E. LANE, Esq.,

Chairman of Public Dinner to

HON. C. E. DE LONG.

SIR,—Mr. De Long is aware that I have not been informed until this afternoon of the hour at which our American friends were to meet him this evening at the Grand Hotel, and I now find it impracticable to join them. But I could not pardon myself were I to allow the ceremony to pass without giving expression to the wishes I make on this occasion for our late Minister's welfare, happiness and safe return home, and I beg that you will assure him that it is not without a deep feeling of regret that I am unable to do so personally.

I beg the privilege to drink with you from here the Hon. Chas. E. De Long's very good health.

Very respectfully,

CHAS. W. LE GENDRE.

Yokohama, November 14, 1873.

To GEO. E. LANE, Esq.,

Chairman of Public Dinner to HON. C. E. DE LONG.

DEAR SIR,—I thank you for the honour of an invitation to share in a complimentary dinner to our late distinguished Minister to Japan, and have sincerely to regret that my salary as a Missionary will not allow me to participate in testifying my hearty appreciation of the great services the Honble. Mr. De Long has rendered to his country, and to the cause of Christianity and Humanity in this land.

In these sentiments I am joined by the whole body of resident Protestant Missionaries, and we hope in some humble way to assure him of our sincere regard for his noble services in the past and our best wishes for his every prosperity in the future.

With best wishes for your present fitting farewell dinner.

I am,

Very truly yours,

JAS. H. BALLAGH,

Miss. of Reformed Church in America.

#### THE KI-ITO ARATAME KAISHA.

THE text of the address of the Yokohama Chamber of Commerce to the Ministers of the various Treaty Powers is as follows.

SIR,—In accordance with a Resolution passed at a Special General Meeting of this Chamber, held on the 30th ultimo, I have the honour to address you on the subject of the powers exercised by the Ki-ito Aratame Kaisha, or native Silk Guild of Yokohama.

Enclosed, I beg to hand you a copy of this Resolution, and of the preamble attached thereto. This latter will convey to you the grounds on which this Chamber invokes your aid in connection with Article XIV. of the Treaty with Japan; and, I do not hesitate to think, that however beset with difficulties the task of proof positive may be, I shall be able to lay before you such a case as will leave no doubt in your mind that Foreign merchants are actually subjected to certain inconvenience and damage from which the Treaty is able to protect them.

The Ki-ito Aratame Kaisha is a corporation composed of the native Silk houses, dealing in Raw Silk in Yokohama; no native who is not a member of this Corporation is allowed to deal in Silk, and everyone wishing to become a Silk-dealer must first be admitted to be a member of this Kaisha.

While partaking of the general character of similar associations rife in this country, this Guild has of late developed into a Corporation exercising powers such as belong only to the Government of the land, or at least able to invoke magisterial authority in the same way as if itself possessed it. Either by a Committee or a majority, it passes Laws and Regulations, and is able, apparently, to enforce them under penalty: and in this respect it exhibits a feature which there has been more and more occasion of late to observe in this and similar bodies, viz.:—that of being rather the outward organism of a Governmental department than a purely social commercial union.

On different occasions the Regulations of the Guild have given annoyance to Foreign merchants, as much from the arbitrary, and, apparently, discourteous manner of their promulgation, as from the way in which they have affected business transactions.

The immediate cause which has given rise to this representation to you, is a change made after the above fashion in the custom of allowance in weighing off Silk, followed by a refusal of a proposition of this Chamber, to commute the allowances to a fixed per centage. I need not trouble you with technical details on this head, further than, in passing, to submit that the claims of Foreign buyers are not unreasonable, in that, by reason of the moisture inherent to Silk, and other causes, buyers suffer a loss by weight of in average from one and a half to three per cent, when their shipments are re-weighed in Europe.

Every member of the Guild, that is to say, every native Silkman, has been forbidden to sell any Silk to a Foreigner, unless that Foreigner shall submit to these new Regulations: and as a fact, bargains already completed have been set aside owing to the Foreigner's refusal to submit.

And I may here state to you, that although naturally it is impossible for the Chamber to obtain any formal declarations to that effect, yet that members of the Chamber have been continually assured by various individual Silkmen, that they would gladly weigh off their Silk in any way that might be mutually convenient, if they were but free to do so.

I come now, therefore, to a point at which these deductions from the foregoing may be made:—

No Japanese has unrestricted liberty to sell Silk to Foreigners.

Before he can sell Silk to Foreigners, he has to obtain admission to the Silk Guild.

To obtain admission to the Silk Guild he is compelled to bind himself down to certain Regulations, and in support of these Regulations the Guild puts in force the laws of the land.

And, as the converse:—

It is impossible for any Foreigner to buy Silk unless he submits to do so on the terms which the Guild dictates.

A corollary to which, and unfortunately not a visionary one, is, that any day fresh Regulations, more and more obnoxious may be imposed.

I submit, therefore, on these considerations, that the powers possessed by the Ki-ito Aratame Kaisha, are a standing violation of the spirit of Article XIV. of the Treaty, and that the exercise of those powers produces obstructions to Commerce.

In conclusion, I would venture to suggest, in view of the approaching revision of the Treaties, that even should the country not be completely opened to trade, the root of these grievances would be effectually cut, if every Japanese had the right, without the intervention of the Guilds, in either the sale or delivery, to dispose of his produce direct to the Foreign buyer, either by coming himself to a Treaty Port, or through the medium of a native employé of the Foreigner sent into the country.

I have the honour to be,

Sir,

Your most obedient Servant,

A. J. WILKIN,  
Chairman.

Yokohama, 6th November, 1873.

### Extracts.

#### THE BRITISH ASSOCIATION ON SERVANT GIRLS.

(The Spectator.)

The discussion on Tuesday, on the great Servant question, by the British Association, was very natural and very amusing, but did not tend, we fear, greatly to edification. It was a capital subject to take up in the range of Economic Science, and we do not smile because Mr. Forster was President of the section, for if the Association ever achieved any direct and palpable result which all human beings could understand, it would be far more respected than it is, and we wish it to be respected. No doubt the proper subject of the Association is the Ultimate Atom, but still as there are a million of servants of all kinds in London alone, and nearly half a million of employers who would like to be in better relations with them, even a serious society may have a word to say about their status. Mrs. King had a good many words, but in spite of Mr. Forster's praise, we do not think they were precisely words of wisdom. She spoke too much from the American point of view, and ignored the peculiarities of Britons with too complete a superciliousness. She wants, as reported in the *Times*, to help both employers and employed, especially employed; and her idea for the purpose is that the middle-class in towns should give up separate residences, "which are failures," and lodge in huge co-operative clubs, or mansions, or hotels, where everything that could be done without servants should be done, and all service, strictly so called, should be performed by women arriving in relays of three,—the first the clean up, the second to cook, and the third to be the guardians of the night. That would, she says, in the end be cheap; servants living at home would

have time for the piano, and the mistresses would be much relieved from labour. Indeed, Mrs. King does not want the better class even to understand domestic management, saying that servants will never be good while their employers know anything about service. Well, we have no particular abstract objection to all that. The work of the huge barracks called houses in Vienna is actually done in that way, each household subscribing for sweeping, cleaning, cooking, and so on, though not, unfortunately, for those sanitary arrangements on which Mrs. King lays a slightly ridiculous, though it may be necessary, stress. [She is all wrong, as any doctor would tell her, and her theory very nearly killed the Prince of Wales.] The club arrangement, however, is possible; and we believe that trained indoor servants, living at home, could be created as easily as trained coachmen, and would, in some few cases, be much happier, while the apparently nonsensical rule about the mistresses' ignorance is full of sound sense, no servant being worth a halfpenny who needs more than general directions, or is ever "driven around." All that is, in the main, sound, as are most of Mrs. King's ideas about the way in which her clubs or mansions should be organised; but she entirely fails to meet two or three rather serious points. In the first place, she has not met the grand difficulty, the national character, which is as inherently opposed to living in these clubs, as it is to living in the grand hotels which their unfortunate shareholders thought would pay so well, and which in New York do pay, though often at a price Englishwomen will be loth to risk. The Englishman does not want a joint stock co-operative phalanstère, however perfect in its organisation, or however economical or useful to promote flirtation between the sexes; but a house of his own, where he is master, where things go his way, and not the community's way,—where he can live in slippers, play with his children without dread lest his childless neighbours should resent the riot, and be to all intents and purposes in a separate planet. He detests hordes of spies such as the relays of educated charwomen would be, wants to see as few new faces as possible, declines to introduce promiscuous lodgers to his wife, and would rather dine in the hall on a mutton chop, than have his own tastes superseded by half-cold relays of food he does not like sent up from a co-operative restaurant. He wants isolation, and would as soon not live, as have to live practically *en pension*. His club? Stuff about his club. A married man likes his club well enough, on occasion, just as he can live at the *table d'hôte* on the Continent? But his life is in his home, and his object in heaping cash together is to have his home to himself, of the kind he likes, and as secluded from external influence as money and management can secure. That is very weak, and unphilosophical, and un-Continental? Very much so, but that is English; and if co-operative living were as cheap as it is expensive, the Englishman would still rather live in a sanded kitchen of his own, seeking cheapness as the old farmers used to do, than be told that he must stick to a certain dinner-hour and be waited on by servants he will never see again. Mrs. King is only recommending well-managed lodgings, and anything more inferior to home than well-managed lodgings can hardly be conceived. Mr. Forster, indeed, rather approved an experiment which he was careful to say he was too old to try for himself—he would be a nice inmate of co-operative chambers, if we understand him at all, like the helmet in the Castle of Otranto!—but almost every Englishman and every Englishwoman is too old also. He wants his ways and she wants her economies and extravagances to be separate, to be screened from observation, to be their own business alone. What is to become of the children, for instance? Just imagine relays of professional day and night nurses for them, the faces they would make, the treatment they would receive, and the general effect upon their characters. Most men, and we think, all women, like all close service to be done by people they personally like and respect, and not by relays of women whom they could know nothing about, and whom they would trust about as much as they would trust cabmen. Mrs. King would be horrified if anybody suggested relays of wives, but really most motherly women would be almost equally aggravated by relays of nurses, whom any properly disposed child would pronounce "horrors," and try to put emphatically down. If bachelors and spinsters like to make boarding-houses gigantic, let them do it; but if such houses do not grow notorious for spies, quarrels, and scandals, English human nature must be very different from American.

But, says Mrs. King, the arrangement would be so nice and comfortable for servants, who now are made almost slaves. We question if female servants would find the arrangement nice at

all. In the first place, two-thirds of them would be dismissed, being superseded by clever, quick-handed waiters and upholsterers' men, who would do the waiting and cleaning work, as they do in France, a dozen times better than the women: who would not worry about trifles, and whose "characters" are matters important only to themselves. Indeed, we are not quite sure they would not supersede everybody but the nurses, many of the existing "proprieties" being conventional rules which in India, parts of Italy, and Russia are dispensed with and forgotten. The remaining one-third would just work themselves to death by doing two relays instead of one, the one not being quite sufficient to pay all the expenses incidental to separate housekeeping, even when they surrender the overfull food the present arrangement secures them every day. Has Mrs. King considered how large a portion eating makes up of a modern servant's wishes, or the inferiority of the food she would get on any system of wages the present world would bear? They would have men's society, she says, which they want. Well, absurd rules about followers are kept up in some parts of England and by some silly people, and Mrs. King there hits a weak spot; but let her talk for ten minutes to any decent Englishwoman of any class above a lodginghouse-keeper, and her ideas of the ideas of the society English servants get would receive a very considerable and, it might be, disagreeable expansion. They have, as a rule, out of lodginghouses, all the society they want. No class marries so quickly, so universally, or, on the whole, so well. As to the other idea which runs through her speculation, of servants being more familiarly and affectionately treated,—more like governesses she means—there is sense and good-feeling enough in it, but very little practicability. Governesses do not think themselves at all so well off as servants do, and in a large majority of households are regarded in the light of necessary nuisances. They can be borne with for the few years of education, they are still kept apart, and as to bearing with strangers in their position and rank throughout the whole of life, we had better import Chinese.\*

The discussion on Mrs. King's paper was, as might have been expected from the subject, rather amusingly childish. Mr. de Meschin led off by saying that perhaps if wives helped their husbands in the City things might go better, as if we all wanted to go home to wives tired out with the same thoughts, and cares, and anxieties as our own; and Sir Lushington Tilson thought "unselfishness on all sides would make this country a spectacle of concord and good-will." Certainly it would, and if we all bought boots which hurt our corns without complaining, bootmakers would be amiable tradesmen, but the object of buying boots being comfort—that is, selfishness—complaint and recrimination are still, and are likely to be, essential to the process. A mental attitude of pulpy good-will to everybody is not the object of human training. Does Sir Lushington buy his boots out of philanthropy or to please himself, judging rightly that his only obligations to the bootmaker are to state his wishes clearly to treat him civilly, and to pay his bill in proper time? Miss Becker introduced a diversion of the subject by complaining that women made their own clothes, society having as yet only reached the spinning-jenny stage; but she looks forward with rapture to a time when economic management should begin, and clothes be cut out by competent persons, and made in factories. As that happens to be the precise plan now pursued by the upper ten thousand, that must be sensible advice for servants, and we can only trust that her conscience will be unaffected by the results of the advice. All we can say is, as the result of much reading of reports, that dressmaking in factories for the rich involves something much nearer slavery than anything else in this country, and that dressmaking in factories for the poor would soon become an intolerable abomination. The Haymarket is recruited quite fast enough without that addition made by misery to vice. Even Mr. Forster was infected by his position, and talked for once in his life inconsequent twaddle, saying that Mrs. King's paper was very able, which is just what, as reported, it is not; observing that no duty is more binding than that of a mistress to her servants, that duty being precisely what Mrs. King wants to be rid of; and finally observing that he should like to see the experiment tried, though at the cost of somebody else's peace, contentment, and usefulness for work. He did indeed put down the notion that servants were rather worse off than labourers, the fact being that, except in the very unusual amount of temptation they are exposed to, they are better off than any labouring class in the country, and suffer only from the caprices of a class of employers now rapidly

\* A conclusion from which we entirely dissent. Any one who possesses a fairly large knowledge of English life will agree with us in our belief that in a gentleman's house the governess is always one of the most agreeable and cultivated of its inmates.—[Ed. J. W. M.]

dying out, who cannot get over the feudal notion that they are entitled to gratitude for being well served, and to an unlimited interference which they would never dream of exercising upon tradesmen.

## Shipping Intelligence.

### ARRIVALS.

Nov. 16, *Alaska*, American steamer, Morse, 4,010, from Hongkong, November 8th, Mails and General, to P. M. S. S. Co.  
Nov. 18, *Costa Rica*, American steamer, Williams, 1,917, from Shanghai and Ports, November 12th, General, to P. M. S. S. Co.  
Nov. 20, *Ceylon*, British barque, Leach, 895, from London, June 12th, General, to Van Oordt and Co.  
Nov. 20, *Bombay*, British steamer, Davis, 1,325, from Hongkong, November 13th, Mails and General, to P. and O. Co.  
Nov. 22, *Jan Peter*, German barque, 336, Molsen, from Hamburg, June 20th, General, to Simon, Evers & Co.

### DEPARTURES.

Nov. 16, *Caroline*, German 3 masted schooner, Paulsen, 274, for China, Ballast, despatched by the Captain.  
Nov. 17, *Maud*, British steamer, Brittain, 843, for Kobe, Ballast, despatched by the Captain.  
Nov. 18, *Avoca*, British steamer, Andrews, 1,060, for Hongkong, Mails and General, despatched by P. & O. Co.  
Nov. 20, *Alaska*, American steamer, Morse, 4,010, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
Nov. 20, *Costa Rica*, American steamer, Williams, 1,917, for Shanghai and Ports, General, despatched by P. M. S. S. Co.

### PASSENGERS.

Per American steamer *Alaska* from Hongkong. For Yokohama.—Mr. and Mrs. Henton. For San Francisco.—Messrs. Chalmers, and Agents.  
Per *Avoca*, for Hongkong.—Messrs. Sala, Ghiradotti, Vuocetiohi and native servant, Damioli, Martinetti, Boffi, Orienti, Arcellazzi, Biffi, Pini, Consonna, Mazzocchi, Radaelli, Maltecca, Thomas Smith, and Achoy.  
Per American steamer *Costa Rica*, from Shanghai.—Ed. Malet, Secretary of British Legation, China, Miers Coryell, Superintendent of Shanghai S. N. C. J. F. Twombly, E. C. Kirby, W. H. Short, H. McGregor and servant, J. Parry and servant, Shippard and servant, Roppard and servant, Von Weckerlin, 2 Japanese, 1 European, 4 Chinese, and 42 Japanese. For America.—Capt. Thos. Bossett, Capt. C. H. Wills, Jno. Hardy, and 3 Europeans.  
Per P. M. S. S. *Alaska*, for San Francisco: Hon. Chas. E. De Long and Family, Jno. Duncan, Comdr. Bunce, W. H. Burkett, M. Agrati, J. P. Reed, Mrs. Douglass and Daughter, E. D. Berry, R. Newell, Lieut. Magunnigle, Dr. Menitt, Capt. C. H. Wells, Capt. Thos. Barrett, Jno. Narcey, McAppes, Artet, Guillaume Tell and Nephew, J. Stoffell, Savio, Antongini and A. Ferrari. Steerage.—John Walsh, John Storer, Thos. Hendrick, 3 Japanese, Sam Henman, H. Zeising and Wife.  
Per P. M. S. S. *Costa Rica*, from Shanghai.—A. H. Plagge, Miss Buller, R. A. Gartside, H. Powell, W. B. Pryor, Littlefield, Dalann, Walbach, C. F. Layton, G. Albers, C. Busch, J. A. Spoor, Mr. and Mrs. Swaby, P. A. Ramio, J. F. Twombly, Watts, 4 Japanese and servants, 2 Japanese and child, 10 Japanese, and 180 in the steerage.  
Per P. & O. steamer *Bombay*, from Hongkong.—Mrs. Douglas, 2 children and servant, Mrs. Baillie and child, Miss E. Stanley, Baron Wm. Broussier, Messrs. T. Okado, E. Lerick, J. E. Cooper, T. Walker, R. Koma, E. Fusimotte, T. Okada and servant, Ginsberg and 4 Chinese.

### CARGOES.

Per *Avoca*, for Hongkong.  
Silk... .. 418 bales.  
Per P. & O. steamer *Bombay*, from Hongkong:  
Sugar... .. 2,972 Bags.  
Merchandise... .. 409 Packages.  
Sundries... .. 37 "

### REPORTS.

The British barque *Ceylon* reports: leaving London June 12th, passed the Downs on the 18th, met with strong westerly winds down channel, and passed the Lizard on the 25th, crossed the Equator July 27th: in the Meridian of the Cape 23rd of August, had strong westerly gales and heavy sea. Running the Easting down passed St. Pauls, Sept. 13th; and came through Allas Strait, Oct. 4th. Light variable winds with a southerly current coming up through Macassar Strait; the winds continuing light up to 23 deg. North; afterwards light easterly winds up to 27 deg. Took a pilot on board on 18th, and anchored here on the evening of the 19th instant.

The German barque *Jan. Peter* reports light westerly winds in the north sea and down Channel; crossed the Equator August 6th in 24° West; 47 days out found the trade winds very scant; passed the Cape September 4th and had a good run up to Bali Strait; anchoring at Banjoewanga on the 6th October to fill up water but could not get any; came up through Macassar Strait, met with light winds and a southerly current; entered the Pacific October 29th, had strong westerly wind which they carried over to the Loochoos; coming up along the coast of Japan had light northerly winds.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, NOVEMBER 22ND, 1873.

THE only Mail arrival of the past week has been the P. & O. steamer *Bombay*, from Hongkong, on the 20th instant, bringing London Mail to the 3rd October.

The Mail departures have been : November 18th, P. & O. steamer *Avoca*, for Hongkong ; November 20th, P. M. S. S. Co.'s steamer *Alaska*, for San Francisco.

The barques *Ceylon*, from London, and *Jan Peter*, from Hamburg, arriving on the 20th and 22nd instant respectively bring general cargoes.

The *Avoca*, for Hongkong, took hence 413 bales silk for Europe.

**Cotton Fabrics.**—A diminution of demand is apparent in the closing week's business, but rates for good numbers of 8 $\frac{1}{2}$ lb. *Shirtings* are stated to be unaltered. Transactions reported in *Shirtings* amount to about 15,000 pieces of all weights, the week closing with a less active demand. *Turkey Reds* have sold in moderate quantities at sustained rates, but *Velvets* appear to be in small enquiry at lower prices. The sales of other articles have been on a small scale.

**Cotton Yarns.**—A much more active week's business has to be recorded in these goods, which probably owing to the extremely favourable terms on which they are obtainable have come into greater favour. The sale of 686 bales is reported. Prices are unchanged.

**Woollen Manufactures.**—The condition of this branch of imports may be shortly described as absolutely stagnant. Quotations are of course nominal.

**Iron and Metals.**—Some demand for *nail rod* kinds exists but without affecting in any degree quotations. All other descriptions of iron are reported to be neglected by the native trade. It is difficult to forecast the probable course the metal market may take, but we are inclined, from present indications, to conclude that though *nail rod* will be maintained at present rates, or may indeed realise even higher prices, a depreciation of other forms of iron must undergo a still further decline. Stocks consist of 5,000 piculs each of *flat* and *round* and *nail rod* sorts, and 420 piculs of *hoop*. The settlements of *nail rod* are 2,500 piculs. *Tin plates*: stock 700 boxes.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**Silk.**—Since the 16th instant, arrivals have been 300 bales and purchases 450 piculs now in course of inspection.

Prices remain unchanged.

**Silk-worms' Eggs.**—Total settlements amount to nearly 1,300,000 cards. Late as it was the shipment of 362 cases made on the 20th instant, by the American mail may perhaps not be the last of the season. The stock left in Yedo and in the Interior is known to be much in excess of the wants of this country, and now it is rumoured that a portion of that reserve is to be shipped for native account. Considering the formal declarations recently published by the Japanese Government this is scarcely credible; but doubts in this respect will only be dispelled after the departure of the next American mail by which further shipments, if any are really contemplated, must be made as it is now too late to ship via Suez.

**Tea.**—A quieter feeling has been exhibited on our Tea market for the past week; buyers not feeling warranted in paying the prices demanded by the native merchants.

Settlements amount to some piculs 2,100 comprising mostly Good Medium and Fine parcels.

Supplies until within the last day or two have come in freely and the falling off in these can only be attributable to the regulations enforced by the Trade Guild.

Our export so far shows a deficiency of about one million pounds in comparison with the same date last season.

## KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

## KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all

Chemists.

**CAUTION.**—The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

## MISCELLANEOUS.

THE GREATEST WONDER OF MODERN  
TIMES!

## HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

## THE GREAT CURE ALL!

## HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

## THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

**SEVENTY YEARS OF SUCCESS**

Have proved beyond question that

**ROWLANDS' MACASSAR OIL**

In the best and safest Restorer and Beautifier of the Human Hair. Perfectly from any poisonous or mineral admixture, its certain good effects are lasting, even to the latest period of life. It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandruff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Prince 3s. 6d., 7s., 10s. 6d., equal to four small, and 21s. per bottle.

**CAUTION.**

Each Bottle has a GLASS STOPPER, instead of the Cork as formerly. All with CORK are SPURIOUS IMITATIONS. This Notice is deemed necessary, as the Proprietors have received intimation that a large quantity of Counterfeit, of the most pernicious quality, has lately been sent from France and Germany to India and the Colonies under their names.

**ROWLANDS' ODONTO,**

Or PEARL DENTIFRICE, preserves and beautifies the Teeth strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipient decay and polishes and preserve the enamel, to which it imparts a PEARL-LIKE WHITENESS.

**ROWLANDS' KALYDOR.**

An Oriental Botanical Preparation. This Royally-patronised and Ladies' esteemed Specific realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling, and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle. Sold by all Chemists and Perfumers, and at all Bazaars throughout China and Japan.

**ROWLANDS' ESSENCE OF TYRE**

never fails to produce immediately a perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Black, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle.

All these articles have been used and justly appreciated by all the Sovereigns and Courts of Europe, the Pope of Rome, and the aristocracy of the world, during the last seventy years, being of inestimable value to those who have once used them. They are sold by all Chemists, Perfumers and Bazaars throughout India, the Colonies and South America.

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. IV.—No. 48] YOKOHAMA, SATURDAY, NOVEMBER 29, 1873. [PRICE \$24 PER ANNUM.

## Notes of the Week.

A Notification from H. B. M. Minister published elsewhere announces that the freedom to export rice, barley and wheat granted in July last has been extended to the flour made therefrom. A logical sequence; yet not the less deserving of remark and conducive to prosperity.

THERE have been many resignations of their posts of Satsuma men employed in the civil and military service of the Government. The clan is evidently out of temper; some say on account of the Korean and Formosan questions, others that there are more serious but undivulged reasons moving it.

A review of the Imperial Guard was held on Saturday morning at 9 o'clock in the presence of H.M. The Mikado and in front of his present residence. The troops defiled in order before His Majesty, and the review terminated about noon.

ALTHOUGH there was some reason to apprehend that in consequence of the impracticable views of Mr. Takishimaya our community would be left without gas, we are glad to learn that there is a prospect of negotiations being re-entered upon with the view of securing a supply to the foreign settlement.

On the occasion of the *Shin-jo-Sai* or Japanese rice crop festival, on Sunday evening last, the Gas Works at Nongi Hill were brilliantly illuminated with a line of jets on the three sides of the building facing the sea, and six stars and crosses some five feet in diameter each, one of them the MIKADO's mon. Mr. TAKASHIMAYA's residence was similarly illuminated. The general arrangement of the jets produced a very pleasing effect, creditable alike to the director and the *employés* under him.—*Herald*.

THE *Herald* gives the text of the address delivered to H. I. M. The Mikado by H. E. Viscount de St. Januario, Envoy Extraordinary and Minister Plenipotentiary for Portugal, on the 20th instant. We also add His Majesty's reply. Viscount San Januario was presented to His Imperial Majesty by the Minister for Foreign Affairs.

### MAY IT PLEASE YOUR IMPERIAL MAJESTY.

My August Sovereign, His Most Faithful Majesty the King of Portugal, desiring most earnestly that the good relations so happily existing between his Kingdom and the Japanese Empire should continue and improve uninterruptedly, and being in an equal degree inspired with high consideration and regard for your Imperial Majesty, has been pleased to honour me with His trust to transmit to Your Majesty the expressions of his sentiments of amity and esteem.

In the accomplishment of this honourable duty, I respectfully give into Your Majesty's hands, the letters credential, with which my August Sovereign was pleased to entrust me for remittance to Your Imperial Majesty.

It is indeed, to me, a motive for deep satisfaction that I have been appointed to stand in Your Imperial Majesty's presence, as the representative of the Western Power that first came to the seas of these remote regions.

If the Japanese Empire has cordially extended its relations with the European powers, may it be allowed to me to recall the gratifying remembrance that this intercourse was first initiated by the Portuguese. Their example was followed; Europe stepped forth; and nation after nation has come to tie the fraternal link between the East and the West. As for me, I deem myself fortunate for having had the occasion of finding in this great Empire the grand consummation of social progress,

owing to the wise impulse given to fruitful elements, and in admiring the universality of its active commerce, I make vows for the perennial continuance of those benefits that are derived from a wise direction, applied to a people teeming in vitality and energy.

In presenting the homage of my respects to your Imperial Majesty, I will consider myself most happy if my devotion and my earnest desire to please such a high and exalted Sovereign, may bring on me Your Imperial Majesty's benevolent attention.

To which His Majesty replied :

His Most Faithful Majesty the King of Portugal, your August Sovereign, desirous of augmenting the friendly relations now existing between our respective countries, has chosen and named you His Envoy Extraordinary and Minister Plenipotentiary, by the letter of credence which we have just received.

It is well known that the people of Portugal were the first, amongst Foreigners, who came and took up their residence in this country, and while we cultivate friendly relations with the entire world, how can we forget the ancient relations which we had with yourselves?

We profit by this occasion to express our sincere vows for the prosperity of His Majesty, and the happiness of his people, and our desire that the friendship between Portugal and Japan, may be an ever increasing one.

A NATIVE contemporary says that in the provinces of Omi, Ise, Mino and Owari, heavy losses were made by the dealers in tea, in the spring; but now they are making up for them; as the producers who have been trying to hold on for the same rates, have at last been obliged to yield, and the dealers have been able to buy at such prices as will recover the former loss.—*Gazette*.

WITH the courteous permission of the Secretary and Members of the German Club, we have, as occasion has offered and their hospitality has been accepted, made some remarks upon the nature and ingredients of the entertainments they have from time to time liberally offered to the Residents of Yokohama. It is hardly necessary to say that as these entertainments have partaken almost exclusively of the character of private concerts or theatricals, the permission to make them the subjects of critical comment has been availed of only so far as general reflections upon those arts which have been illustrated or employed for the special purpose of the occasion, have extended. We have thus rather written upon the musician whose music was performed, his school and individual characteristics, than on the interpretation of his thoughts by the performer who was charged with it. We have endeavoured to show the distinctive differences between various, schools of art, their actual or past condition, their principal exponents and representatives, their rise, culminating period, or epoch of decadence, and have attempted to make these casual occasions opportunities for slight discursive essays upon subjects rarely recalled here, or recalled chiefly by the regrets which now and then bitterly cross the mind when memory associates them with pleasures beyond recall—perhaps, alas! beyond return.

The entertainment of last Saturday was an extremely agreeable one, consisting of pieces illustrative of German life, and faithful to its outlines and colour in spite of the vein of humour and even burlesque which runs through them. The first was "Monsieur Hercules" a piece of pure farce, rendered highly amusing by the antitheses of the characters of *Mahmoud* and *Cesar* on the one side and *Schreier* and *Maus* on the other. The story of the piece is thus described in the programme :

"*Mahlmann*, the Head-Master of a School, and *Schreier*, Manager of a Circus, arrive almost simultaneously from Finkenwald at a small neighbouring town which is in railway communication with Hamburg. They put up at the same hotel and announce to the servants that they are in expectation of meeting there a visitor from Hamburg who has been instructed to enquire for the "Director" from Finkenwald." But this intimation from the two "Directors" is made to different servants, each ignorant of the instructions given to the other, and hence flow all the difficulties of the situation. *Maus*, who is seeking an appointment as tutor, is the first of the expected guests to arrive, and is conducted by the servant to *Schreier's* apartment. The Manager, who supposes him to be the person he is awaiting, enquires about the Circus Establishment which he believes him to have been connected with, and concludes by asking him for some proof of his adroitness and an enquiry as to how many pounds weight he can lift with his teeth, much to the astonishment of the tutor. But the Manager's indignation is raised to its highest point when he learns from the servant that a rival *Impresario* is also staying at the Hotel, a rival whose presence there he has reason to fear. In the meantime *Cäsar*, (the "Monsieur Hercules" of the piece) arrives, and perplexes the Schoolmaster, to whose room he is introduced, by his conversation on the subject of feats of strength, horsemanship, &c., and enquiries as to the number of the latter's troupe. The "Directors" at length meet and, after an interview, discover the nature of their blunders. *Maus* and *Cäsar* are allotted to their respective employers, and the play concludes with a general invitation from *Schreier* to the company to attend an equestrian entertainment at his Circus in Finkenwald."

The opening for humorous situations here is obviously abundant. Admit only for half an hour that the Directors of the two widely differing establishments are placed in negotiation with the wrong candidate, and endless amusement can be extracted from the mistake. *Schreier* has little idea that humanity has any other vocation than to take part, either as performers or audience, in his equestrian troupe. The whole duty of man to him consists in summersaults, feats on the trapèze, and jumping through hoops, and he regards every one he meets as a possible, impossible, or lapsed acrobat. The ludicrous examination to which he subjects *Hanne*, the servant-maid at the Hotel, and subsequently *Maus*, is proof of this. The idea of requesting the latter, a *Kandidat*, and therefore the least active or saltatory of human beings, to make a high leap, is exquisitely comical; and as he cracks his whip at the bewildered graduate in theology and cross-questions him regarding his antecedents and capabilities, the incongruities elicited are delightfully humorous. Not less so are those which arise from the interviews between *Mahlmann*, the School-director for whom *Maus* is in search, and *Cäsar*, the Monsieur Hercules of the play and the natural ally of *Schreier*. *Mahlmann* wants an usher for his school, and instead of finding the usual *Kandidat* he falls in with a man whose only idea of power is that of the muscles, who balances the chairs on his feet, or holds them at arm's length to show the strength of his biceps, jumps in the air, places himself in theatrical attitudes, and imports into the sitting-room of the poor school-master all the antics of the ring and the acrobat. The conversation between the two servants *Hanne* and *August* in which the former tells with dreadful wonder of the guest in the neighbouring room standing on his head, is very amusing; and when *August*, with infinite diffidence and hesitation, requests the bewildered school-director to perform this feat for his special gratification, the comicality of the request naturally provokes abundant laughter. "*Sie wollen es nicht übel nehmen*" (you won't take it amiss) says *August* to the wondering grey-headed man when preferring his strange request.

The plot of the second piece, "Papa hat's erlaubt" is as follows:

"*Dr. Liebrecht*, a poet and novel writer of considerable celebrity, is visited by *Budicke*, a masterbutcher, who comes with the intention of complaining that his daughter *Elise* has been so enchanted by the Poet's delightful productions as to prove quite intractable on the subject of marriage with a soap-boiler

whose pretensions her father favours. He finds the author absent, but observing from his photograph that he is old, resolves to send his daughter to seek an interview with him in the hope of dispelling the charm which poetry and romance have lent to the character of *Liebrecht*. Pending her visit, however, *Aurora Nebelkopf*—an amateur authoress—obtains access to the poet and disturbs his literary labours by insisting upon describing to him the plan of a dramatic work which she at length leaves in his hands for examination. Vexed beyond measure by the intrusion of the *bas bleu* and an interview with his wife, (an excellent but prosaic person), he declines to receive *Elise* when she comes to see him, and enjoins his nephew *Karl* to relieve him of the annoyance of the interview. *Karl* gladly undertakes the task. He is charmed with the grace and enthusiasm of the young girl, and she, already predisposed in favour of one whom she adores as a poet, is still more attracted to him. They improvise a stanza; he embraces her, saying, "Papa permits it" and they part mutually enamoured, *Karl* carrying off his uncle to a champagne breakfast. Meanwhile *Elise* returns to show her lover a book of her poems. She meets *Dorothea* who tells her that she is the Doctor's wife. Overpowered by this news she leaves the house, to which *Liebrecht* returns, followed shortly after by *Budicke*. *Budicke* reproaches him with having interfered with his daughter. The Doctor denies this, and, on the supposition that he is addressing the father of *Aurora*, protests his innocence. *Budicke* leaves him, but shortly returning announces that he consents to the marriage of *Elise* and *Karl* who, he has discovered, love each other. *Dr. Liebrecht* embraces his newly-found niece and the *vaudeville* is brought to a conclusion."

*Liebrecht* is delightful. He is a capital type of the German literary man, devoted to his work, his pipe, and his thoughts, grateful for the housewifely ministrations of his prosaic partner in life, but caring little for the fluctuations of that market to which she daily resorts for the domestic supplies. Him the rise in eggs, butter or veal affects infinitely little; he is sketching his new novel while she is chattering about her little morning bargains, and though the old *littérateur* dismisses her and her reflections upon the baseness of mankind which creates a rise in her daily expenditure, he does it with an impatience full of a pretty tenderness and consideration for his helpmate.

*Aurora Nebelkopf* comes to him in the midst of his work and begs his opinion of her unclassifiable drama, the plot of which she details with the profoundest satisfaction to herself and the utmost irritation to her listener. And we must ask pardon here for a word in praise of one of the best pieces of amateur acting it ever was one fortune to see. The dialogue between *Liebrecht* and *Aurora* was really worthy of "the boards," technically so called, for on both sides it was highly finished and effective. Her sentimental nonsense and his polite impatience; her *schwärmerei* and his anxiety to resume work; her rhapsodical rigmarole—delivered not as if assumed, but as the utterance of her real intellectual and emotional nature,—and the conflict in him between a natural urbanity and an imposed irritating restraint—all this was admirable, and showed to how great a distance the art of acting may be carried by amateurs. *Budicke* is the chief comic character in the play; and his rich bourgeois dialect, his small tradesman's horizon of the thought and his keen practicality within this small circumference, his humour, energy, and sly diplomacy in his daughter's supposed interest, made a compound as amusing as it was well represented. The *dénouement* of course gives *Elise* to *Karl*, leaving *Aurora* undisposed of, in spite of tender hopes inspired by one of the later incidents of the piece. But were she twenty times as desolate, her exit with *Ein Mann! Endlich! Aurora Morgenroth!* would more than recompense her. We have seen nothing so good as this little finishing stroke for many a long day.

We have been favoured with a prospectus of the Imperial Engineering College which has recently been established in Yedo for the education of engineers for service in the Department of Public Works, and it is highly gratifying to see that the scheme as sketched in this prospectus is of a very solid and satisfactory character. The Principal of the College is Mr.

Henry Dyer, C. E., M. A., B. Sc. of the University of Glasgow, and the Professors under him are graduates either of English, Scotch or Irish Universities. The Syllabus of subjects for study and subsequent examination embraces English, Drawing, Elementary Mathematics, Higher Mathematics, Natural Philosophy, Chemistry, Surveying and Levelling, Mineralogy, Geology, Architecture, General Construction, Construction of Machinery, Prime Movers, Principles in Naval Architecture, Machines used in Engineering, Special Construction, Hydraulic Engineering, Marine Engineering, Mining and Metallurgy.

Admission to the College will be obtained by competitive examination and the course of training is to extend over six years. A general scientific course, forming the foundation of subsequent technical application, will be pursued by each student, who must then select the branch of engineering towards which he feels most inclined and attend the special technical course demanded by that branch. A Library, Physical and Chemical Laboratory, a Workshop and Technical Museum, form parts of the scheme, and the rules by which these are to be guided and controlled are carefully laid down. The discipline and residence of students are provided for agreeably to be systems practised at home, and the employment of time, the duties of the Professors &c. are marked out with clearness and in conformity with good precedents.

The course of study is severe, extending, in Elementary Mathematics, to Spherical Trigonometry and Geometrical Conics; and in Higher Mathematics to Differential and Integral Calculus and Differential Equations. In Natural Philosophy the course comprises the Theory of Motion in all its intricacies; Dynamics, involving Statics, Kinetics, Hydrostatics and Hydrokinetics (which we presume will involve the extremely difficult problems of Hydrodynamics, for which we see no other provision made); Pneumatics, Heat, Magnetism, Electricity, Geometrical and Physical Optics, Acoustics and Astronomy.

It will easily be understood by our readers that a mastery of the elementary and higher mathematics having once been acquired, the application of them to the sciences just named follows as a matter of course; and severe as is the list of studies just given, it may be approached without fear by any true proficient in mathematics—the true organon and instrument of the natural philosopher.

And in case any one should imagine that this course is beyond the capacity of Japanese students—a fear we entertained on first glancing over the syllabus—we may mention the fact which reassured us, viz: that a young Japanese in the School of University College has lately come out first in his class in *five* subjects, including, we believe, Greek, Latin and French—an almost unheard-of success, and one in the highest degree creditable to him. But experience of the average capacity of the students will soon enable the Professors to modify the course in conformity with it, should this on mature reflection seem necessary, and meanwhile we cannot withhold the expression of our pleasure at seeing a scheme so substantial and so real inaugurated by the Government. We only trust that the tendency too often shewn by the Japanese to interfere with their higher foreign employés, will be wisely repressed in the administration of this College. A large freedom of action must be extended to its Principal, who should be allowed to mould and fashion it according to his own will, experience and judgment. On its success will largely depend the future material prosperity of this country, and we trust we may see the egress from its walls of a succession of young men bent on doing good service to Japan, and armed with the requisite knowledge to achieve the objects of their ambition.

AFTER a somewhat long interval the Amateur Dramatic Society resumed its performances last night at the Gaiety Theatre, the *pièce de résistance* of the evening being Sheridan's "Critic."

The history of the "Critic" affords another illustration of the fact, common enough in our literature, of the power of survival of a *jeu d'esprit* beyond the existence of the circumstances which provoked it and after the purpose which it was intended to subserve had been fully answered. Who cares to know the story of the "Sir Fretful" of his day, or to remember that the

oblique reflections in the early scenes of this clever farce were levelled at dramatic customs and follies which have had their day, and authors who have long since gone to rest, at peace, it is to be hoped, with their bright and genial satirist? Who cares for the petty spites, the inveterate dialikes, the meannesses and foibles Sheridan laughs at and lashes—the dramatic absurdities he burlesques, and the social extravagances he so happily employs the brightest shafts from his armoury of wit in punishing? It is sufficient that the play answered its ephemeral purpose, that it filled the exchequer of the Theatre, gave a fillip to public taste, a little temporary ease to the careless and impecunious author, and extinguished some of those small cynics who hung barking about the skirts of a great man. His end was served and well served, and the world is all the richer for the wittiest sarcasm the stage has ever seen—in itself an eternal protest against the absurd violation of Nature under all the forms of Art.

It is not difficult, we conceive, to assign a fitting cause for the success which invariably attends the reproduction of the "Critic" at the present day, apart from the wit which is its true antiseptic. Since the times of Elisabeth our stage has possessed no national character. The writers of the Restoration were French in spirit, plan and treatment, and all the prodigality of their wit was enlisted in illustration of an exotic drama which experience has proved to have had little vitality, and which the moral atmosphere of our island—"frosty but kindly"—in time destroyed. To this succeeded—by a natural revulsion of taste—the mawkishly moral school introducing heavy tragedies and such dramas as the "Gamester," the "West Indian" and the profuse outpouring of Mrs. Inchbald's serio-comic budget. This school was assuredly not English, inasmuch as it exercised only an expurgatory treatment of the same class of subjects in the main as the dramatists of the preceding period had employed their genius upon. The license and indecency were gone, but so, alas! was the wit. It had no fervour and but little nature, and it died.

In the early days of this century Sheridan, Colman and a few others supplied the stage with a *pabulum* in which nothing was indigenous but the language. Here and there, it is true, a comic countryman, an Irishman or Scotchman asserted his nationality with native humour and all that *couleur locale* of reality which a provincial dialect and provincial habits lend to the scene, and these exceptions were acceptable enough. But they were only exceptions, and the basis of the story—plot, intrigue and treatment—was, in nine out of ten cases of successful dramas, taken from a French or German source, care being observed to adapt the compound to our dramatic exigencies. The state of the drama at present is said to be, (as it has, however, at all periods of its history in England been said to be), very unsatisfactory. Our national palate requires strong spice. But our national sense of morality and *bienveillance* forbids our writers to seek their subjects in the annals of the Divorce Court, and proceedings in Bankruptcy are as yet hardly exciting enough to give point to a drama. Our dramatists are therefore forced back upon the impossible and grotesque, and disregarding *Puff's* dictum that "a play is not to show occurrences that happen every day, but things just so strange that, though they never *did*, they *might* happen" they ignore the latter condition absolutely and burlesque reigns supreme. In virtue of this the "Critic" lives to amuse an age it can no longer instruct; how much to amuse it let those say who laughed at excellent *Mr. Puff* last night.

The favourable reports which connected Mr. Spurgeon with the impersonation of the hero of this farce are by no means overstrained. His conception of the easy vagabond who enriches himself by preying upon all sorts of social vices, and is made to write a tragedy in order to show of what poor stuff some dramatists are made, was just and accurate and his treatment of the part very delicate and clever. It is no reproach to Mr. Spurgeon to say that he has the mannerism of the excellent school he has been educated in, and of which we take him to be a "forward type." He has the merit of not forcing his humour, but allows it the ease and naturalness of perfect spontaneity, while at the same time exercising a jealous regard to all the points with which his part is studded. Not one of

these fell flat, nor had a critical listener to complain of the "gag" with which some *Puff's* venture to overlay the author. His interpretation was free of course, but it was the freedom which does not impinge upon license and the *manes* of Sheridan received no molestation at his hands. He gave admirable point to the epigram of the dialogue, and the brilliant *terce* and *riposte* of that wonderful word-fencing all told—not a point was lost. Mr. Spurgeon's portraiture of Puff erred only, we conceive, in a little excess of heartiness and *bonhomie*. These lightly-moralled gentlemen are by no means so much disposed to laugh over their successful tricks. A severer manner in recounting the manoeuvres of his profession would, we conceive, have been more in harmony with the character, and if we mistake not—though this we confess we care less for—the current tradition—*quantum valeat*. Voice, by-play and feature were admirably managed, and all that patience and aptitude could do for Puff was done by this accomplished amateur.

The part of *Sir Fretful Plagiary* is very commonly associated with that of Puff and is taken by one and the same performer: last night, however, it was ordered differently. The part is one which puts most amateurs out of their depth; it is difficult to render and ungracious, and enlists no sympathy in the audience. The native good-nature of the gentleman who impersonated this most nervous of the *genus irritabile* was almost too great for his rôle, but his rendering was careful and studied. His only fault was, indeed, that he made us almost to like Sir Fretful, who was, we take it, a very porcupine of angry sensitiveness. When we say that *Dangle* was represented in all his absurdity by Mr. Newcome with his usual care, and that Mr. Pringle did his best for *Sneer*, our readers may assume that the parts were very adequately filled.

The great business of the characters of the tragedy is to make the humour as broad as possible, and in this we are bound to say they succeeded. Lord Burleigh compressed a whole century of wisdom into his nod and convulsed the audience by the time-honoured trick of shaking the powder from his wig. *Sir Christopher Hatton* and *Sir Walter Raleigh* received every care at the hands of their respective representatives and made the usual hits, and, assisted by the Governor, the Earl of Leicester and the Master of the Horse formed that famous "orthodox quintetto" who pray with such convulsing unanimity. The retrenched acting-edition has shorn the part of *Whiskerandos* of much of its original glory and Mr. Francis prudently abstained from much "gagging," a sort of embroidery which actors use with some frequency in this rôle. He was however sufficiently ridiculous and made the most of the situation. The slight part of the *Beefeater*, also, which has always been a favourite, received due care at Mr. Vernon's hands and his

Am I a Beefeater now?

Was the very pink of melodrama. But Mr. Vernon is obviously no novice in the *coulisses*.

We have purposely left the ladies as a final *bonne bouche*. The love-lorn *Tilburina* was charmingly presented by Mrs. Fredericks, a lady who, by this time, must feel quite at home in broken-hearted damsels and distracted heroines and who was really as naturally unnatural as the extreme breadth of our dramatic horizon allowed. Her entrance was excellent and provoked just applause, and her mangling of the metre in the mad scene was admirable fooling. Mrs. Fredericks has certainly contributed a fair share to the general success. Miss Herbert's *Confidante* is a small part but was very amusingly played by that pretty and polyglot lady, and the two nieces were appropriately stiff and awkward in manner and gesture. The usual "magnificence" terminated the play.

It is somewhat unlucky for Mr. Charles Selby that he has had to follow the "Critic" on this occasion; but surely at no time could an average audience have been reconciled to such stuff as "Hunting a Turtle." It is of the very poorest material and of the weakest story—impossible alike in subject and treatment. All concerned did their best for this trifle—and we may commend especially the exertions of Mr. Vernon and Miss Herbert on its behalf—but it is better, we conceive, to remain in total darkness than to endeavour to lighten the obscurity by replacing the brilliant coruscations of Sheridan with the

puny farthing candle of the Cockney farce-writer who was selected to follow him last night.

The Amateur brass-band under M. Michel's direction performed a selection of music commendably in the course of the evening.

OUR attention has been called to the manner in which the Commissioner of Customs notifies to the owners or consignees of goods stored in the Bonded Warehouses the expiration of the term during which they are permitted to remain there.

The Article in the Bonded Warehouse Regulations bearing on the subject is as follows:—

#### ARTICLE XIV.

The Custom House authorities may refuse to allow merchandise to remain in the Bonded Warehouses for a longer term than one year. If the goods should not be cleared within that period or within such extension of it as the Custom House authorities may see fit to grant, the latter may authorize the public sale of the goods on giving one month's notice to the holder of the Warrant or Warrants representing the said goods, or in his absence to his Consul, and also by notification of the same at the Custom House and Bonded Warehouse, or in any newspaper published on the spot. All duties and charges due upon the goods, together with the expenses of sale and notification of the same will be paid out of the proceeds, and the balance if any, will be reserved for the party or parties to whom the goods belong, subject to a reduction of one per cent per month as a fee to the Customs for retaining charge of the same.

The practice at present seems to be to notify the expiration of the term by advertisements in the public papers, without first making a private communication in regard to it. Now, it will be observed that the Article above quoted makes the sale permissive on giving one month's notice to the holder of Warrant or Warrants representing the goods, but it obviously means that this notice shall be a private official communication to the holder of the warrant or warrants, and in case this notice is unheeded, either from the absence or death of the party or his representative, then notice in the public papers shall be resorted to. It may be argued that this might involve another month's delay in closing the account, but such an argument is idle in the case of an establishment holding goods only for one year and the charges on which could hardly in any case amount to their proceeds of sale. It must also be remembered that in forty-nine cases out of fifty the private communication would suffice to call the notice of the holder of the goods to his obligations in regard to them—obligations of a slight nature and which may easily have slipped his memory. The practice at present resorted to manifests a grave want of consideration for the feelings of individuals, and an absence of all knowledge of the courtesies due from a Public Department to the Public itself.

A recent number of the *Hongkong Government Gazette* has declared the new American Trade Dollar a legal tender in the colony, and a proclamation by the Governor-General of the two Quangs has been issued in Canton giving the particulars of an official assay of the coin and establishing its currency throughout those provinces.

It is, of course, a question how far the power of the shroffs will be used to impede the free circulation of the new coin, but it is so easy for them to turn occasions of this nature into sources of profit that the chances are in favour of the success of the measure.

We cannot cease to regret that the Japanese did not avail themselves of the chance of securing this outlet for their own *yen*. Such a course would have ensured for it a steadier value here than it has found, and the profit on the coinage would have assisted, by the most legitimate means, in defraying the expenses of the Mint.

MR. E. LOUREIRO has been advanced to the Post of Consul-General for Portugal in Japan.

On the 26th instant, a foot-ball match between fifteen members of the "United Services" and a similar number of the "Settlement" came off on the Cricket Ground. Play commenced at 4 o'clock and for the first period of the hour the ball was kept near the Services goal. Mr. Abbott having caught the ball made a good run through his opponents

and, with a fine drop kick, scored a goal for the Settlement.

Ends were now changed and the service team playing more forward, after some severe encounters succeeded in getting a goal by a well directed and long kick by Private Tarring, R.M.

Time was called at 5 o'clock and after an hour's most spirited and energetic play the result was a tie. The Settlement team appeared the heaviest though at the conclusion of the game the Services seemed in the best condition. On their respective sides the names of Messrs. Hamilton, Melhuish, Abbott, Abbell, Gubbins, Captain Hill and Lieut. Smyth deserve to be mentioned for their excellent play.

A company of ex-officials in Tsuruga Ken have started the enterprise of making silk-thread by machinery driven by water power. They entertain high hopes of success, and have invested a heavy capital \$200 (?) in it. Though unable to judge as to how far their prospects are warranted, we hope success awaits them.—*Gazette*.

The school of languages, formerly attached to the Gaimusho, comprising classes in Russian, German, Chinese, English and French, has been removed to, and joined with, the School of Foreign Languages which is in the place of the old Kaiseijo; so that in this school, since the beginning of this month, five languages—English, French, German, Russian and Chinese—are taught. If the last news from Europe be true, Japan will have sore need of skilled interpreters who can speak Japanese and Russian.—*Gazette*.

#### IMPERIAL GOVERNMENT RAILWAY.

Miles open, 18.			
Corresponding week 1872.			
No. of Passengers 25,469.		Amount	\$8,652.99.

#### THE KI-ITO ARATAME KAISHA.

WE give below a translation of two documents issued by the Japanese Government in January last; the one entitled Rules for regulating the production of Raw Silk; the other containing the Rules or Constitution of the Ki-ito Aratame Kaisha, dated at the same time, and subscribed with the approval of the Chief Commissioner of Revenue.

The first-named document assumes (vide Rule II) the existence of the Kiito Aratame Kaisha or Silk Inspection Guild; but this is probably only a *Nippon-ism*, such as is frequently to be met with in Japanese writings and may be observed in the second document also:—to wit, the existence of a condition or regulation is not expressed in a preamble, but assumed, and is discovered only by allusions thereto. We presume, therefore, that these Government Rules are the basis from which has sprung the Kiito Aratame Kaisha.

Our first impression on reading this document is that it shows an excellent intent. Surely it is exactly what foreign buyers have been so long asking for. What need then of an outcry from the Chamber of Commerce? We have in it an exordium, setting forth the value of the trade in the production of Silk, and censuring careless or fraudulent methods of preparing this produce. We notice, however, that the actual regulations confine themselves to measures for the universal compulsory use of a uniform paper tare which is to be issued by the Treasury.

On turning to the second document, we find it also

commences with an excellent preamble. Then follow twenty-one Rules prescribing detailed regulations for the paternal fostering of this important branch of native industry, but here a suspicion begins to dawn upon us that these zealous guardians have an eye to some pickings out of their ward.

The Ki-ito Kaisha is to have its head quarters at the open ports, with branches in each of the Silk-producing districts of the country. No silk or silk products can be trafficked in that have not the Government paper tie, counterstamped by the producer and the local Kaisha of the district of production. It is the business of the local associations to see that these ties and stamps are duly affixed on the spot, and the open port association is to see that no produce comes on to the market that has not passed through the proper inland channels.

The open port Kaisha is further charged with the duty of a qualitative examination of the Silk which comes forward for sale (Rules X and XVII), and of stopping any that has been badly or falsely got up, returning the same to the owner, and imposing a fine upon him. Fees are to be taken "to cover the expenses of these examining offices." These appear to be fixed provisionally at one half per cent to the open port offices; we believe however that the former has been already increased to 4 *riyos* per picul on Silk.

There are then sundry regulations as to methods and machines for reeling, and some details as to how the ties are to be fastened, &c.

We come now to some very suspicious clauses. Rules VI, VII, and VIII forbid members of the local associations to send their produce for sale otherwise than through an open port office and to a member of that open port Association, or to aid and abet in so doing,—under a "suitable penalty;"—and seeing that, by prior rules, traffic in Silk that has not passed through a local Association is also forbidden, it seems pretty clear that the whole of the trade with foreigners in Silk or its products is under the Control of the Ki-ito Aratame Kaisha.

There are some other features in connection with the actual working of this Association, which do not appear in these Rules, instead of a but whether any supplement to them has been published or not, we cannot say. We have gleaned the following information from various quarters, and believing it to be substantially correct, now place it before our readers.

The Yokohama Kaisha was formed some time towards the end of last year by some thirty-three native merchants, some of them not previously interested in the Silk Trade. The Government Document we publish to-day appears to have formed the species of charter under which they were incorporated.

Each of these men furnished a subscription of one thousand *riyos*, and five hundred from each has been called up since. There is something to shew for this 50,000 *riyos* capital in the substantial block of buildings erected by the Association for their Offices, at the end of the Benten Dori near the Railway station.

To these Offices come all the Raw-silk, Silk Waste, Silk-worm's Eggs, &c., intended for sale in Yokohama. Here every parcel is examined by the staff of inspectors—one of whom is a foreigner—and any goods not bearing the proper stamps are stopped. The inspector's duty is also to stop (under Rules X and XVII) any Silk badly or falsely prepared, and have it returned to the country. And delivery is given (except, we believe, as regards Silk-worms' Eggs) to none but members of the Association.

A printed slip detailing the arrivals at this office and to whom consigned, is published daily.

As to the fees levied here, it is said that they are as follows:—

For Raw Silk *riyos* 4 per picul.

For Silk-worms' Eggs 10 *riyos* per 1000 cards.

Adding thereto something for Noshi, Waste Silk &c., we should calculate that this would give an annual Revenue of at least 70,000 *riyos*.

Now what be comes of this Revenue? *Riyos* 22,000, it is said, goes to the Machigaisho for the maintenance of Roads, Bridges, &c., the Machigaisho having made over to the Kiito Kaisho its privilege of collecting the *octroi* on Silk, Silk-worms' Eggs &c., for this fixed sum. (When however the Machigaisho collected this due, it took only about 3/10 per cent.)

Then there are the salaries of the staff of inspectors and bantos to pay, and these with sundries may run into another 8,000 or 10,000 *riyos*. There remains a surplus of say 40,000 *riyos*;—and all we can say is that if the thirty-three members divide it amongst themselves, they get a pretty little return for their original subscription of 1500 *riyos*. We do not wonder, that, as is reported, they are very jealous about admitting any new member: nor yet that others are fired with emulation, and want a Kaisha in the Import trade!

Well then, here we have thirty-three men who have the whole of the trade with foreigners in Raw Silk and its products in their grasp. Their powers it would seem are even greater than their rules would shew; for already on two occasions they have issued edicts changing the customs of transacting business with foreigners, and have even placed a ban on a foreign house daring to resist them:—while they do not hesitate to threaten with fines those of their own number who are disobedient.

It would be a curious thing to learn by what connection with the Government they have the power of doing such things.

Moreover these thirty-three men monopolize to themselves the brokerage of the whole of the Silk sold in Yokohama.

And not only is the trade in Yokohama thus in the grasp of the Kaisha, but every producer throughout the country is under the control of the minor local associations, and how far this control is likely to have rather a discouraging than a stimulating tendency, it is not difficult to guess.

The objectionable features in the whole system have become so apparent as we have proceeded that we have little more to notice. *Imprimis*, of course, we hold that Government interference of this character with any branch of industry is sure in the end to do harm rather than good, and when the effect of such interference is to place power of this nature in the hands of an organization extending through the whole of the silk-producing districts, it is doubly to be deplored.

Already among the first fruits we see fresh imposts placed on the traffic in silk, and these of course must mainly come out of the pocket of the producer. And who shall tell what annoyances the unfortunate producer may not have to submit to at the hands of rustic petty officialdom? We tremble to see a noble industry like this in the grip of a Japanese guild. But we know that the Japanese Government must be dealt tenderly with on such a point, for many reasons. Doubtless it has meant well, but it has yet to learn that healthy exercise and freedom develop a manly frame much better than a strait jacket.

The new paper tare is admitted to be a great boon, and

we doubt not that the native owners of silk have as much reason to be satisfied with the change as foreign buyers.

But as for the qualitative examination all Silk buyers tell us it is a failure. As much rubbish has found its way on to the Yokohama market for sale this season as before, and moreover we hear great complaints that the skeins suffer by the handling at the examining-house.

If the allegations of the Chamber of Commerce in its letter to the Ministers which we recently published can be definitively proved—and it seems to us that there is a great deal of awkward evidence in the documents and facts upon which we have just been commenting, while probably the Chamber has been able to collect still more direct testimony in the same direction—we do not see how the Ki-ito Aratame Kaisha in its present form and with its present powers is to stand a day longer if treaty obligations are to be faithfully carried out.

#### ASSAULT ON A RAILWAY OFFICIAL.

WE apprehend such untoward consequences from the decision given by the ACTING-ASSISTANT-JUDGE in a case brought before him on the 22nd instant, that we should be ill-discharging our duty were we to allow it to pass unnoticed.

The case arose out of an assault committed upon a Japanese railway official by T. A. SINGLETON who was a traveller by the 6 o'clock down-train from Yedo on the 16th instant. A report of the case, the accuracy of which we have taken some pains to ensure, will be found elsewhere in our column, and some little light has been thrown on it by certain particulars which we have obtained from the Railway authorities and to which we shall presently refer.

Evidence against the accused was adduced with a view of proving that he had travelled in a first-class carriage with a second-class ticket, and refused to pay the difference on arriving at the terminus although he had promised to do so; that he was there and therefore intercepted in his attempt to leave the terminus, and thereupon struck the complainant.

On the side of the accused it was pleaded that not having been able to find room in a second-class carriage the guard showed him into a first; that on the arrival of the train at the terminus the plaintiff appeared to complain to the station-master who asked him [accused] whether he had promised to pay the difference, to which he replied in the negative. He was then detained for some time in spite of the proffer of his card and address. This evidence was largely corroborated by that of his partner, S. COCKING, who stated that the card had been refused four or five times and that the complainant had finally taken accused by the collar, a proceeding which naturally led to the assault.

The complainant's evidence was unsupported by positive testimony except as regards the assault, which was admitted from the first; while, as we have said, the evidence of the accused was more or less substantiated by the depositions of his partner. In spite of all this, however, there is considerable difficulty in ascertaining with confidence where the truth lay, nor do the particulars of the accommodation afforded by the train and the number of passengers who travelled by it, with which at our request we were furnished the Railway Authorities, help us much. But they show that there was second-class accommodation in the train for *forty-eight* persons, while there were *forty-seven* second-class tickets issued. On the side of the Railway it may be urged from this fact that there were still two unoccupied seats; but the obvious and

weighty reply to this is that when carriages are so nearly full they may easily be pronounced quite full, especially in the dusk of the evening when very rigid examination is more difficult than by broad day-light.

Under all these circumstances and this nicely balanced evidence, we could quite have understood the dismissal of the case. But we wholly fail to understand the judgment, which fined the accused fifty cents for the assault, and imposed payment of the costs on the plaintiff. It seems to us that this is the rather in the nature of an arbitration between two contending parties, than of a strict administration of the law, which is the real business of a Judge. In a matter of this kind one of the parties must have been legally in the right, the other legally in the wrong, and it was, we venture to think, the Judge's business to determine this or dismiss the case as indeterminable. However much thought or pains or ponderation of evidence this little case may have involved, we hold that there were only two courses open; to condemn the accused or dismiss the case. If the evidence had gone to prove SINGLETON guilty, we should have been pleased to see him fined fifty dollars or sent to prison for ten days. But he was fined fifty cents. What for? If he was guilty of an assault, the severe punishment we only just named would not have been a whit too severe. There is nothing which the law should deal more severely with than assaults on men engaged in the discharge of their duties. On the other hand the plaintiff had to pay the costs. Why? The assault was proved. If justifiable on the ground that the accused was acting in self-defence, why was he fined? If he was fined for the assault why had the plaintiff to pay the costs? It is a thousand times more important that we should have law, than that we should have what any individual Judge may consider justice. In the former case he may often be wrong: in the latter he is certain to be constantly wrong, and meanwhile no one knows where he stands.

In regard to the accused, whether legally right or wrong, his proceedings betrayed a want of proper consideration for the Japanese. His obvious course was to pay the difference demanded of him under protest, leave his name and address with the Station Master, and apply to the Director of Railways or to his Consul for redress. This would have obviated delay, and the chance of any such act as that for which he was summoned and which *a priori* tells and should tell against him. There is a strong tendency in the minds of Western men, and we fear specially in Englishmen, to ride rough-shod over Asiatics, and this needs constant repression. Of course, if a Japanese puts his hand on a European who imagines himself in the right, or who, even if consciously in the wrong, tenders his card, he must take the consequences, which may easily be serious; for the law regards any such act as an assault and our feelings identify it with an insult. But a generous and humane consideration for the difficulties under which the Japanese must necessarily labour in applying European-made laws to ourselves should dictate a different line of conduct to that pursued by the accused in this case. We shall not deny that if, as seems to have been established, he tendered his card several times, and was not only detained but laid hands on, he was greatly provoked, wholly apart from any question as to where the original right or wrong may have lain. But we say that as a question of conduct he ought never to have placed himself in such a position, and therefore our sympathies are with the Japanese in the case. They could hardly be expected to know how to proceed in such a matter; he ought to have known per-

fectly well; and he should have been generous enough to make due allowances for the as yet novel position in which a Japanese railway guard must necessarily find himself.

We much fear that the judgment will largely and inevitably increase the difficulties of the railway officials, will paralyse them in dealing with cases to which they cannot as yet have become familiarised, and however unjustly—for Mr. HANNEN has always shewn a spirit of scrupulous justice towards them—will incline them to think that Englishmen find protection where they ought to meet with punishment. We cannot, of course, bend our law to suit Japanese conceptions of it, whether these conceptions are right or wrong. But the Japanese will assuredly fail, as we have, to understand the decision under review, and will infer from it much which it may be unjust to us to infer, but which it is most undesirable that they should have the smallest ground for inferring.

#### RULES OF THE RAW-SILK INSPECTING ASSOCIATION.

Raw-silk being the chief production of Japan, and the source of great profits in trade, everyone ought to bestow the greatest attention and industry, so as to manufacture a fine article. But of late years, owing to the extension of commerce, and the large quantity exported, a coarse and inferior article has been produced, and its value has gone gradually down, so that it has at last lost its high reputation, and the silk-men have many of them been ruined. This is a very lamentable state of things.

For these reasons an Association has been formed to devise plans to remedy this evil by encouraging the best modes of production in the Silk-cultivating districts, and examining the quality at the open ports. In this way they hope to prevent this evil in future, to bring back both the manner of production and of sale to an honest standard, and to promote the general advantage of the whole country.

The Association have therefore, after coming to an understanding with the representatives of the Silk-merchants of all parts, adopted the following rules:—

##### RULE I.

The Local Raw-silk Examining Companies will distribute to the Silk-cultivators all the paper-ties furnished by the Finance Department for Silk, for exportation and for home consumption. The cultivator stamps on the paper-tie, the name of his province and of his place of residence. Whether made up in the fashions styled *Sage*, *Mage*, *Nagate* or in any other, each hank must have a tie attached. No transactions will be made in any Silk which does not bear the owner's stamp.

When the silk is examined the Association will attach its stamp as proof of its having been inspected.

##### RULE II.

The Raw-silk Associations at the open ports in examining Silk will accept as proof, the seal on the ties of the Local Raw-silk Associations.

##### RULE III.

The Local Associations will pay in before hand to the Local Government Office, the regulation price of the ties, which will be afterwards recovered from the Silk-cultivators.

##### RULE IV.

The Government having prohibited transactions in Silk which is not tied with the official ties, not only will the members of the Association not trade in such Silk, but if any one offends against the prohibition they will seize the goods and lodge an information with the Local authorities.

##### RULE V.

The wholesale firms connected with the hitherto existing Association at the open ports and the provincial dealers will (or shall) equally form part of the Association.

##### RULE VI.

Goods for export which are forwarded to an open port

by the Provincial Associations must be sent to the open port branch of the Association, or to one of the firms associated with it.

#### RULE VII.

If any one after having bound himself by the obligations of the previous sections belonging to an open port branch of the Association or any firm connected with it deals in Silk which has not the stamp of the Local Association, or assists in doing so by forwarding Bills of Exchange, &c., the Association will impose a suitable fine.

#### RULE VIII.

If, on the other hand, a member of a Local branch forwards goods to a merchant unconnected with the branch at the open port, so that they do not pass through the hands of the open port branch or of one of the firms connected with it the Local Association will impose a suitable fine.

#### RULE IX.

Silk for exportation must previously be inspected by the Associations at the open ports. If, after inspection, a bargain cannot be concluded, the owner is at liberty to send it back for internal consumption, and in such a case half the fee for inspection will be returned.

#### RULE X.

If it should appear on inspection that Silk which has been examined has been made up in a tangled or otherwise improper manner, the open port branch will communicate with the branch at the place of production, and after the matter has been examined into a suitable fine will be imposed, and the Local branch will also fine the Silk-cultivator.

#### RULE XI.

The Market rates of articles of trade being subject to fluctuations, promptness or delay in export often occasions great delay or loss and for this reason the associations at the open ports will by employing men experienced in all the details of inspection and in other ways use their best endeavours to meet the convenience of the owner.

#### RULE XII.

Of late the use of a machine called "*Futatsudori*" has become prevalent. It is at first sight convenient as the operator can reel off two threads at once, but still it is often impossible to attend properly to both. Even when the reeling is commenced with five cocoons and the number dwindles to three or even two, the winder goes on reeling, and the thread is of course uneven. Not only so, but when it is wound on the large reel it is constantly breaking, and as it is too much trouble to be always tying the broken ends, they are simply joined together, so that it becomes impossible to find the real end and therefore great difficulty is caused in winding. This is no doubt the fault of the winder, but still it must be attributed to the deficiencies of the machinery. From this time forward the "*Futatsudori*" must be abolished, and the old single machine returned to. When the thread is being transferred to the large reel the end should be carefully tied, so that no knots may be seen, and the ends cut off with scissors.

Again there is a practice called "*Jikidori*" which consists in reeling directly from the pan containing the cocoons upon the large reel. This seems a convenient practice, but the hot water glues the Silk together and makes it impossible to rewind it, so that this plan must also be abandoned. In winding the Silk for the first time the water should be frequently changed and wound from first to last without unevenness of any kind. The water should then be dried off it and in wet weather especially it should be dried over the fire, so as to prevent its becoming tangled.

Those who have hitherto practised hand reeling are at liberty to continue to do so.

#### RULE XIII.

When the cocoons are given out to be reeled the Silk must bear a stamp with the manufacturer's name.

#### RULE XIV.

Wheat, flour, paste, or other weighty materials must not be used in fastening the ties. Rice paste should be employed and the breadth covered with paste should not exceed a tenth of an inch.

#### RULE XV.

The ties of the Skeins should not be heavier than six *momé* per hundred.

#### RULE XVI.

The Silk ties of Silk made up in the fashions called *nagaté* and *sagé* are to consist of red or light yellow Silk only.

As it is difficult to wrap the paper with the Government stamp round Silk which is not made up in bundles, such Silk should be prepared for market slightly made into bundles.

#### RULE XVII.

Any person who is guilty of placing good Silk outside, and *tamamayu* or other inferior Silk inside, or reels two threads at a time instead of one from the small reels to the large, or otherwise infringes the above Rules for manufacturing Silk, will have his goods returned on his hands and must not only refund the price paid for them, will be subjected to a suitable fine.

#### RULE XVIII.

On each package of pierced cocoons. Silk-waste, *yama-mai*, etc. the paper stamp ordained in the Government regulations must be affixed, and a wooden label attached with the maker's name, province and residence stamped on it. They are then to be submitted for inspection to the local examining Association.

#### RULE XIX.

Fees charged by open ports Silk inspecting Associations.

(Here are specified the different varieties of Silk.)

One half per cent will be charged upon the above articles estimated on their value at the time of inspection. But in proportion to the yield the quantity forwarded to the open ports will vary from year to year, and as it is also impossible to ascertain beforehand the expenses of building offices etc., a trial will be made of the above rate, but it may be modified as circumstances render necessary.

#### RULE XX.

The local examining branches will be guided by the above rule. Of course the fees are intended to cover the expenses of the examining office. They have been reduced as far as possible, and as an experiment have been fixed 3/10ths per cent, but they may be afterwards increased or diminished.

#### RULE XXI.

A complete account of all the expenditure will be submitted for the inspection of the local Authorities not later than December of each year.

The above Rules have been decided upon.

Raw-Silk inspecting Association.

January 1873.

The foregoing Rules for the formation of an Association are hereby sanctioned. Any alterations or additions which may be hereafter made in them must in every case be submitted for approval.

(Signed) MUTSU MUNEMITSU,  
Chief Commissioner of Revenue.

January 12, 1873.

### RULES FOR REGULATING THE PRODUCTION OF RAW SILK.

January, 1873.

Raw Silk is one of the first staples of this country, but of late its preparation has become careless and its quality has consequently deteriorated. Moreover, it is reported that fraudulent acts are not uncommon. This is a reprehensible thing. The annexed rules have now been enacted for its protection, and the local authorities in all parts of the country shall therefore devote special attention to the matter, and take measures to ensure the comprehension of the August Intentions by those who follow this trade, and to prevent fraud or careless manufacture.

(Signed) THE GOVERNMENT.

### RULES FOR REGULATING THE PRODUCTION OF RAW SILK.

#### I.

This Department will issue to the local authorities the stamps which are to be used on the knots of all silk, whether for foreign export or domestic consumption without difference, and the local authorities shall apply to receive them as often as necessary according to the estimated production.

*Note.* As the arrangement spoken of above will be carried out from June, 1873 application must be made so that the tie-stamps may be received before the date fixed.

## II.

The local authorities shall sell the stamps to the Silk-Inspection Guilds (*Kiito Aratame Kaisha*) and the Guilds shall sell them to the silk producers.

## III.

The silk producers shall purchase the above stamps, shall impress thereon a stamp containing their names, their provinces and the localities in which they reside, and shall tie each hank of raw silk or the centre tie according to the sketch.

*Note.*—The producer's stamp must also be attached to the knot.

## IV.

The local authorities shall sell the tie-stamps to the Guilds at a fixed rate, obtain payment therefor at once, and pay in to the taxation-bureau on each occasion.

Ten per cent on the amount sold (that is 10 *yen* per 100 *yen*) shall be allowed to the Guilds as commission for disposing of them.

## V.

When the Guilds dispose of the stamps to the producers of silk they shall not take more than the fixed price.

## VI.

The local authorities shall in the month of February of each year send in to the Taxation Bureau a statement showing the quantity of tie-stamps received by them, the sums paid in on accounts of sales made and the amounts of the Commissions allowed to the Guilds during the previous year.

## VII.

The price of tie-stamps shall be as follows:—

The centre-tie stamps for gun-shaped, *shimada*-shaped, etc., shall be 5 *sen* per 100.

Stamps used for bundles (*Sage-dzukuri*) or small hanks.

3½ *sen* per 100.

Stamps used for Cocoons.

5 *sen* each.

Stamps used for silk-wadding.

10 *sen* each.

## VIII.

In producing Silk care must be taken. It must be got up without dirt or breaks. There must be committed no fraudulent acts.

## IX.

*Tamaito* (Dupion) *Noshiito* (coarse silk).—(*Frison fils.*)

*Kuzuito* (Gum-waste) *Kawamuki* (skin silk) and other kinds being all styled raw silk, the stamps are to be affixed as if they were the same.

## X.

A stamp is to be affixed on each bale of Cocoons, Silk wadding, pierced cocoons and wild cocoons, etc., and the name, province, and locality of the producer, to be clearly marked thereon.

*Note.*—This is unnecessary in the case of such articles as cannot be made up into bales.

Cocoons. Pierced cocoons—wild cocoons, are to be made up into bales not exceeding 7000 *me* (=43½ catties) and a stamp to be attached thereto. Even if the bales do not come up to this weight the stamp is to be attached all the same.

Silk wadding. One bale to be not more than 9000 *me* (=56½ catties) and a stamp must be affixed as in the previous cases.

## XI.

The same rules as to the use of the tie-stamps must be observed with respect to the silk produced at the filature at Tomioka in Jōshin, but the stamps will be issued direct to the officials of the filature by this Department.

## XII.

Raw Silk, Cocoons, Silk-wadding &c. which after June 1, 1873 have no stamps and are dealt in surreptitiously shall be confiscated, and a fine of five per cent on the value shall be levied on the producer and purchaser.

The above is enacted.

January 1873.

(Signed) TREASURY.

## THE SWORD OF JAPAN; ITS HISTORY AND TRADITIONS.

By THOMAS H. R. McCLATCHIE, Esq.,

Read before the Asiatic Society of Japan,  
Wednesday, Nov. 26th, 1873.

There is, perhaps, no country in the world where the sword, that "Knightly weapon of all ages," has, in its time, received so much honour and renown as it has in Japan. Regarded, as it was, as being of Divine origin, dear to the General as the symbol of his authority, cherished by the *samurai* as almost a part of his own self, and considered by the common people as their protector against violence, what wonder that we should find it spoken of, in glowing terms, by Japanese writers as "the precious possession of lord and vassal from times older than the Divine period," or as "the living soul of the *samurai*?"

The sword has in Japan a history of its own, and has formed the subject of several treatises, written with the object of assisting the student of the art of fixing the date and maker's name of a blade, an art which apparently was a subject of great attention from olden times. Among these the principal works are the "*Kotō Meijin*," or "Collection of names of old swords," and the "*Shintō Bengi*," or "reference as to new swords." The former was compiled, in 1791 A.D. by Kamada Saburōdaiyu. The expression "old swords" is explained as applying to those made before the 8th year of the period Keichō, or 1603 A.D., while all those manufactured after the same date are included under the heading of "new sword."

Saburōdaiyu, in his preface to the "Reference as to New Swords," gives a short sketch of the Japanese legends regarding the history of the weapon; and though his allusions, in connection with his subject, to the mythology of his country may perhaps provoke a smile, still they are worthy of note as being the words of an author who is generally held to be a high authority on the matter of which he treats. The translation of this sketch reads as follows:—

"If we search out in by-gone days the origin of the sword, we find that our country excelled barbarian localities in regard to metal. In the olden times of the Divine period, when Izanagi and Izanami no Mikoto, standing upon the floating bridge of Heaven, thrust down their glittering blade and probed the blue ocean, the drops from its point congealed and hardened and became an island, after which the Deities created several other islands. These eventually became a large country composed of eight islands, and amongst the many names of this country—they styled it too the 'Land of many blades.' In its early days, there existed the Divine Swords Tō-nigiri and Ya-nigiri. Then, too, when Sosanoō no Mikoto smote the eight-clawed Great Dragon, and struck him on the tail, the sword of the Deity became slightly nicked, and from the inside of the tail he drew out a single blade. 'This,' said he, 'is a marvellous sword,' and he caused it to be presented to Tensho Daijin. This was styled the 'Sword of the Clustering Clouds of Heaven,' and also the 'Grass-mowing Sword.' Should not this be said to be the commencement of fixing the dates of swords? That 'Sword of the Clustering Clouds' was made one of the 'Three Divine precious things,' (i.e. the Seal, Sword and Mirror held by the Mikados),—it has had no equal in this country, and, being the gigantic weapon that watches over it, is a thing of great dread even to speak of. Now, when our country had arrived at the Heavenly rule of Sūjin Tennō, the 10th of the mortal Emperors, he feared to dwell in the same palace with the 'Divine precious things,' and so he caused a person called Amakuni, a man of the department of Uda in the province of Yamato, a far-removed descendant of Me-hitotsu-gami, to forge in imitation of the sword, and as for the 'Clustering clouds' that had descended from the Divine age, he was pleased to offer it up to the shrine of Tensho Daijin. Under the Heavenly rule of Keikō Tennō, Yamato Také no Mikoto, at the time of his expedition against the East, went to pay reverence at the shrines of Isé. His aunt, Yamato Himé no Mikoto, was the resident of the Shrine at that period, and she besought that the Divine sword of the 'Clustering Clouds'

"might be handed down to him from the Shrine, and so gave it over to Yamato Také no Mikoto, together with a tinder-case attached. This is said to have been the origin of the custom of fastening a charm-case to a sword as a guardian for children. Yamato Také no Mikoto, having accomplished the subjugation of the East, offered up the sword at Atsuta in the province of Owari. Up to the present day, the virtue of this sword, permanent and immutable even unto the end of myriads of ages, is the guardian of our country and our homes, and the protector of our own selves. In no way can it be fully described by the pen! The second "precious sword" was buried in the Western seas at the time of the death of Antoku Tennô (1185 A.D.)."

Throughout the whole of the above passage, the word 'sword' is invariably rendered by the Japanese word '*ken*,' which signifies a long, straight, double edged sword, as opposed to the '*katana*,' of modern times, which has but a single edge, and is slightly curved towards the point. The '*ken*' is the oldest form, and the '*katana*' the newest, while between the two comes a sword much like the '*katana*,' only a great deal more curved. A beautiful specimen of a '*ken*' is now in the possession of the most noted fencing master of Yedo. It is about three feet in length, and perfectly straight; the blade is some two and a-half inches in breadth, and the point somewhat heart-shaped. It is exceedingly heavy, double-edged, and engraved with various devices. This '*ken*' is said to be between seven and eight hundred years old. The curved sword was worn swinging from a belt, to which it was attached by two strips of leather; it appears to have been a common style of war-sword, and was generally very short. The shape of the '*katana*' was obtained by dividing the heavy '*ken*' down the centre of the blade, thus producing two single-edged swords of more convenient weight. Besides these again, there is the '*wakizashi*,' or short dirk, the custom of wearing which together with the '*katana*,' as a sign of gentle birth is said to have been introduced about the commencement of the Ashikaga dynasty, in the early part of the 14th century. The length of this dirk has of late years been gradually lessened to about nine and a-half inches. This is the weapon with which the ceremony of *hara-kiri* was performed, the dirk being then presented to the principal on a small square tray made of white wood, such as is used in temples. Hence the allusion, in a popular song written at the time of the recent Revolution,—“The gift I wish to present to my lord of Aidzu is ‘nine and a-half inches’ on a temple tray,”—meaning that the author of the song, who was evidently attached to the loyal party, desired nothing better than the death of the nobleman in question.

The names of noted smiths are many in number. The first who appears to be a really authentic personage is one Amakuni, who lived during the reign of the 42nd Emperor Mommu Tennô (about 696—707 A.D.). He is stated to have been a man of Uda in Yamato, and this circumstance, coupled with the fact of similarity of name, induces the belief that he was a remote descendant of that Amakuni whose name has been mentioned above as having made a sword in imitation of the Divine blade called "Clustering Clouds." There are various tales of other clever smiths before the time of Mommu Tennô, but it is hard to place much reliance on these legends. With regard to later times, the "Reference as to new swords" says, "The good makers of olden days were Kamigé, Shinsoku, and Amaza,—and of the middle ages, Muné-chika, Yasutsuna, Sanémori, Yukihiro, and Yoshimitsu, with Kuniyoshi of Awataguchi (in Kiyôto). There were many Bizen men of old,—in the period Shôkiu (1217-1220 A.D.) there were numerous artisans,—and subsequently came Masamuné and Yoshihiro, who were "universally renowned." Of the above names, Yoshimitsu is placed by the author of the work as first in point of merit.

It appears rather strange that in this list there should not be found the name of Muramasa, who is certainly one of the most widely known smiths of Japan; it is most probable that his name was omitted by some oversight, as he is mentioned elsewhere in the book. The four makers of swords who seem to be best known in Japan are Muné-chika, Masamuné, Yoshimitsu, and Muramasa. Of these

Munéchika is by far the oldest; he was born in 938 A.D., and his swords were famous from 987 A.D. downwards. Masamune and Yoshimitsu acquired their renown towards the end of the 13th century, while Muramasa did not appear till nearly a century after them. These makers, as indeed all smiths of any note, had their own marks which they engraved on the hilt of the sword, most frequently accompanied by a date, but as, of late years, the practice of counterfeiting the marks of well known makers has been largely indulged in, these are not always to be depended upon. Muramasa was succeeded by his son, and his grandson, who both bore the same name, and the latter of whom flourished in the early part of the 15th century. The blades turned out by this family acquired the unenviable reputation of being unlucky and of frequently bringing their owners into trouble. Mr. Mitford, in his "Tales of Old Japan," narrates the legend as to the reason why the Yoshimitsu blades were deemed of good omen in the Tokugawa family, while those of Muramasa were thought unlucky.

The profession of the smith was deemed an honourable one, and those who engaged in it were generally men of good family. It is mentioned of the Emperor Gotoba Tennô, who succeeded to the throne in 1184, that not only did he "give directions to the noted smiths of the various provinces and make them forge, but also worked with his own hand." In later years the famous smiths received from the Court an honorary rank, which was in proportion to the renown they had gained. Thus it is a common thing to see engraved on a sword the name of the maker, with the title "*hami* of such and such a province" appended. This, however, is also explained by the assertion that the maker engraved on his work the title of the nobleman in whose jurisdiction he lived; but of the two explanations the first-named is apparently more worthy of credit. To these names a date is generally added, while on the other side of the hilt is occasionally written a motto or a verse of poetry, some of which are rather curious. Subjoined are a few of these, selected at random:—

"There's nought 'twixt Heaven and Earth that man need fear, who carries at his belt this single blade:—again,—“One's fate is in the hands of Heaven, but a skilful fighter does not meet with death:”—and again,—“In one's last days, one's sword becomes the wealth of one's posterity.”

Apart from these mottoes, it was a common custom to give names to famous swords. 'Little Crow' was the title of one in great repute in the Taira family, while in the house of Minamoto there were two hereditary swords named "*Higékiri*" and "*Hizamaru*." The two latter names arose from the circumstances that when these swords were tried on two criminals sentenced to decapitation, one cut through the beard of the victim after severing the head from the body, while the other also divided the knee. The historian Rai Sanyô narrates the fact that the forging of these two swords occupied the smith for a period of sixty days. The dirk with which Asano Takumi no Kami, the lord of the famous "forty-seven rônins," committed *harakiri*, is still preserved at the temple of Sengaknji in Yedo, while swords alleged to have belonged to Minamoto no Yoritomo and to Taiko Hidéyoshi are to this day shown at the temple of Hachiman at Kamakura.

It was the writer's good fortune, in the spring of the present year, to pay a visit to the famous shrines of Nikko, in the province of Shimotsuké. The highest mountain of that cluster of hills is called Nantai-san, and has been considered for many ages a sacred place. Upon this mountain are several small *torii*, or gateways, such as are seen leading up to Japanese temples, and these guide the traveller to a small shrine at the summit. Here, on a bare rock overhanging a steep precipice some sixty or seventy feet in depth, lay, half-buried in the snow, a large number of sword-blades, old and rusted, which had evidently lain there exposed to the wind and rain for many years back. Tradition says that, in old days, any one who had committed a deed of blood with any weapon, was accustomed to make a pilgrimage to this mountain, and there fling away the instrument as a sort of expiation for his crime. The guides on the spot, however, stated that though this was doubtless true in many cases, still it was not an absolute

fact. Among the sword-blades there lay one, broken into three pieces, but which when whole must have been not less than eight feet in length. This sword bore a date of some twenty-one years back, and the maker's name, Iza-wa Gijirô, who turned out to be a smith late of renown in the castle-town of Utsunomiya, some few miles off. Many a tale of blood, no doubt, could those old blades have told, had they a voice; but there they lay, as still as the hands that once wielded them, fitting emblems of the decay, in these days, of that once deep-rooted pride which was wont to cherish the sword, under the belief that it was the source of manly spirit, and the very fountain of honour.

The different way of carrying the sword are stated by some Japanese to have been indicative of the rank of the wearer. Thus, persons of high birth are said to have generally worn it with the hilt pointing straight upwards, almost parallel with the body; the common people to have struck it horizontally in the belt; while ordinary *samurai* wore it in a position about half-way between the two just quoted. This, however, does not appear to be an idea worthy of much credence, for all visitors to Yedo some three years ago must have noticed that the style of carrying it first quoted above was one that found great favour in the eyes of the low-class swashbucklers of the Capital, who frequently were seen swaggering about girt with weapons placed perpendicularly in their belts and reaching almost from the level of their chins to their ankles. To clash the sheath of one's sword against that belonging to another person was held to be a grave breach of etiquette,—to turn the sheath in the belt, as though about to draw, was tantamount to a challenge,—while to lay one's weapon on the floor of a room, and to kick the guard with the foot, in the direction of any one else, was a deadly insult that generally resulted in a combat to the death. It was not even thought polite to draw a sword from its sheath without begging the permission of any other persons present.

The decay of the practice of wearing swords is certainly a hopeful sign of more intelligent and orderly times. The contrast between the present peaceful condition of the great cities of Japan, and that of the same places a few years back, is in itself a sufficient argument that the swords were not really needed, but were, on the contrary, incentives to violence. Tales of unfortunate dogs serving as a test for the sword of the roystering student,—or of some wretched foot passenger losing his life beneath the stroke of a ruffin anxious to try the edge of his blade by what is so expressively styled in Japanese "crossroad cutting," are happily now unknown. That these tales were, even in former times, much exaggerated is more than likely, but that such things did actually occur is beyond all doubt, and it is gratifying to find the Japanese themselves so far awakened to a sense of the uselessness of their once dearly cherished swords as actually to ridicule, in the public press, the few who still adhere to the old custom. Honesty of purpose and firmness in action,—straight-forward dealing and steadfast endeavour, will do far more to help on this country to her proper place among the nations of the world, than could ever have been achieved by means of her formerly much-prized possession, the "girded sword of Great Japan."

THOMAS R. H. McCLATCHIE.

Hiogo, October 14th, 1873.

#### ROYAL MARINE LT. INFANTRY ATHLETIC SPORTS.

We append the results of the contests for the different prizes for skill and speed which were held yesterday at the Camp Ground. There was a large assemblage of visitors, including the Officers and Men of the French Company stationed here, and a most favourable impression was made by the spirit and vivacity with which the games were conducted.

1.—COMPANY RACES, 100 YARDS. The first two in each race to compete in Champion 100 yards race.

No. 1 Company	1st Prize, \$2 ; 2nd Prize, 50 cents.
No. 2     "     1st     "	\$2 ; 2nd     "     50     "
No. 3     "     1st     "	\$2 ; 2nd     "     50     "
No. 4     "     1st     "	\$2 ; 2nd     "     50     "

#### No. 1 COMPANY.

Sergeant Batchelor .....	1
Private Dodwell .....	2

#### No. 2 COMPANY.

Sergeant Gardiner .....	1
Private Coombs .....	2

#### No. 3 COMPANY.

Private Tarring .....	1
Sergeant Collins .....	2

#### No. 4 COMPANY.

Corporal Brown .....	1

„ Bennett.....	3

A betto's race and a boy's race brought the sports to a close.

#### NOTIFICATION.

The undersigned publishes for the information of H. B. M.'s subjects the annexed note which he has received from His Excellency the Japanese Minister for Foreign Affairs, enclosing a notification under which the exportation of Flour made from Rice, Wheat and Barley, is henceforward permitted free of duty.

(Signed) HARRY S. PARKES,  
H. B. M.'s Envoy Extraordinary  
and Minister Plenipotentiary.

H. B. M.'s LEGATION,  
Yedo, November 27th, 1873.

#### [TRANSLATION.]

November 24th, 1873.

SIR,—With reference to the permission granted some time ago to export rice, wheat and barley, I have the honour to inform you that it is now permitted also to export flour made from the same as you will see by the enclosed copy of Notification No. 385.

With respect,

(Signed) TERASHIMA MUNENORI,  
Minister for Foreign Affairs.

H. E.

SIR HARRY S. PARKES,  
H. B. M.'s Envoy Extraordinary and  
Minister Plenipotentiary.

#### [ENCLOSURE.]

Notification No. 385.

With reference to Notification No. 246, of July last permitting the export of rice, wheat, and barley, it is hereby notified that the export of flour made therefrom is likewise permitted free of duty.

If circumstances render it desirable to change this notification, public notice of the same will be given two months previously.

(Signed) IWAKURA TOMOMI,  
Udaijin.

17th November, 1873.

##### THE SAGHALIEN QUESTION.

##### POSITION OCCUPIED BY THE UNITED STATES.

TO THE EDITOR OF THE *Japan Weekly Mail*.

SIR,—The *London and China Express* of October 3rd, contains a statement to the effect that a quarrel is "considered imminent between Russia and Japan," upon the old question of the occupation of Saghalien. New York journals of the same date publish a telegram from London declaring that "special despatches from St. Petersburg report that a rupture has occurred," &c., &c.

While nobody is likely to be disturbed, on the strength of these or similar warnings, by the prospect of present disturbances between the two countries, there is no doubt that the question of the occupancy of Saghalien continues to be, as it has been for years, an extremely irritating one for the Japanese Government. The late Kuazoku, Sawa, was to have directed the greater part of his attention to the time-worn dispute, although it is not at all clear how his action or that of any Japanese representative could now retard the evident purpose of the Russians to extend their sway over every part of the island. Years may possibly pass before any definite settlement is attained, but as regards the various courses likely to be adopted by the Japanese in their diplomatic struggle, there is already a considerable deal of speculation, some of which, especially in the United States, is taking such positive forms as to warrant a word or two in exposure of its errors. A telegraphic message from Washington, which appeared on the 4th of November, in all the American journals, has been accepted as a sort of acknowledgment of responsibility on the part of the U. S. Government, and has led to various discussions, all of which seem generously directed and sincere. The circular is as follows:—

The complications which may arise between Japan and Russia as to the possession of the Island of Saghalien to the northward of the Japanese Empire must be one of some interest to the State Department, in view of the provisions of the treaty of amity and commerce between the United States and Japan, concluded at Yedo, 1858, and drawn by Townsend Harris. The second article of the treaty recites that the President of the United States, at the request of the Japanese Government, will act as a friendly mediator in such matters of difference as may arise between the Government of Japan and any European power.

I desire, with your permission, to show how little likelihood there is that the Japanese will ever again apply for the friendly counsel or action of the United States in the event of difficulties with any foreign power. When the treaty of 1858 was executed, the article in question—which is somewhat broader in scope than the above quotation implies—was introduced in good faith on both sides.

It was one of the many methods employed by Mr. Harris to secure especial advantages, and he undoubtedly obtained sufficient equivalents for his pledge. How long it was intended to continue in force,—whether its operation was to cover only a limited period or to last until the expiration of the treaty, is a point which has only recently been brought forward. It is certain that until a very few years ago the Japanese regarded it as an unbroken promise, and that the State Department at Washington admitted its validity by acting, more or less effectively, upon it. The manner of that action, however, was such as to dispel all expectation of the idea of any genuine or practical mediation. I believe that a few unimportant applications for friendly service were made in the time of Messrs. Pruyn and Van Valkenburg, and were acceded to; but the only earnest desire to secure intercession was expressed in 1870, through Mr. De Long, who gave it all the support that his personal influence could convey. It may be worth while to mention that the Japanese based their appeal upon the following grounds:—1, that the well known friendship then existing between Russia and the United States would cause an application by the latter to receive particular attention: 2, that the close proximity of the U. S. to the locality in dispute might be supposed to create an identity of interests, in some particulars, with the Japanese: and 3, that the provision of the treaty of 1858, abundantly authorized their request. The action of the United States authorities, in response, was as follows:—An informal message was sent to St. Petersburg, instructing the U. S. Minister to discuss the matter unofficially. This order was followed out, and with rather unexpected consequences. The Russian Foreign Office expressed a degree of satisfaction that the subject had been approached unofficially, inasmuch as a more direct application might have ruffled the pleasant surface of the cordial alliance of that period; that no serious consideration of the topic would be consented to, and that Russia could allow of no intervention in a question concerning only herself and her nearest Eastern neighbour. The whole tone of this communication, so far as the United States' Government was concerned, was, to say the least, disagreeable, and it is quite possible that it may have contributed to the acerbity which afterward revealed itself in the Catacazy affair. In regard to Japan, a new proposition was submitted. Although Russia would agree to no mediation on behalf of Japan, yet on her own behalf, she would be glad if the United States could discover by what means satisfactory to the Japanese she could obtain possession of the whole of the disputed territory. I believe that a virtual suggestion was offered that a sum of money should be paid. This proposal, quite as humiliating to the Japanese as the subsequent occupation of the southern part of the island, was actually transmitted, and there the mediation, if it can be called so, abruptly terminated. Without considering, or wishing to consider, to what extent the United States did or did not fulfil their presumed obligation, it is needless to say that the entire transaction was a bitter disappointment to the Japanese. I have a keen recollection of the light in which it was said to be regarded by them at the moment, but as time has probably softened or altered their feelings—they are occasionally susceptible to change—it is perhaps needless to revive that part of the matter. Unless, however, they are gifted with supernatural endowments of the sentiment which is supposed to spring eternal in the human breast, there is no reasonable probability that they will again confide themselves to the intermediary action of the United States.

I am, Sir,

Your obedient Servant,

E. H. HOUSE.

Yokohama, November 24th 1873.

#### ASIATIC SOCIETY OF JAPAN.

A Regular Meeting of the Society was held on Wednesday, 26th November, in Room No. 19 at the Grand Hotel. The Rev. Dr. Brown, V.P., took the Chair at 8.30 p.m.

The minutes of the previous Meeting were read and approved and the names of the following gentlemen announced as new Members:—Messrs. M. Von Brandt, T. Walsh, H. Wilkinson, G. Wauchope, J. Stransome, W. C. Ayrton and the Rev. J. Summers.

On a motion, it was resolved that a Committee be appointed to revise the Constitution and By-Laws and report to the next Meeting of the Society.

The Chairman appointed on this Committee: Sir Harry S. Parkes, Messrs. Howell, Syle, Satow and R. B. Baker.

Also, on motion of Mr. Wilkin, seconded by Dr. Brown, it was resolved that visitors passing through Yokohama be invited to attend the Meetings of the Society.

A paper prepared by Mr. T. R. H. McClatchie of H. B. M. Legation, on "The Sword of Japan: its History and Traditions" was then read, in the absence of the writer, by Sir Harry S. Parkes.

The Chairman remarked upon the great amount of time and pains required for the preparation of such a paper as that just read, not to speak of the Japanese scholarship necessary to the translations included in it; and expressed the obligations of the Society for the contribution made by Mr. McClatchie to the interest of their Meetings.

Dr. Caldwell, R.M., testified to the deadly nature of the wounds made by Japanese swords, as shewn in cases which had occurred here only a few years since.

Lieut. Sandwith R. M. mentioned the case of a trial of skill between a Japanese and an Englishman, the weapons being a Japanese sword and a single-stick—the latter proving the most effective.

Mr. Howell considered the production of swords by some famous Sword cutlers, analogous to the making of celebrated musical instruments by certain Italian makers whose work has never been equalled. In both cases, their success was the result of patient and concentrated attention to all the particulars which contributed to the consummation. It is an interesting question whether or not we, with all the modern aids of chemistry and even electricity, can equal the steel of Japan.

Commander Nelson, U.S.N., thought that the Japanese sword-steel equalled our own and perhaps excelled it; though the sword, as a weapon, was faulty from its weight, from its requiring the use of both hands, and from its not being well balanced.

Captain Bridgford, R.M., said that the object of the weight was to cut through armour. He referred to the straight, pointed Greek and Roman sword as adapted to unarmoured combat; while the long, heavy Crusaders' sword was in strong contrast, being designed to cut through heavy mail etc. The rapier, on the contrary, was light and pointed. The Aztec sword resembled the Japanese, but it was over-matched by the lighter weapons of the Spanish invaders.

Sir Harry S. Parkes remarked that as old armour was very heavy and the new became lighter, so the weight of swords diminished. He exhibited a light Japanese dress-sword; and also a rusted blade brought from the mountain, NanTai, mentioned in the paper. He considered that in the days of old Japan the sword had been a symbol of tyranny rather than of defence. Of all the changes that had taken place during the last three years, he considered none greater or more significant than the disuse of sword-wearing. When the (so-called) Parliament first met, one of the 337 members suggested that it might be left optional for the *samurai* to wear their swords or not, but no seconder to the motion was found, and the mover himself was assassinated soon after. Now a foreigner can go about the streets of Yedo safely by day or night.

The Chairman in conclusion related an incident connected with a student from Niigata who, three years ago, would sooner part with his garments than his swords; but now, on returning home, left them without regret, "having no use for them."

## Law Report.

### H. B. M.'s PROVINCIAL COURT.

Before N. J. HANNEN, Esq., Acting Assistant Judge.

November 21st, 1873.

AYMONIN v. BUTTERFIELD & SWIRE.

This was an action arising out of the loss of a ram or piston of a hydraulic press, in the bay of Yokohama, in January last, sent to the order of the plaintiffs, and the subsequent alleged failure of defendants to replace the same according to the original specification.

The plaintiffs were Aymonin & Co., represented by J. P. A. Zembach, all of Yokohama, on the one part; and the defendants were Butterfield & Swire, represented by Mr. Dodds of Yokohama on the other part.

The plaintiffs conducted their own case; the defendants were represented by Mr. Dickens.

J. P. A. Zembach, sworn, said he was in the employ of Messrs. Aymonin & Co. Witness proceeded to read a statement, to the effect that in January last, Butterfield & Swire, as Agents of the Ocean Steamship Company, had shipped from Liverpool a hydraulic press, some nineteen pieces altogether, according to the Bill of Lading. [Document handed to Court.] On the arrival of the machine here, on board the *Achilles*, in January last, as it was being trashed for landing, owing to some defect in the tackle the case slipped, and the piston, one of the principal pieces fell out, and was lost in the sea. Butterfield & Swire, on being notified of the accident, had agreed to take upon themselves the responsibility of the loss, as he could prove on a reference to his papers. The piston since cast to replace the one lost, was not uniform, the former having had a sheeting of copper at the bottom, worth some \$250, which, he maintained, lessened the value of the piston substituted.

Mr. Dickens, expressed his willingness to admit that the ram would have been better, had it been sheeted with copper.

Witness, continuing, said that, in consequence of the non-existence of the copper covering, a clean Bill of Lading had been refused by the firm. Since October last, they had observed that there were defects in the casting itself, the water starting through the pores of the metal in bubbles. He could certify to this himself. In consequence, the necessary pressure could never be obtained. There was a loss of as much as 10 to 15 per cent. force. They had notified Messrs. Butterfield & Swire of the bad condition of the press. They had also requested them to reimburse them in the sum of \$350, calculated cost of a new ram with the necessary copper at bottom, but had received no reply to their letter. [Invoice of press handed into Court.] They had requested Butterfield & Swire to replace the ram this way to avoid litigation. The press was put up about the end of September last. The survey was made the month following, when the main pieces were mounted. From the survey made by Messrs. Whitfield & Dowson, it was found that the new ram would not descend low enough into the chamber, being some three centimetres too long. This was altered, but the other defects remained. He submitted that everything had been done by his firm that could be done in order to give the press a fair chance before commencing proceedings before His Honour. The bubbles were a consequence of the bad casting, and were discovered on the first day they had commenced to work the press, in October last, which was the earliest period they could commence after the drying of the cocoons. They had since received a note from Messrs. Whitfield & Dowson to the effect that the bad casting would be rectified free of charge. Not having received any answer from Messrs. Butterfield & Swire to their communication of October last, they could not entertain Whitfield & Dowson's letter. They had, in consequence commenced the present proceedings.

Cross examined by Mr. Dickens: He had himself seen the package in which the machine was brought here. The weight of the ram was about 16 cwt. There was nothing broken about the case. The tackle when it was being hoisted up, slipped a little, lowering one end of the case or package, and the ram in question immediately shot out, descending into the sea. There were hoops of iron round the body of the packing, but only partially round the ends. The water came out of the ram more like steam. He could not say how long it would take to fill a tea cup with it. [The letters were here put in by the defendant, one of them notifying Messrs. Butterfield & Swire that if satisfactory action was not taken in regard to the machine, legal proceedings would be taken. The letters now produced were all's.]

Mr. Dickens said the defence was a very simple one. They had already admitted their liability in regard to the ram, for which he submitted they were alone responsible. To this end he read the

law of the matter, citing a parallel case, showing what the duties of shipowners are in such matters as the one under consideration, and pointing out in conformity with the decision arrived at in the case just cited, the willingness of his clients to admit their liability for loss and interest on the missing piece, but not on the whole machine. They had only known that the case contained machinery, without knowing that there was anything absolutely necessary to the efficient working of the whole of it when put up. The nature of the claim of plaintiffs might be known by reference to a letter dated 20th August, 1873. This document showed that defendants had offered to pay the cost of the piece lost. To which plaintiffs had said that they could not state the amount. His clients had also offered to replace it. But plaintiffs had replied that they could not wait far one from England. Which was in effect, a refusal of defendants' offer. Counsel next produced a letter showing that plaintiffs had indicated their willingness to accept a new ram, cast by Messrs. Whitfield & Dowson; and, he submitted, such a one as could be produced in Yokohama. Nothing had been said about the sheeting of copper until some time after. After it had been delivered, the machine with the ram, had been allowed to remain idle some three months, in the possession of plaintiffs, before anything had been done with it.

The Court hereupon adjourned until half-past one o'clock.

Mr. Dickens, in pursuing his argument, said the action of plaintiffs, in this case, affected the question of costs. The plaintiffs, after accepting the piston in April, came forward and instituted the present action. The casting required had been made by Messrs. Whitfield & Dowson, in conformity with the remainder of the machine. He submitted that his clients had done all they could in the matter. Counsel here read the contract made between plaintiffs and Messrs. Whitfield & Dowson, in which it was notified that there might be faults on making the new casting, but that these would be effectually remedied. The piston had been cast and, as he had said before, accepted by the plaintiffs. Had they refused it, it was likely that the defendants would have sent out for another from England, and the affair arranged without loss to plaintiffs, considering when they had commenced to use the press. In addition, the principal witness of his clients had left the country, and they were now reduced to the correspondence. He therefore suggested that the Court would rebut the demands of plaintiffs. In August last, if they had wished it, plaintiffs could have obtained the cost or value of the ram, or a new one from England. This view of the matter, he thought, affected the question of costs.

Court said that, after the loss of the ram, the defendants had decidedly admitted their liability. In so far as costs were concerned, he would consider the point.

Counsel for defendants admitted that his clients had acknowledged their liability. It appeared to him, however that the real question was whether the piston was well and properly made. He considered that it had been cast, delivered, and accepted, as a good production; and he therefore submitted that his clients were in no way liable at the present moment; and that the case should be dismissed with costs. Nothing had been said in the contract as to possible contingencies.

Court said it appeared that the plaintiffs, from the tenor of the endorsement on the Bill of Lading, had refused to accept the ram until it had been found to be in proper working order.

G. Whitfield, sworn, cross-examined by Mr. Dickens. [Letter handed to witness]: He had written the document produced. Witness had seen the machine, taken the measurement and weight, and made out his estimate, as per letter. Had never seen a ram sheathed with copper, and did not consider it absolutely necessary. The new ram was in every respect the same as the old one, only it had no copper on it, of which, however, nothing was said at the time of its being constructed. The new ram was delivered about the beginning of February last. The plaintiffs had complained of the length and, latterly, of the casting. There were "blow holes" in it, but they had been allowed for in the contract and repaired since, some eight or ten of them. The exudation of the metal itself in water would fill up such holes. He had not seen the defects lately complained of. He had offered to remedy them; but his offer was not accepted by plaintiffs.

J. P. A. Zembach, said the piston, according to the contract with Messrs. Butterfield & Swire, was stipulated to be delivered in good order and condition, with the copper sheathing. Witness submitted that they had always allowed free action to Messrs. Butterfield and Swire in the matter; and, whether they had had a ram cast in Yokohama or had sent for one out from England, it was not for them to refuse the one presented before it had been tried. The delay in mounting the press had arisen in consequence of their not having yet removed to their new premises.

Court thought that, provided the interval was a reasonable one, there could be no objection to the delay; but that would depend. In considering the merits of the case, his Honour considered that, according to the contract, the plaintiffs had expected the piston to be replaced, whence, it did not much matter. According to same contract, they had evidently waived their right of having one sent out direct from England. The question was, therefore, whether it had been properly fulfilled. Of the copper sheathing nothing had been said in the agreement. In that matter the decision would be against the plaintiffs. As to the second point, whether the piston had been cast in proper order and condition the evidence adduced was in favour of plaintiffs. The decision would, therefore, be that the piston should be repaired to the satisfaction of some competent person agreeable to both parties, within a month from present date. No costs allowed.—*Herald*.

## IN H. B. M.'s COURT.

Before N. J. HANSEN, Esq., Acting-Assistant Judge.

Saturday 22nd, 1873.

T. A. Singleton was charged with assaulting a Railway official.

Defendant pleaded guilty to having committed the assault, but stated it was done under great provocation.

The plaintiff Metohing, an employé of the Railway Department of Public Works, stated:—The prisoner travelled first class he having a second class ticket, but said he would pay the difference in the fare on his arrival at Yokohama. After arrival at Yokohama I applied to the defendant for the amount one shilling and a half, when he refused to pay, and was going away without paying. I ran round to the front, and intercepted him. He struck me on the head, I did not return the blow.

To the defendant:—There were no others in the same first class department travelling with second class tickets. I collected the tickets in that compartment, and saw several other passengers get into the train after the defendant. The defendant did not refer the matter to the Station Master. On his arrival at Yokohama I went to the Station Master, who told me to get the money from defendant. The Station Master also explained to him that he must pay. The prisoner did not tender his card. There was much confusion at the time, and if he did so I returned it to him. I did not put my hands on the prisoner at the Station or outside.

Tanaka stated:—The plaintiff did not in any way put his hands on the defendant. I saw the latter strike the complainant.

The station master corroborated the evidence of the plaintiff; he did not see the defendant offer his card, neither did he speak to witness on the subject of dispute.

The defendant here stated that this was not the official he had understood to be the station master. Other witnesses corroborated plaintiff's evidence.

The defendant stated:—Having purchased a second class ticket, and finding all the carriages of that class full, I was shown by the plaintiff into a first class carriage. On the way to Yokohama the plaintiff applied for 1½ shillings being the difference of the fare, and on leaving the Station at Yokohama I was applied to for it again. I then declined to pay, but as the plaintiff and others obstructed my leaving, I tendered them my card, and requested them to summon me. Outside the station about half a dozen officials crowded round me, and after cautioning the plaintiff I gave him a blow on the head. I was then asked for my card, and this time it was accepted. I never promised to pay the difference of fare.

Samuel Cocking sworn, corroborated the defendant's statement, and said on alighting from the carriage at Yokohama, the plaintiff stood right in the way of defendant, and jostled him with his shoulder, the plaintiff stood in front of defendant and pressed him back with his flat hands; there was now quite a small crowd of railway officials. The defendant offered his card and witness advised him to offer it again. Witness saw the plaintiff take defendant by the collar to prevent his going out, when the prisoner struck the plaintiff.

To the Defendant.—Plaintiff refused your card after you offered it to him four or five times.

The Court remarked that the accused had had no right to strike the guard; such a thing might only be done in self-defence. It was of importance, however, that Japanese generally should be given to understand that when, in a civil case, the offender offered to give name and address, it was wrong to stop or detain him. In view, therefore, of the proved provocation, a nominal fine only would be inflicted for the assault, in the sum of fifty cents, plaintiff to pay costs. His Honour desired further that this view of the case should be explained to the station master in court.

## H. B. M.'s CONSULAR COURT, YEDO.

November 25th, 1873.

A British subject was this day brought up before H. B. M. Consul, Yedo, charged with having committed a nuisance from the platform of a 2nd Class Carriage on the Railway, on the 18th inst. As this was his first offence he was fined \$5 and \$2.50 costs.

## Extracts.

## THE CHANCES OF THE MONARCHY IN FRANCE.

The restoration in France is certainly a little more possible this week than it appeared last, but it is very little. The situation, by the latest previous accounts, was of this kind,—the Comte de Chambord, true to the pretensions he has maintained through life, had declined all concessions, had refused to change his flag, and had resolved to remain awaiting his summons as unconditioned King. The Orleanists, however, pressed for pledges, and Army refused to change the Tricolour, so that the Fusion had thus been rendered useless, there being no chance of a majority even in this Assembly capable of laying France at the feet of a despot, who might declare war on Italy, or abolish secular education, or restrict liberty of worship, or do any other thing disapproved by all European statesmanship, but necessary to the peace of his individual conscience. The leading Orleanists even could not be relied on to support a measure so absolutely hostile to their principles, and so degrading to their reputation for consistency, and all parties were considering some plan for prolonging or terminating the provisional state of affairs, when suddenly it was resolved to make one last desperate appeal to Henri Cinq himself. About a hundred and fifty members selected two of the purest Legitimists to visit Frohedorf, and lay before their chief the difficulties which still blocked his path to the Throne. An account of their interview, obviously official, but possibly coloured by the deep hatred of Republicanism entertained by the *Times'* correspondent in Paris, was forwarded to that journal, and is regarded, we imagine justly, as a manifesto from Henri Cinq himself. It is certainly a little more reasonable than any which have preceded it, but it is very little. The Count, to begin with, announced that the idea of an immediate religious war for the recovery of Rome, attributed to him on all sides, was a mere invention of his enemies; that he was a sincere Catholic, but he held that the policy of France should be "one of peace and reserve;" that Bismarck would soon undo his own work,—this sentence is the *Times'* account,—"and that in any case he had no right to involve the destinies of France in any cause, however sacred in his own eyes,"—a really remarkable statement, indicating that even the Comte de Chambord either sees some moral limits to his divine authority, or believes, as we formerly remarked, on the authority of his letters, that the Kingship is as divine as the Papacy, and the one not to be sacrificed to the other. As regarded the Constitution, he would not give one of any kind whatever, considering the Charter of 1814 still in existence, and needing only to be adapted to modern necessities by himself and the Assembly,—a very natural supplement to his own claims, that Charter having been the last outcropped by a legitimate and absolute predecessor. Finally, as to the Flag, the Count made some statement, which has been evidently obscured on purpose, the manifesto suggesting some utterly unintelligible bargain; but it is obvious from the subsequent action of his party that the Count held to his view, while his repeated declarations that his honour is involved in the rejection of the Revolutionary symbol must render any compromise upon the subject distasteful to a man who believes his own views almost sacred. His own party, therefore, have decided to make the Flag their ultimatum.

We can see little in this narrative, or manifesto, or whatever it is, to increase the chances of the Comte de Chambord. His declaration about Italy may soothe many foreign statesmen, but they have not to elect him; while it will irritate many of his most determined and persistent supporters, who are working night and day on his side. The Legitimists, of whom many are Voltairians, and many more statesmen, will not mind greatly a declaration so politic; but the Clericals, who are his first supporters, will either regard this declaration as a death-blow to their hopes, or hold it to be merely temporary,—that is, will proclaim aloud that Henri Cinq is not the honest man the majority hold him to be, but a mere diplomatising Pretender, eager to obtain a throne by any declaration, however novel, or however false. We believe his declaration perfectly honest, because while Germany exists under its present Government, France would invade Italy at the risk of a counter-invasion; secondly, because Kings rarely, if ever, regard priests as fitting guides in external policy; and thirdly, because the Count has

given no party the slightest right to suspect him of finesse. A man of finesse would have won long since. Henri Quatre would have been on the Throne months ago, but this is Henri Cinq. Rome has never admitted yet the divine right of Kings, else had Pius VII. died before he crowned Napoleon I.; and clerical support will certainly not be strengthened by this declaration, which, again, will not attract the Army, who will no more give up the Tricolour, which has been round the world, than they will put on the red cap; and will not, as we conceive, remove the seruples of the Constitutional party. That Charter of 1814 cannot by any legerdemain be made into a modern constitution. France is not sighing for a Second Chamber of Peers with full powers, but sitting in private; or for Deputies all above forty, and possessed of £500 a year; or for electors of thirty, who pay in direct taxation a minimum of £12 a year, or say possess £200 a year of income. Leave these proposals in, and Gambetta cannot be as Deputy; strike them out, and the unconditioned King must be bound by the vote of a Chamber elected by universal suffrage, which, as he hints, he most strongly disapproves. With the French love for equality they would rather accept the King without any Constitution at all than with one like this, which is based on privilege, is at variance with the whole modern history of France, and must, however modified, be held to erase all that has occurred since 1814. No conceivable plan could so increase the chances of the Prince Imperial, or render the Monarchy so repulsive to the peasants, who, however obedient to officials, are by no means ready to see the voters distinguished into active and passive classes, according to their wealth, or to reverence a new peerage, or to see the resolutions of the elected Assembly nullified by a secret Committee of great persons. They would prefer absolutism to such a system as that, which would, we believe, be also entirely unworkable as a machine of Government. It is our own Constitution under George III., which could not have been worked a week, if the country had not been, on the whole, in its favour. Of course "adaptation to modern needs" might include anything; but it is not intended to include everything, else why does the Count burden himself with so ancient a document, when he might easily *octroyer* a constitution for himself? The truth is, we suspect, he has not altered his mind at all except as regards the expediency of an immediate war for the recovery of Rome, which anybody but a fanatic Clerical can see might involve the very existence of France. Upon every other point he is what he always has been, the representative of the ancient Monarchy, to whom all that has occurred since 1830 has seemed a series of riots, more or less discreditable, to be ended when France finds grace to summon back her legitimate ruler. That the Legitimists and the Clerical Orleanists may accept this view is quite conceivable, and indeed natural, but we cannot conceive the moderate Orleanists voting for any such project; and as the Bonapartists are furious and the Ministerialist Left Centre growing restive, every vote will be required to decree the recall at all.

In the midst of the apparent dead-lock, all kinds of alternatives

are suggested, but they none of the deserve much discussion. The prolongation of Marshal MacMahon's powers for five years is a mere device of the Bonapartists, who want just that time, and his appointment as Lieutenant-General of the King is an absurdity. Who is to appoint and remove him? If Henri Cinq, Henri Cinq may as well do his own work; if the Assembly, then France is a Republic, with a King somewhere or other in a foreign State. The Comte de Chambord may live for thirty years, and for all that time not be seen in France. With a month still to elapse before the Assembly meets, it is useless to predict anything except this one,—that an Assembly possessed of Sovereign power, and uncertain where to deposit its burden, always ends by keeping it provisionally in its own hands.—*Spectator*.

## Shipping Intelligence.

### ARRIVALS.

Nov. 27, *Golden Age*, American steamer, Coy, 1870, from Hakodate, General, to P. M. S. S. Co.

Nov. 29, *Nil*, French steamer, Samat, 1,008, from Hongkong, 22nd November, Mails and General, to M. M. Co.

### DEPARTURES.

Nov. 25, *Menzaleh*, French steamer, 960, Mourrut, for Hongkong, Mails and General, despatched by M. M. Co.

Nov. 26, *James Paton*, British barque, Cotter, 395, for Hiogo, Ballast, despatched by Pitman & Co.

Nov. 26, *Xaca*, German schooner, Callsen, 132, for Shanghai, Coal, despatched by Walsh Hall & Co.

### PASSENGERS.

Per French steamer *Menzaleh*, for Hongkong.—M. and Madame Butzow, infant and 2 female servants, Mr. Platone, Mr. Lenzy, M. and Madame Laiyon, General Hangaly, Messrs. Andrico, Pratto, Dusina, Comte F. Comi, Cheynet, E. N. Hakamo, M. and Madame Gorloch and infant, Mr. Zanetti, Mr. Chatron, M. and Madame M. Rotrou, Messrs. E. Bersani, Nakamo, Sumiya, Koto, Mourrier, and Dapisin.

Per American steamer *Golden Age*, from Hakodate.—Mr. J. Wasson, Lieut. M. S. Day, U. S. N., Mrs. Day, Messrs. F. C. Spooner, J. Wilson, S. Clark, Ari Ikunoski, in the cabin; 4 Europeans, 1 Chinaman, and 29 Japanese, in the steerage.

Per French steamer *Nil* from Hongkong.—Messrs. Rabert, Ahrens, Okamoto, Ihda, Sannier, Grandmontagne, Inashta, Kumarowa, Toutoki, Ondo Rees, Lenormand, Pleury, Guichard, and A. Lanz.

### CARGOES.

Per French steamer *Menzaleh*, for Hongkong:—

Silk ... ..	228 bales.
Cocoons ... ..	nil.
Waste Silk ... ..	nil.
Silk Worms Eggs ... ..	30 cases.

### REPORTS.

The American steamer *Golden Age* reports leaving Hakodate at 3.53 a.m., on the 24th instant, had fresh S. S. E. gales with a heavy S. E. swell on the 25th afterwards moderate sea with N. W. winds and clear weather. Arrived here last night.

CAMP, Yokohama, 28th November, 1873.

C. S. F. FAGAN,—Lieut.,  
R. M. L. I.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, NOVEMBER 29TH, 1873.

THE only Mail arrival of the present week is the M. M. steamer *Nil* from Hongkong this day.  
 The M. M. steamer *Menzaleh* sailed hence for Hongkong on the 25th instant.  
 The cargo of the O. S. S. Co.'s *Ulysses* has been brought on from China by the *Alaska*.  
 The *Menzaleh* took hence 360 bales of Silk for Europe.

**Cotton Fabrics.**—*Shirtings* of 8½ lb. weight are in considerable request more especially in the case of well-established chops. The stocks are exceedingly light, and sales to arrive at short periods can be easily made on advantageous terms. An improvement may also be observed in 7 lb. goods, which are slightly higher; 9 lb. weights maintaining former quotations. The total sales reported amount to 9,500 pieces, and the market closes with a decidedly hardening tendency. We cannot report any business in other descriptions of cotton goods.

**Yarns.**—There has been a strong demand for certain exceptional chops of 16/24 yarn. Owing to the small supply at present to hand the market has gained in firmness, and an improvement of \$1 per picul may be reported.

**Woollen Fabrics.**—A very small business has been done in these goods, and trade is reported to be dull and unsatisfactory in the extreme.

**Iron and Metals.**—There is no change to report in market rates, and we are unable to learn that any transactions deserving of mention have occurred in the course of the week. We therefore continue our quotations of last week.

**Sugar.**—Prices for all kinds of sugar are unchanged, and we can only report a very slight enquiry. There are no arrivals to report. Sales are:

Kongfung .....	410 piculs.
Swatow .....	300 "
Formosa .....	1,000 "
Kookfah .....	149 "

**Rice.**—There have been no transactions and our quotations must be regarded as entirely nominal.

# COMMERCIAL INTELLIGENCE.

(Continued.)

**Silk.**—Since the 18th inst., arrivals are 800 bales and settlements nearly amount to the same quantity. The demand continues active and prices for all grades remain firm at previous quotations.

**Silk-worm's Eggs.**—The transactions in the open market have been insignificant; but cards of the reserve (with the black stamp) continue to be offered at from \$0.40 to \$0.60. To what extent they will have been sold and smuggled into Yokohama will appear by the next shipments via San Francisco.

Total shipments to date are computed at from 1,320,000 to 1,340,000 cards.

**Tea.**—Our Tea market has been fairly supported for the past week, settlements amounting to a total of piculs 2,300.

Good Medium and Fine classes have been most in demand and to-day's rates shew a decided improvement on last weeks quotations although we do not alter figures.

Arrivals have as reported in our recent issues, been regulated by settlements, and stocks remain, much in the same position as reported last week.

TIMES!

## HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

## THE GREAT CURE ALL!

## HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

## THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

**SEVENTY YEARS OF SUCCESS**

Have proved beyond question that

**ROWLANDS' MACASSAR OIL**

In the best and safest Restorer and Beautifier of the Human Hair. Perfectly free from any poisonous or mineral admixture, its certain good effects are lasting, even to the latest period of life, it prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandruff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 6d., 7s., 10s. 6d., equal to four small, and 21s. per bottle.

**CAUTION.**

Each Bottle has a GLASS STOPPER, instead of the Cork as formerly. All with CORK are SPURIOUS IMITATIONS. This Notice is deemed necessary, as the Proprietors have received intimation that a large quantity of Counterfeit, of the most pernicious quality, has lately been sent from France and Germany to India and the Colonies under their names.

**ROWLANDS' ODONTO,**

Or PEARL DENTIFRICE, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipient decay and polishes and preserves the enamel, to which it imparts a PEARL-LIKE WHITENESS.

**ROWLANDS' KALYDOR.**

An Oriental Botanical Preparation. This Royally-patented and Ladies' esteemed Specific realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling, and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle. Sold by all Chemists and Perfumers, and at all Bazaars throughout China and Japan.

**ROWLANDS' ESSENCE OF TYRE**

never fails to produce immediately a perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Black, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle.

All these articles have been used and justly appreciated by all the Sovereigns and Courts of Europe, and the Pope of Rome, and the aristocracy of the world, during the last seventy years, being of inestimable value to those who have once used them. They are sold by all Chemists, Perfumers and Bazaars throughout India, the Colonies and South America.

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. IV.—No. 49] YOKOHAMA, SATURDAY, DECEMBER 6, 1873. [PRICE \$24 PER ANNUM.

## MARRIAGE.

On the 3rd instant, at H. B. M.'s Legation, Yokohama, Japan, CHARLES D. MOSS, of Cirencester, Gloucestershire, to ELLEN JANE, youngest daughter of the late H. E. STANLEY, Esq., of Stourport, Worcestershire.

## Notes of the Week.

For the first time in the history of this settlement the Scotch residents of Yokohama assembled on the evening of the 29th ult. at the Grand Hotel for the purpose of celebrating the festival of their patron Saint by a national dinner.

Some forth-five gentlemen including invited guests, among whom were Sir H. Parkes, Col. Richards, R. M., and Captain Leat, R. N. sat down to table, the Chair being occupied by Mr. W. W. Cargill, and the Vice-chair by Mr. W. Macdonald.

After partaking of an excellent dinner in which various national dishes figured prominently—the toast of “H. M. the Queen” and “Members of the Royal family” were given and duly honoured by the company.

The toasts of the “Army and Navy” (replied to by Col. Richards, R. M. and Captain Leat, R. N.) and the “Diplomatic Service,” to which Sir H. Parkes returned thanks, having met with due response, were succeeded by one to the memory of the Saint in whose honour the guests had met. Following these the toast of the “Land o’Cakes” proposed by Mr. Macdonald; “The Lassies” by Mr. Black; the “Poetry and Literature of Scotland” by Mr. Wylie; “The Bench and the Bar” by Mr. Macdonald; “The Press” by Mr. J. A. Fraser, and various others, were received by the company with due compliment and were responded to at greater or less length by the gentlemen with whose names they had been connected.

A very pleasant evening’s entertainment was brought to a close about midnight.

A Special Service was held in Christ Church on Wednesday, December 3rd, in accordance with a suggestion from the Archbishop of Canterbury that this should be observed as a “Day of Intercession in behalf of Missions.”

The usual Morning Service was conducted by the five clergymen present—of the English Church, Rev. Messrs. Wright and Shaw, Missionaries connected with the Society for the Propagation of the Gospel in foreign parts; and of the American Church, Rev. Messrs. Blanchet and Cooper, also Missionaries; the Acting Consular Chaplain being, in some sense, a link between the two, combining British nationality with American orders.

The Sermon was preached by the Rev. W. B. Wright, on the text “Whatsoever ye shall ask the Father in my name, he will give it you” (John xvi. 23). The Preacher’s remarks were made the more impressive by the fact that he was led to offer himself for Missionary duty in Japan while engaging in similar services last year in London.

MR. WAGNER’S concert took place on Thursday evening.

The quartet which opened the entertainment was an arrangement of some four or five of the more popular airs from *La Sonnambula* for piano forte, violin, flute and violoncelle. Its texture is slight, though the piano-forte part is written with some pretension and merit. The opera is perhaps the prettiest, and is certainly the most popular, that ever was

written, and there must be great merit in music of which this can be said. It is chiefly the merit of simplicity and appropriateness. The composer seems to have written his work easily within the range of his powers, which are nowhere forced or strained, and to have contented himself with the simple illustration of simple village life, the moving incident in which, though strange and exciting, did not demand the highest flights of musical art, though in stronger hands such resources might easily have been expended on it without laying the composer open to the charge of undue prodigality. It is impossible to recall this charming little opera without associating the character of *Amina* with all that has been superlative in the art of vocalization during the last thirty years. Unquestionably it was the part in which Jenny Lind appeared to the greatest advantage. Her features, complexion, figure and character fitted her peculiarly to make a deep impression on the public mind in this rôle, and her vocal powers were such that she excited an enthusiasm in it wholly unparalleled, at least within our experience. Especially in the closing song of the opera, “*Ah, non giunge uman pensiero*”—the last of the little quartet we are considering—was this impression so very vivid. When it was re-demanded—as it always was—she was accustomed to repeat it with some graceful variations of the original text which seemed the natural outcome of her own feeling rising as the music intensified it; and when, after that, it was again called for, she poured it forth with coruscations of ornament so dazzling that the delight she gave almost turned to pain, so intense did it become. The heart-strings seemed as if they would snap; the emotions were wrought to a pitch perilous to the delicate machinery over which they swept with disordering violence; and the brain was excited to something akin to frenzy, of which these very words show the enduring nature when the recollection of it is recalled.

A well-known glee, or part song, as it should more correctly be called, followed the quartet—*The Huntsman’s Farewell*, by Mendelssohn. It was written with an *ad libitum* accompaniment of four Horns and a bass Trombone, and this would undoubtedly add to its effect, were the instruments in the hands of skilled players. But we should deprecate any such addition from amateurs, who are generally more remarkable for vigour than delicacy in handling these formidable instruments.

Mendelssohn is never more loving and lovable than when portraying the emotions excited by contact with external nature. As the eye glances over the catalogue of his songs it meets the names of birds and flowers and seasons and the enjoyments or occupations of the country. When he paints the Spring we feel the warm sunshine and see the unchained rivulets; the birds trill merrily as they fly; the mountains lose their snowy robes; the bees hum on the blossom and the tender green buds burst forth on the trees; the soft and perfume-laden air sighs to the blue sky; all things are lovely, cheerful and bright, and the enraptured heart beats high as with its most cherished passion. And when Autumn comes he sings of it as only a poet can;—a bard-poet, too, like Shelley or Keats; not an artist-poet like Tennyson or Longfellow: one who sings, not because he can, but because, heaven-compelled, he must, by the law and condition of his nature. And thus the melancholy which pervades his autumn songs is not the mere effect of cunning means, of minor chords skilfully disposed and progressions which can be taught by books and learnt by men who have brains but not souls. When he sings of Autumn, he has autumn in his heart. Spring and Summer

have passed away and vain hopes have brought sighs and sadness. The winds wail with the presage of coming darkness and winter, and dying nature teaches man that he too is mortal. And if he moralizes on all this, as in a strange earnest way he always seems to do, it is not because he desires to teach, or teaches with the intention of doing so; but because his lofty moral sense so transfuses his emotions that he can not but teach even as he sings. We see the same thing in Shakespeare, though arising possibly from a very different source. In Mendelssohn the obligation of duty, and the reflection of the sense of it, seem to proceed from the ever-present force of a law which brought all the parts of his being into harmony, and a disregard of which would produce discord in him. Thus he obeyed it, not unwillingly or with difficulty, but rather as one who felt happier, more emotionally healthy, and more perfect for an obedience in which he delighted. Shakespeare reflected these obligations and this sense because he saw man in all his different and complex relations to God and his fellow man. Infinitely more profound and comprehensive than Mendelssohn, he seems to be didactic because the world's condition demonstrates the necessity for laws, and because universal discord and disorder would

Divert and crack, rend and deracinate  
The unity and married calm of states  
Quite from their fixture,

were laws unheeded and man's passions allowed to assert their predominance. He does it insensibly, as it were, and his teaching springs naturally and without effort from the events or emotions he depicts. But the tendency to do it, the natural obligation, we might say, never deserts him, and its effects flow from his mind as luxuriantly as the flowers of his poetry spring from his imagination.

In "The Hunter's Farewell," or *Der Jäger Abschied*, as we had rather see it called,—for every thing that came from his lips as from his pen has become almost sacred to us,—we have, in a song extending only over some twenty-four bars, an address to Nature, so tender, so loving and sweet, that except in his works we hardly know where to look for a parallel to it.

But we are compelled to say that it was ill-executed, and this, not only because the mere mechanical difficulties had not been mastered, but because the singers—we speak generally, of course—gave no evidence that the spirit and meaning of the composer had reached them. For the mechanical difficulties, we refer to the eighteenth bar, which contains a harmony full of beauty, and instinct with tender sentiment. But these were lost because the passage was not given with sufficient accuracy. There is a discord in it which requires to be held until the proper time comes for resolving it, when this resolution is the source of pleasure to the ear and a higher pleasure to the mind and emotions. But though the discord was there, it was not accurately resolved, and the consequence was a sense of pain instead of one of pleasure. Then, again, the song was taken too fast, a sure sign that the meaning of the music was not present in the mind of the singers. All music which means anything dictates its own time without very slight variations, and if, and when, this meaning is apprehended the performer can hardly go far wrong. Then the *crescendo* effect on the seventeenth and eighteenth bars was missed, partly because being taken so fast it was almost impossible to give it, and partly because the composer's sentiment was not properly caught by the singers. Our object in making these remarks is to improve a class of music which we have every facility in this place for performing with almost entire perfection. Our amateur instrumental music never can be very good, but our amateur singing might be made, with some pains and knowledge, as good as it is anywhere else. But to accomplish this there must be severe, or at least serious, discipline and drilling, a spirit of implicit obedience, a willingness to merge the personal individuality into the totality of the corps, and to become at first, at least, a mechanical instrument in the hands of another. Without this no concerted vocal music worthy of the name can ever be achieved.

Some slight changes in the programme were here announced

owing to indisposition on the part of some of the intending performers.

Mr. Black then sang one of the great airs from *Judas Macabæus* "Arm, Arm, ye brave," preceded by its recitative "I feel the Deity within," and it is needless to say that he sang it like a thorough musician. We never tire of hearing or praising Mr. Black in these performances, and though we are not always with him in the choice of his songs, we are bound to say that he never fails to please his audience, whether his selections please us or not. Mr. Townley then sang with good expression and finish a song of Mrs. Alfred Phillips, *My Queen of Love*, a pretty example of English ballad writing, very pleasing and melodious.

Mr. Marsh's fantasia for the harp gave him an occasion for displaying his mastery of the instrument he loves and plays so well, and the applause which followed his performance proved how much it was enjoyed and appreciated. The first part of the concert closed with a concertante duet for flute and piano-forte by Mr. Wagner and Mr. Marsh which deservedly drew an unanimous *encore*. The playing of both was an admirable lesson to amateurs; clear, conscientious, accurate and intelligent.

The second part opened with a part song by Franz Abt, *Vineta*. It is a pretty trifle and was fairly rendered, but, like the other, wanted accuracy, which means drilling and work. We must also remark a disposition to give a prominence and individuality to one of the parts which is subversive of first principles in glee-singing. This will never do. Whatever else has to be done in part music, the ranks must be dressed, or there is an end of everything.

Mr. Chapman's performance on the violoncello was that of an artist, but we doubt whether his selection was very happy. Few of his audience could understand the difficulties he conquered or what knowledge and mastery of his instrument he showed. But he played well, and his command of the violoncello is enviable indeed.

Marschner's song *Hans Heiling* was then sung by Mr. Anderson, whose pardon we must ask for not having mentioned his performance of *Der Wandrer* in the first part. *Hans Heiling* is written with such extraordinary intricacy that we cannot commend the selection of it, except that we must be grateful to Mr. Anderson for introducing a new and excellent piece of music to a public somewhat wearied with what may be called "favourites." It required a large knowledge of music to follow the song at all, for many of the profounder resources of musical science are displayed in it. But they are somewhat thrown away under such circumstances, and the general impression made by the song, though favourable to the singer, was against the composer—an injustice to the latter, undoubtedly, as the work is one of great merit. It is, however, unnecessarily involved, and makes too great a strain on the intellect to follow it.

Mr. Black's "John Grumlie" and "Wha wad na' fecht for Chairlie" were good features in this part of the concert, and he sang "The Vale of Avoca" with great taste and feeling. Mr. Wagner brought the entertainment to a close with a really excellent performance on the violin, and having previously distinguished himself on the concertina, he earned the applause due to the master of many accomplishments.

We wish we could say there had been a good house, but it was otherwise; and we think we ought to add that the lack of variety in our concerts is largely responsible for this. The public is a little weary of these occasions. They are dull; they last too long; and there is a want of finish in the greater part of the amateur work—we except always Mr. Black—which tells much against them even in the mind of the most tolerant and kindly audience we have ever known.

This is a sign that there must either be fewer concerts or better music, and we would far prefer the latter. Some effort should be made to get a good piano into the room; the present instrument has neither power nor tone. Then the concerts must be shorter. They are like the boots one sees on the feet of the Japanese; infinite leather and no fit. The part-songs should be performed by the picked voices of our vocalists, and the drilling for them must be far more severe. Some good instrumental chamber music should be introduced. The whole

performance requires to be broadened and shortened, and unless this is done the concerts will remain as they are, or cease to be attended and therefore given.

WE publish elsewhere a curious and interesting translation of a recent edict regulating the native newspaper press. Of course it is destructive of the first principles of journalism, properly so-called; but it is quite conceivable that some elasticity will be allowed in its interpretation and application. A liberal, easy, sensible censorate, if one could get such a thing, would be the best probable means of regulating the press; the grant of an entire freedom to it would be obvious folly. Yet the Government should not ignore the vast advantages it would derive from a more efficient means than it now possesses of acquiring a knowledge of public opinion, or the beneficial effect upon the public mind of the power of expressing its opinion upon national affairs. Of course the freedom of speech and the love of liberty are not only inseparable from the Western mind, especially the mind of the Anglo-Saxon race, but we look upon them as the causes of nearly all our greatness and prosperity. They are life-giving and life-sustaining principles in themselves, and we could no more exist without them than without air. In this way the Japanese are, as regards these principles, a different class of beings from ourselves, and no more require this freedom than certain orders of life require the unintermitted supplies of air necessary to us. We can hardly give a better idea of this difference than by the following eloquent passage from one of De Tocqueville's works, which, if we are correct in our views, can hardly be even intelligible to a Japanese mind, however cultivated or advanced.

I have often asked myself what is the source of that passion for political freedom which in all ages has been the fruitful mother of the greatest things which mankind have achieved—and in what feelings that passion strikes root and finds its nourishment.

It is evident that when nations are ill directed they soon conceive the wish to govern themselves; but this love of independence, which only springs up under the influence of certain transient evils produced by despotism, is never lasting: it passes away with the accident that gave rise to it; and what seemed to be the love of freedom was no more than the hatred of a master. That which nations made to be free really hate is the curse of dependence.

Nor do I believe that the true love of freedom is ever born of the mere aspect of its material advantages; for this aspect may frequently happen to be overcast. It is very true that in the long run freedom ever brings, to those who know how to keep it, ease, comfort, and often wealth; but there are times at which it disturbs for a season the possession of these blessings; there are other times when despotism alone can confer the ephemeral enjoyment of them. The men who prize freedom only for such things are not men who ever long preserved it.

That which at all times has so strongly attached the affection of certain men is the attraction of freedom itself, its native charms independent of its gift,—the pleasure of speaking, acting, and breathing without restraint, under no master but God and the law. He who seeks in freedom ought but herself is fit only to serve.

There are nations which have indefatigably pursued her through every sort of peril and hardship. They loved her not for her material gifts; they regard herself as a gift so precious and so necessary that no other could console them for the loss of that which consoles them for the loss of everything else. Others grow weary of freedom in the midst of their prosperities; they allow her to be snatched without resistance from their hands, lest they should sacrifice by an effort that well-being which she had bestowed upon them. For them to remain free, nothing was wanting but a taste for freedom. I attempt no analysis of that lofty sentiment to those who feel it not. It enters of its own accord into the large hearts God has prepared to receive it; it fills them; it enraptures them; but to the meaner minds which have never felt it, it is past finding out.

WE have published elsewhere *in extenso* a paper from the *China Review* entitled 'A Reply to "Macao and its Slave Trade,"' and when we say it is from the pen of Mr. MESNIER who lately visited Japan in the suite of the Portuguese Minister, those who were so fortunate as to make his acquaintance will not be surprised that it is full of healthy enthusiasm, intelligence and humanity. It is the more pleasant to make this acknowledgment that during the time when the *Maria Luz* was detained here, some of our views upon the connection of Portugal with the Coolie trade brought us into a transient antagonism with Mr. MESNIER, in whom we now recognize a staunch ally. Assuredly all that he claims for the past glory of Portugal we fully conceded in our articles; and if he will review his own strictures upon Macao as at present existing and compare them with ours, he will hardly now accuse us of malice or overstatement.

We doubt if we shall answer his purpose or our own by analysing his paper very critically and categorically, and here and there we should venture to disagree with him. It speaks

for itself and does honour to its author. All that we desire he desires, while his special experience has enabled him to track the roots of the trade and show the difficulties of dealing with it better than we could have done. Our great hope is that his views may be, or become, those of his Government and that Macao will be purged from the stain of this terrible trade. Of his sincerity there can be no question; let us trust that the protestations which have been freely made from Lisbon are equally sincere and will be translated into definite and effective action on this point.

It has been intimated to the Peruvian Minister who was accredited to Japan and who recently crossed over to China, that he will be received at Peking with all due courtesy; but that so long as one Chinese remains in Peru detained against his will, and in the condition of virtual slavery into which he has been entrapped by the Peruvian agents in China, no treaty with Peru will be made by the Court of Peking.

A BALL is to be given on Friday next, in honour of Mr. Watson, late H. M. Chargé d'Affaires during the absence of Sir Harry Parkes, in token of the estimation in which his services in that capacity, and his liberal hospitalities during his tenure of office, are held by the foreign residents.

We have been favoured with the translation subjoined, for publication, of a copy of the Japanese "Statute of Limitations," of which foreigners should take a note, lest hereafter they may be prevented from obtaining a remedy against Japanese debtors. In a case of this kind, where legislation bearing upon foreign interests takes place, it is the duty of the Government to publish it in a foreign newspaper for public information, and Ministers should enjoin it upon the Government, to prevent future misunderstandings, complications, and losses.

Proclaimed by IWAKURA, TOMIMI UDALIN, on the  
5th November, 1873.

From money dealings and exchange of produce, down to the multitudinous business transactions of other sorts, both parties mutually agree upon a fixed time for receiving and delivering; and although when one party to an agreement breaks his contract, it is permitted to the other at once to make complaint at the Saibansho, the latter will sometimes grant an extension of time, and abstain from bringing suit. This being only ordinary kindness, and but just, the forbearance from immediate proceedings, and allowances of an extension of time are left entirely to the free-will of the people. But in the absence of any rule of law for the limitation of the time for bringing action, many years and months are apt to be let slip by; and upon action being brought, the circumstances have often become so involved in doubt by a death or removal to a place unknown, either to the debtor, creditor, guarantor, or witness, that even after judgment, numerous inconveniences arise.

Wherefore, it is hereby made known that a limitation of the time for bringing actions is decreed, dependent upon the nature of each case. All persons, therefore, who shall neglect to make complaint, and let the time for bringing an action pass, with respect to agreements entered into by them after the 1st of January, 1874, will be considered to have themselves cancelled the agreement; those who should receive, will forfeit their right to receive; those who should deliver will be released from their obligation; and even though complaint should be made it will not be entertained.

#### RULES FOR THE LIMITATION OF SUITS.

Section 1.—Tutorial fees. Hotel accounts. Carriages or fare. Victuals and drinks. Bargain money. Mutual credits between merchants. Wages of artisans and mechanics. Coolie hire. Contract money. Fees for theatrical and other entertainments. Remuneration to singing girls and actors. Suit must be brought within six months.

Section 2.—Fees for medical attendance and medicines supplied. Charges for board provided by teacher to pupil. Ordinary purchase and sales, not being mercantile transactions. Wages of servants engaged by the year. Suit must be brought within a year.

Section 3.—Rice and money lent for a fixed time, together with the interest, if any. Rice and money deposited for a fixed time, together with interest, if any. Rent due upon houses or land. Farming and land cultivation dues. Fees for certifying. Tenants' deposits as security for rent. Fees payable on goods lent for hire, and indemnification for loss or damage. Remuneration for care and bringing up children.

Wages of servants engaged for a period of seven years. Suits must be taken within five years.

Section 4.—As regards written agreements in which no time is specified, the day on which complaint is filed will be regarded as the termination of the agreement. Suit may therefore be brought at any time.

Section 5.—The 31st of December, 1873, is fixed as the date of expiration of contracts entered into, and the time for carrying out of which shall have expired previous to that date.

With regard to contracts not to be fulfilled prior to the 1st January, 1874, the time for bringing action will begin to count from the day after breach, and run for the periods limited in Sections 1, 2, and 3.

NOTE.—The third Section of the Law proclaimed in Notification No. 300 of 1872, is not affected by the above.—*Herald*.

HANABUSA Gwaimu-daijo has been appointed Minister to St. Petersburg in the room of Sawa Nobuyoshi, whose death, which occurred on the eve of his departure for Russia, we chronicled in the early part of last October.

##### II.

##### NATIVE OFFICIALS.

THE idea of a system of education pre-supposes a teacher-corps of instructors or faculty, and a governing body of trustees, directors, or council of regents. The names of the two bodies may vary in different countries, but for the successful administration of a large school, or university, a body of directors is needed. The functions of instruction and government must be distinguished, even though in small private schools, for instance, they may be united in the same persons.

That the office of governor or director, is a very important one, that a competent person in that office is a co-worker with both teacher and pupil, and an indispensable instrument in a system of education, we need not here argue to prove. We suppose our readers to be familiar with the educational systems of their various countries.

It would be an anomaly as strange as it is happily rare, were a school of any reputation in Europe or the United States to have a board totally unfit for, and inexperienced in, their duties.

To state the case a little more strongly; Suppose these directors were profoundly ignorant of what ought to be studied, and of what the studies proposed really were; suppose them ignorant of the language in which they were taught, and that for any glimmerings of light they could catch they were dependent upon very poor interpreters; and finally that notwithstanding these apparent drawbacks, these directors aspired to make all the rules for teachers, and scholars, to choose all the studies, to direct all the operations of the school, and to have all the teachers obedient to their will and pleasure;—if our readers can grasp such a monstrous conception as this, then they can understand the educational situation in Japan. We have not drawn upon our imagination. We are stating simple facts. We refer not to one institution alone. From Nagasaki to Hakodate, and from Kanazawa to Tokei, our conception and the reality are the same.

There is a great gulf of difference between the sentimental ideas with which people at home regard their fellow-countrymen who have been called to Japan to be teachers and professors, and the actual facts. The gentlemen in the educational service of Japan, when at home, were informed by their polite Japanese friends, that if they would come to Japan, they would be treated with the highest honour. "No position is more honourable than the teacher's," and "If our teacher dies, we mourn for him as for our father," etc., were the honeyed words which the Japanese, eager to attract an instructor from his honoured post to their own "college" or "university," used. The teachers came from many countries, and great was the honour which Japan received. The American and the English newspapers were full of her glory; every one, including the happy dupes themselves, believed all the fair promises of their flatterers. The teacher's position is an honourable one in such highly civilized nations as England and the United States; how much more so in Japan!

But Japan is the land of surprises. Strange to say, the Japanese official does not like the professional teachers, the college-bred men, the professors. He thinks they are obstinate, rebellious, excessively troublesome. Foolish men that they are, they expect to have a voice in the government of the school, and even want to regulate the studies. Worse than that, they sometimes ignore the "rules" and trample under foot the first instincts of a *yakunin*. It is a fact, but not a wonder, that the native official has a chronic antipathy to a genuine teacher, and prefers the man whom he can pick up, and whom he can rule; for does he not hold in his hands the power even to grant contracts?

We need not criticize. The statement of fact is sufficient for our purpose, which is to prevail on the Education Department to reform a state of affairs which has become a bye-word and a reproach to those who wish them well, and the target for the jests and scorn of the unconcerned. Of all the strange chapters in the history of education, the attempts of native Japanese officials to conceive and carry out a scheme of foreign education form one of the most curious and comic chapters. Indeed our greatest fear is, that our statements will not be believed. However, if the Scotch proverb says truly, "seein's believin; but feelin's the naked truth," we are but setting it forth.

We shall speak of the schools of the capital, not merely because they have been the most conspicuous victims of the empiricism of native officials, but because that unique phase of human nature called *yakuninerie* has there received its highest development, and brought forth its choicest fruits. We shall take comfort in the thought

that in spite of its baneful effects, nay, under its very shade, the thirst for education among the youth of this land is still unquenched.

Since the first beginning of foreign education in Tokei, the native officials placed over the foreign teachers by the Education Department have been utterly unfit for their post as Directors of schools of foreign education. Refusing to put any powers in the hands of their foreign servants, they spent their time chiefly in hampering their efforts, impeding progress, and apparently endeavouring to stamp all hope and energy out of the pupils. The typical *yakunin* sat in the chair of ruler of the highest educational institutions in the land, and sits there still. As the Japanese have the curious custom of changing their own names several times during their life time, true to their customs, they changed the name of their chief school four times in little more than as many years. Something deeper than instinct actuated them in this phase of their educational policy. Each change involved appointments, promotions, and a vast amount of clerical, carpenter and contractor's work. In a native official's eye, no man can be a *yakunin* unless he makes many rules. Of these rules there has not been, nor is there, the faintest likelihood of there being any end. To pass away time, the school officials—we need specify no one place of their achievements—showed rule after rule, regulation after regulation, so fast that one poetically inclined was reminded of autumn leaves. Many of them were so unnecessary, so unreasonable, and often so trivial, that the foreign teachers could not obey them. The native officials, however, varied their leisure by changing the course of studies, and adopting new ones. It was simply a matter of mensuration and Chinese characters. So many hours per week, so many square inches of paper; fill up the squares with Chinese characters, (which often mistranslate what the native official knows almost nothing about,) and the new curriculum is laid down, not to be taken up again for several weeks. Having found out, however, that he had not attained to perfection in curricula-making, the official believing that he had struck the right course this time, tried another. Having thus in a few months acquired skill in making short roads to learning, gained some routine knowledge, and a faint conception of foreign education, he was promoted to a higher office in the same or another department, and a new, inexperienced and incompetent man stepped in his place.

The students had just grown used to the vagaries of one director, and the foreign teacher had smothered his contempt for, and perhaps gained the confidence of, his superior, when a new one arises who knows not his own business or the characters of his inferiors.

There are two bright lines in the spectrum of this subject under examination. The teachers and professors who know their business do it, paying little attention to such annoyances; and the scholars, most of them ever eager and insatiable after knowledge, remit no diligence and yield to no despair.

But enough of this. We have pointed out the grievous errors and abuses in one part of the Japanese system of education. It has given us no pleasure to expose them. We do not make merry over their shortcomings, nor would we raise a laugh at the expense of a people so nobly struggling from ignorance into knowledge; but we wish to show the evils and point the cure. It would be cruel and unfair to sneer at their lack of Western science. We are not doing that. We simply deny their ability and fitness to be directors and head-masters over foreign instructors. We have not only felt the galling yoke of

the despotism of ignorance, but have seen its blight on noble young minds, and know of the fearful waste of time, of money, and of earnest effort, which it has entailed upon the Japanese people and their sons.

The remedy is simple. The chief college, and the school of languages in Tokei should be put under the care of a competent and faithful foreign master. In every one of the Japanese schools for foreign education, the teacher, if a professional instructor, as he ought to be, should be given power to choose the studies and to govern his classes.

There is plenty of work for the native official to do. He should be warden over the pupils; he might have charge of the pecuniary affairs; and he should have the control of all that is outside of educational matters, strictly so called. In short, he should attend to what he knows about better than the foreign master, professor or teacher: with what he knows next to nothing about, let him not meddle.

It cannot be objected to this that the proper men who can be trusted, are not to be found. The Japanese know, and have in their employ, men of blameless life and faithful labour. They can easily get from abroad, or can find on their soil, men whose record is known. They need not complain that no foreigner understands their needs. They can easily limit the authority of their teachers and principals. If necessary, these men would give bonds for the faithful performance of work, and the abstinence from what their employers think will conflict with the peace of the empire. The foreign educator does not wish to usurp the treasurer's office, to make proselytes, to change the social life, dress, food or etiquette of the Japanese young men. In these things he is but an adviser to give his counsel when asked or needed. He should have no power in these things, except so far as is necessary for discipline and the inculcation of Western language and science. But whether native or foreigner, let each man be master of what he professes to teach or pretends to perform.

#### THE KAK-KE.

We are permitted by the *Deutsche Gesellschaft für Natur und Völkerkunde Ostasiens*, to publish a translation of the able and exhaustive paper of Dr. Hoffmann on this malady, which appeared in the July number of the Society's "Transactions."

*Kak-ke*, a compound word derived from the Chinese *kiak* (leg) and *ke* (air), is a species of endemic disease peculiar to the islands of Japan. It possesses considerable similarity to the Indian malady known as *Beriberi*, and was by the Dutch, and subsequently by other foreigners, erroneously supposed to be identical with it.

#### ÆTIOLOGY.

Low-lying spots on the sea coast, more especially such as are situated close to the mouths of large rivers and well-watered valley lands, would appear to be the chief homes of this disease, in which it makes its appearance regularly at the beginning of Spring. It first attacks only such persons as have suffered from it in preceding years once or more frequently, and on the approach of warm and damp weather assails also those whom it had hitherto spared.

Periods of continued rain, accompanied by absence of wind and a high degree of temperature of the air are most favourable to the introduction of the malady and to the aggravation of such cases as already exist. During the warm and dry months and throughout the summer new cases are of most frequent occurrence, relapse cases being less numerous. The sufferers get better at this season and their symptoms increase less rapidly than during the prevalence of hot and humid weather.

In the absence of treatment, however, the malady if

taken at this time is tedious, and its worst forms then present themselves. A cooler climate and change to a more elevated situation exercise a favourable influence upon the slight or moderately severe cases of the disease and their symptoms frequently disappear, while the more severe cases terminate fatally in the absence of successful treatment.

People whose necessities compel them to a life of great bodily activity—a class found almost exclusively in the lowest stratum in this country—are comparatively free from the attacks of *Kak-ke*; whereas those following a sedentary occupation—more particularly learned men, scholars and the higher classes who perform but little mental or bodily labour—are often peculiarly susceptible to it. Youth and middle-age are the periods of life at which it is most to be feared. It seldom attacks either the very young or the aged, and the female sex would seem, at all ages, to be less exposed to it than the male.

The natives of places where this disease may be said to be located appear to sicken much less frequently than those dwellers who immigrate thither from other districts, although it is chiefly only in the second summer of their residence that the complaint affects them. This observation applies, however, to the Japanese only, including the Ainos or aborigines from Yezo—many of whom have been treated by the author for this complaint in Yedo this year—since neither Europeans nor Americans have as yet suffered from it.

At all periods of delicate health, the constitution is peculiarly liable to attack from this malady: such as those which arise from intemperance, an unchaste life, child-bed and complaints of a feverish nature such as endocarditis, pleuritis, exanthematous and intermittent fever. In some cases the author has observed that endocarditis precedes the outbreak of *Kak-ke* by a few days, and he is disposed to assume that it does not present itself as an independent malady, but may be considered as only an incipient stage of disease in which the same abnormal action of the heart is observable. This may possibly develop into endocarditis, and such is found not infrequently to be the case.

#### SYMPTOMS AND COURSE OF THE DISEASE.

The sickness in almost all cases begins without any sense of pain, feverishness, loss of appetite or indigestion, and it thus happens that a week, or sometimes, indeed, an even longer period elapses before the attention of the patient is aroused to his condition.

The earliest symptoms are, generally speaking, a feeling of heaviness in the lower extremities, a looseness in the knee-joint, an increased sense of fatigue in walking, tendency of the lower part of the leg to become insensible (when the patient is seated on it in the Japanese fashion) and a diminution of sensibility in the feet which gradually attacks the knees. The sufferers easily lose their shoes without being aware of their absence.\*

At the same time while the sensibility of the body to external impressions is lessened, a constantly increasing pain and stiffness in the region of the lower extremities may be observed, and in other and frequent cases the patients complain of a sense of inconvenience in the skin of the extremities, which feels as if compressed with a linen cloth.

Concurrently with the first appearance of anæsthesia and muscular debility, the patients in many cases are sensible of a feeling of uneasiness and repletion in the region of the stomach, attended by palpitation of the heart and, not unfrequently, a difficulty in breathing which appears to accompany the slightest exertion. Frequently, indeed, these—and more especially the palpitation of the heart—are the first, and for a long time the only subjective symptoms of the disorder. The feeling of oppression is rarely altogether absent: indeed, in none of the cases which the author has observed—numbering some hundred—was the action of the heart quite normal, and in addition to this the first sound of the heart frequently exhibited a change. It was usually dull and prolonged, and often, as in cases of excited action of that organ, of a grating or even somewhat tinkling character and not unfrequently accom-

panied by a louder noise. Seldom indeed was the first sound replaced by a blowing noise.

The second sound was in most cases unaltered. Occasionally there is a noise as of rattling in the two arterial openings, frequently accompanied by a dragging, guttural sound. Both the systolic and diastolic sounds evinced a changeableness in character and extent, and the latter sometimes disappeared some days after their first exhibition.

In the larger number of cases œdema of the skin accompanies these symptoms, beginning at the ankle joints and rapidly extending to the knees. This œdema may, in some cases, accompany the first stage of anæsthesia; in most, however, it follows it at a period varying from a few days to a few weeks.

In many cases œdema of the muscles of the calf is observed shortly before these symptoms. They become strained, are in the highest degree painful, and appear unnaturally hard and thick. The *tendo Achillis* also becomes affected, inasmuch as the sharply rising curve, which under normal circumstances characterises the calf of the leg in men, becomes effaced, and extends downwards as in the female sex.

It may be assumed that the other muscles and more especially the fibres of the body which cannot be submitted to examination are œdematous in cases of *Kak-ke*. The author has had an opportunity of remarking the following in a case of *Kak-ke* which was developed in the course of a traumatic pleuritis succeeded by pyothorax. An incision having been effected in the pleura he observed that notwithstanding the freedom of the skin from œdema the fibres of the walls of the thorax and particularly the muscles were saturated with serum which pervaded the entire body and even reached the extremities. From this wound (whence there flowed a sanguineous serum during the operation, and which had been plugged in order to secure its better treatment), there issued during the following days a continuous stream of serum of a pale flesh-colour. In a few days the patient became emaciated to a very noticeable extent, and a man, muscular and stout prior to the operation, was reduced by fever and a moderate development of pus to a wasted and atrophied condition of body in the course of three days.

Sometimes, though chiefly in cases of relapse, the malady exhibits only single and incomplete symptoms or takes, with a lesser degree of intensity, an irregular course. Thus, occasionally, only an insensibility of the nerves of the skin is observable, while in other cases, besides anæsthesia of the upper-lip and finger tips and a dull and grating sound of the heart no irregularity is to be remarked; though with reference to two of the cases which came under my notice last year an incomplete relapse must be admitted. Other, and somewhat more frequent cases consist simply of palpitation of the heart during the entire hot season. In not a few cases the symptoms are limited and disappear on a change of place of residence or on the approach of the cold season; more frequently, however, they increase both in extent and intensity. Anæsthesia first attacks the thigh and next, in most cases, the points of the fingers. It then seizes the abdomen and usually, at the same time, proceeds from the upper extremities in an upward direction. Occasionally at this stage of the disease, if not earlier, insensibility of the parts surrounding the mouth is perceived, and in more rare cases of the tip of the tongue. The breast, back and neck, and sometimes even the head, are next attacked.

Up to this point as also in its further progress the œdema is independent of the condition of anæsthesia.

Occasionally when this is very strongly developed the œdema remains insignificant or unnoticeable;—at other times when the anæsthesia is slight the œdema is marked, and generally speaking in its development follows the ordinary course from the lower extremities to the head.

In the old Chinese school of medicine as practised in Japan it has been usual to distinguish two forms of *Kak-ke*, the dry and moist, the latter form exhibiting some striking characteristics which depend on dropsy, but without any essential difference.

Besides this, in the absence of dropsy of the skin the more remote internal tissues become more or less saturated with serum and the cavities of the body are filled with serous fluid. Œdema of the skin may also present itself

\* The common Japanese shoes, or rather sandals, are merely soles fastened on by means of a stout, soft cord which is passed between the great and the second toe and is attached to either side of the upper part of the sole behind.

sometimes at a later stage of *Kak-ke*, and disappears without any diminution of the other symptoms of the disease.

Generally speaking the dropsical effusions in the course of their development follow the ordinary course from the extremities to the head. In cutaneous oedema it may happen that the face is greatly affected while anæsthesia, on the other hand, in comparatively frequent cases spares the head. Collections of serum are frequently observed and in all stages of the disease, and are likewise independent of the diffusion and force of the dropsy. These spread sometimes with great rapidity and attain such extent in the pleura in from one to two days that the lung affected becomes perfectly devoid of air. These collections of serum occur with comparatively most frequency in the pleural sac (usually on the left side in such cases as have been observed), next in the pericardium which becomes so full that it presses upon the left anterior wall of the thorax. They are seldom present in the peritoneal cavities, and even then are only observable in a small degree.

Clearly marked oedema of sharply circumscribed portions of skin is remarked as a dangerous symptom in severe cases. These are sometimes only of the diameter of a small plate, but may possibly attain dimensions of from 12 to 13 inches. The surrounding skin is either unaltered or less oedematous than the already mentioned places. The seat of circumscribed oedema is usually in the neck which either entirely or partially is affected by it; further the parts between or above the shoulder blades and in the anterior and middle parts of the neck, and specially on the left wall of the thorax. It is rarely found in any other parts of the body.

In addition to these symptoms there is observed in many cases a simultaneous occurrence of oppression and palpitation, or if these have not been so far exhibited they now appear. They are often violent and obstinate so that other symptoms are less regarded by the patients. They frequently continue for days and reappear on the smallest effort or excitement on the part of the patient, and after a slight interval, and without any intelligible reason, reappear with similar intensity. In many other cases of *Kak-ke* the tendency to palpitations of the heart is not so intense, and even in the severest cases may remain relatively, whereas the feeling of oppression is generally in equal ratio with the sickness. But in these, as in all others and in even the slightest cases of *Kak-ke*, an abnormal tendency to palpitation of the heart is invariably observable.

Occasionally, though not in many cases, an intenseness of the palpitations is occasioned by superadded endocarditis. This usually appears attended with a slight feverishness, but with increased sense of oppression and of the palpitations. It attacks almost exclusively the left side of the heart. It is characterised by a systolic, dragging sound above the left ventricle, a sharp, grating noise being audible above the right, which is sometimes, however, accompanied by a more or less clear though comparatively weak sound. In addition to the peculiarly characteristic symptoms of *Kak-ke* a general sense of drowsy weakness is observable in the sufferers. Besides the indisposition to either physical or mental exertion which palpitations and muscular debility as well as giddiness and a tendency to swooning fits occasion, the patient shows a distaste for all pursuits and more especially for those which demand exercise of intellect.

The condition of the circulation furnishes also important matter for consideration in the investigation of this disease. While increased action and intensified excitement are observable in the heart, the pressure of blood in the aorta system is almost always abnormally slight and increases only on the accession of complicating fever. In many cases, and especially in those of copious dropsical accumulation, the arteries possess their normal dimensions and their pulsations are unusually high, so that, not unfrequently, the pulsations of the carotids are visible from far whether the pressure of the blood in the aortic system be diminished or not increased.

In connection with this obstructions in the venous system are very general, especially in the smaller veins, as may be recognised by their gorged appearance and occasionally also by the pulsations of the jugular vein, the bluish

colour of the skin and the mucous membra.

difficulty in respiration. In another class <sup>"A most Cape, DE."</sup> abnormally slight volume of the arteries accompanied by diminished aorta pressure, so that the radial arteries a thin, thread-like appearance and the extremities are public to the touch. The pulse preserves its normal state or only slightly increased, seldom going higher than one hundred beats in the minute, while during the palpitations it not unfrequently attains one hundred and forty in the same space of time.

Anæmia is a constant attendant of this malady in its advanced stages. In numerous cases it is entirely absent at the beginning, makes its appearance somewhat late, and even then is only exhibited in a very moderate degree. It is possible, however, that in the course of the complaint it may be developed to the very fullest extent.

Scurvy possesses no direct connection with *Kak-ke*. When it is met with accompanying the latter it is almost always proved to have been in existence prior to the outbreak of the malady. Nor does it after the outbreak of *Kak-ke* appear to have increased in degree of intensity.

When no complication of disease occurs the digestion and appetite retain their normal condition in the early stages of the complaint, and frequently throughout its entire course. In the severest cases, alone, does the appetite appear to fall off, and in such an intense thirst seems to take its place. During periods of difficult respiration, also, mastication and swallowing become either impossible or difficult, and in the later stages of the malady an adynamic weakness in the digestive power and a want of appetite accompanies the general prostration of the body. Catarrh of the lungs is seldom apparent in *Kak-ke*. In severe cases when they are overcharged with blood it may occasionally present itself in the form of a hacking cough, which throws off, however, only slightly frothy, serous sputa as the increasing difficulty of respiration occasioned by coughing renders the patient most anxious to avoid the action.

The kidneys, except in complicated cases—which however the author has never observed—remain unchanged. The quantity of urine is frequently unaltered and often slightly diminished, while its specific gravity increases correspondingly. In severe cases—which invariably terminate fatally unless energetically treated—a sudden diminution of the quantity of urine without any increase of its specific gravity is observable about one week before death. But neither in these, nor in other cases, could the presence of albumen be detected.

Spasms are not observable in the course of the malady. Immediately preceding death, however, the patient is often subject to a fit of convulsions. In a similar manner death is occasionally preceded by vomiting, either once or more frequently repeated, which does not occur in the earlier stages of the complaint.

#### PROGRESS AND TERMINATION,

All the foregoing symptoms are more frequently developed in cases of first attack than on recurrence of the disease. This, however, depends less on the disease itself or the constitution of the patient than on the usually quick relapse at a time when adverse climatic influences are comparatively unimportant.

The earliest cases of *Kak-ke* in the year, (almost invariably second attacks), are first noticed in places subject to the visits of the disease at about the end of March or beginning of April. In May numerous cases of first attack occur, and in June and July the list is largely swelled, the number of second cases in these months being relatively smaller. In August the new cases are by no means so frequent, although those under treatment at that time, as in July, present greater difficulties, especially when the patient is weakened by a protracted previous sickness. Many of the simplest, and frequently indeed, of the most difficult cases rapidly yield to proper treatment. But by far the greater number of patients bear the seeds of the malady as long as the hot season lasts, and it is easily reproduced by the slightest causes.

In September, or more frequently in October, the symptoms in many cases diminish, even without treatment, and disappear during the latter month or November. A slight weakness, often accompanied by anæmia, is all that now remains of the complaint and this too disappears in course

ns. In the more severe cases the cure is often incomplete. Insensibility and palsy degrees remain—occasionally even to the complete paralysis of the upper and lower extremities, with atrophy of the part affected. Sometimes anæmia and debility of the entire body with trembling of the limbs remain to mark the passage of the disease. The skin covering the part affected, and it may be said that of the whole body, remains for a long time thin and wrinkled, the skin peeling off freely. Accompanying these is adynamic weakness of the digestive powers and in its train a greater or less disturbance of the organs of nutrition; and finally a general marasmus occurs, which either late in the cold months or at the beginning of the warm season, proves fatal to the relapsed sufferer. As far as accidental derangements are concerned, remains of dropsical fluid, chronic degeneration of the pleura and pericardium, or attachment of their walls, are frequently observed.

The tendency of those who have already suffered from *Kak-ke*—a tendency which stands in ratio to the severity of the attack—to take the disease a second time is a fact which should receive especial notice. These second attacks usually occur at about the beginning of the warm season but can generally be prevented by a change of air. It is remarked that few second cases occur in localities known to be free from *Kak-ke*, and even those which do occur take usually a mild form. In not a few cases *Kak-ke* terminates in death. The limited means of acquiring statistical information upon the subject at present, and more especially the narrow field to which the author's observations have necessarily been confined, will only permit of an approximate statement. It would seem that at least one tenth, or it may be even considerably more, of those afflicted with the disease fall victims to its ravages in the absence of suitable treatment.

The symptoms which indicate danger reach their climax sometimes gradually and unobserved. They frequently appear suddenly, and in such cases are usually soon followed by death. They are often preceded by prognostications which are easily overlooked, but may be detected by careful observations for days and even a week before hand. Circumscribed oedema of the already mentioned parts of the skin exhibits itself as the first symptom. On the first exhibition of the symptoms the arteries, already diminished in volume, become gradually thinner and finally filiform; the pulse, which is correspondingly feeble and occasionally scarcely perceptible, grows more frequent and beats with unequal pulsations. The contractions of the heart become weak and powerless, the patient experiencing at the same time sensations of painful palpitations accompanied by pressure and tension in the region of the stomach and bladder. During the growing severity of these symptoms swooning is of frequent occurrence and fainting and loss of consciousness accompany the slightest exertion; the temperature of the body decreases, principally in the hands and feet; the colour of the skin becomes very pale and the flow of urine, already greatly diminished, either ceases altogether or is with difficulty voided. These symptoms, which sometimes continue without circumscribed oedema, may last for some days or even for a week, and death at last terminates the sufferings of the worn-out patient who passes away in a state of unconsciousness.

In cases of extreme danger the disease assumes an essentially different shape. In such cases the patients are more or less plump though flabby, and only in the slightest degree anæmic. The symptoms are copious accumulations of dropsical matter under the skin and in the cavities of the body; an increased temperature of the body; a swelling of the arteries as also obstructions in the venous circulation. Palpitation and oppression of the heart of various degrees of duration and strength are also observable.

Without any other peculiar symptoms and frequently with a diminution of the subjective pains, more especially the palpitation and oppression, a diminution of temperature of the body of  $\frac{1}{2}$ — $1^{\circ}\text{C}$  occurs so that its warmth falls below its normal condition. A falling off in the secretion of urine occurs simultaneously, its quantity being reduced from 16–24 ounces to 6–8 ounces in the 24 hours. This lessened quantity, which does not exhibit any increase of specific gravity, continues for several days although

the condition of the patient exhibits no change. Suddenly, however, and generally about three days afterwards an increase of the dropsy, whether hitherto slight or extreme, sets in denoted by the appearance of more strongly marked oedematous circles on the skin; a difficulty in breathing is experienced and the pains and palpitations become intense. The carotid arteries begin to beat visibly, or the already visible pulsations grow stronger; the skin becomes blueish and the abdomen is swollen and distended. The voice is altered as if the mouth were full, the speech is difficult and the words appear unintelligible, low and broken. A crepitating noise may be detected in the lungs and occasionally a serous, foaming sputum is discharged. A sense of burning thirst is experienced which, however, the increased difficulty the patient finds in breathing renders it impossible to satisfy. In one or two hours and frequently in a much shorter time these symptoms attain considerable proportions. The countenances of the sufferers, of a pale or blueish hue, betoken the sense of suffocation which they experience. They lie with raised body upon their backs, being unable to endure the pain of lying upon the left side which occasions suffocating pains and palpitations; nor is the position on the right side long or easily borne. They breathe with the greatest effort, frequently with open mouth, and calling into exercise all the muscles. The patient tosses about uneasily on his couch, grasps his neck and breast convulsively, endeavours to raise himself upright and soon sinks powerless and exhausted by his efforts. Meanwhile a fit of vomiting occurs during which he discharges a slimy, watery fluid which is once or twice repeated shortly before death and is usually copiously mingled with gall. Simultaneously with this the arteries contract and the pulse grows feeble. The colour of the skin covering the extremities becomes blue and the difficulty in breathing more intense. The face and the throat are distorted and convulsions of the extremities are observable. These are succeeded by vigorous efforts to breathe at irregular intervals which ultimately terminate with a discharge of foam from the mouth and, with a long-drawn breath, the patient expires.

Several days may elapse between the presentation of the symptoms of oedema and the death of the patient. This event, however, most commonly occurs in less than twelve hours. Death does not always arise from suffocation, as in many cases the heart ceases to perform its functions before the approach of that stage. In these cases the palpitations of the organ become prominent symptoms and are so intensified by dyspnoea (which is also present) that the pulsations of the heart resemble the blows of a hammer against the inner walls of the breast. Notwithstanding this powerful action the ventricles are not active; the radial arteries become very soon thread-like, the pulse quickly declines and the skin grows pale. The sense of pain on the part of the patient and his restlessness increase in like measure. Generally speaking, the approach of death is sudden from cessation of the action of the heart though this is most frequently preceded by fits of vomiting.

In the most rapid cases only a few minutes elapse between the commencement of these violent palpitations and death: usually, however, some hours pass before death occurs. A change in the form in which death from palsy of the heart presents itself may (as the author has had an opportunity of observing) be occasioned by excessive dropsy of the pericardium and the left pleural sac. The symptoms already noted as immediately preceding death, such as difficulty in breathing, the sense of suffocation, palpitations, &c., &c., are in such cases also the most prominent. The immediate cause of death is not, however, the sudden paralysis of the heart, but the absence of power of diastole.

Climatic causes exercise a considerable influence in the circumstances attending deaths from this disease, which would seem to take place most frequently in close, sultry weather when rain is prevalent. In such weather the most distressing symptoms are usually first presented.

The occurrence of anæsthesia would seem to possess no peculiar importance at this period of the disease, yet an unknown unfavourable influence over the nerves of the heart may indirectly result from its supervention. On the other hand, great bodily exertions become the cause of death in severe cases of *Kak-ke*, as can be veri-

fied in the case of a young man formerly greatly weakened and partly paralyzed by a previous attack of the disease. In this case a great increase in symptoms, which had only been slight, followed immediately upon a severe effort; and as after slight recovery the same effort was repeated a few days subsequently, the fatal symptoms immediately made their appearance, and death ensued in two days with the symptoms of paralysis of the heart.

#### JAPANESE NOTES.

Notice is hereby given that the accompanying newspaper regulations have been established.

Rules regarding the establishment of newspapers.

**RULE I.**—Every issue of a newspaper must be marked by its proper number.

**RULE II.**—Supplements must be marked with the number of the issue to which they belong.

**RULE III.**—No supplement may be issued if a number of the paper is not issued along with it.

**RULE IV.**—When the official seal of authorization has once been attached to the letter of application, it is unnecessary to submit each number of the paper for inspection.

The application should be drawn up in the same form as that for permission to publish a book.

**RULE V.**—Every number must have printed on it the year, month, day and place of issue, and the names of the editor and publisher.

**RULE VI.**—When printed, one copy must be sent to the Department of Education and one to the local Government office.

**RULE VII.**—In case they have no bad tendency, the following subjects are admissible.

Extraordinary natural occurrence, fires, war, prices, produce, trade, births, deaths and marriages, official notifications, literature, manufactures, amusements, clothing, land and houses, translations of foreign writings, miscellaneous foreign news, and other unimportant public matters.

**RULE VIII.**—Papers, correspondence, miscellaneous paragraphs, etc. sent to the paper may be published if they have been authenticated with the writer's name.

**RULE IX.**—No newspaper may be established without official authorization.

**RULE X.**—It is prohibited to attack the constitution of the Government, to discuss the laws, or to cast obstacles in the way of the working of national institutions by the persistent advocacy of foreign ideas.

**RULE XI.**—It is forbidden to append uncalled for remarks to the laws etc. which are published in the papers.

**RULE XII.**—Moral teachings must not be introduced in such a way as to injure and obstruct the Government.

**RULE XIII.**—It is forbidden to disturb or demoralize the minds of the people.

**RULE XIV.**—It is forbidden to denounce a man for crimes on the faith of groundless rumours.

**RULE XV.**—Editors must not take it upon themselves to publish remarks upon officials during their term of office, or their official conduct or even anything, however trifling, which is connected with our foreign intercourse.

This prohibition does not extend to documents which have already been notified publicly, or for the publication of which an official order has been made.

**RULE XVI.**—All errors which may have been made must be rectified.

**RULE XVII.**—The editor is responsible for giving explanations in regard to any matter upon which it may be necessary to question him.

**RULE XVIII.**—Any persons infringing the above regulations will be punished according to law.

#### Extracts.

##### A REPLY TO "MACAO AND ITS SLAVE TRADE."

Labour questions in general seem to be a great source of public uneasiness both in England and her colonies. Among the many topics that have lately engaged the attention of the English nation, and been discussed in their press, there is one that has returned again and again in an intermittent way, with increasing earnestness and force. The great movements of European and American politics might for a time smother by their overwhelming interest every other question, but it was only for a short time; when the shadows passed by, English attention was again rivetted on the old subject. The overthrow of European equilibrium, the struggles of powerful races, the Brennus-like Alabama indemnities, the growing anger of the American nation, the keenly-felt dagger of Russian invasion ripping open the entrails of Asia,—all of these have not been able to divert permanently the attention of England from the *Macao Coolie Trade*.

This wee little Macao, which I have seen geographically described in a hundred newspapers to the ignorant Cockney (who must have a very loose memory, as according to what I have recently read, Macao is a scarcely known place)—this insignificant Colony, as some English writers disparagingly style it, seems to be pointed out to the vengeance of the mighty powers of the earth and to the ire of the gods as the modern "place of abominations," a new and more dreadful Gomorrah, the place of infamous traffic, and the scum of the earth. Indeed, the earth seems to suffer a kind of moral cutaneous disease of an erratic species. The ulcer appears here and there, and only disappears in one place to break forth with equal virulence in another. Former ages were full of the infection of Babylons, and Carthages and Romes, and now after so many centuries, it seems as if all the constitutional venom that has been for a time quelled, has founded for its manifestation a convenient spot in this poor Macao that is to rank with the grand ulcer-towns of history;—a kind of Satan-like honour, though still an honour.

These last words I think would not be adopted by the strict Englishman, who would, however, endorse the above classification. We should nevertheless make our most even of insult and evil, and if we are devils, be true and great devils and deserve to be called so. Such is not—whether fortunately or unfortunately I cannot tell—the case with our miserable colony of Macao; poor thing! she is not so very bad; and I think that she might sit with Spa and Baden at the table, and would not frighten out of their wits the high-crested prudes of Europe if they were but to look at it without hatred-magnifying spectacles. Believe me, Macao is not so bad as you think—not so much so as many good and honest people think. It is not good; I would not set the slightest wager on its goodness, but if its morality were to be weighed against the morality of any other nation, who can tell what would be the waverings and oscillations of the fulcrum?

To come now to the discussion of the point to which this paper is particularly directed, I must firstly explain what I understand to be the English accusations against Macao. I must call, first, your attention to the purely and exclusively English character of the aggressive course lately pursued against Macao. It is not the French, nor the Germans, nor the Americans, nor the Turks, nor the Swedes nor any other nation; it is England, alone, who under the disguise of such European flags as may please her, worries Macao. I would say the Coolie Trade instead of Macao, if the article called "*Macao and its Slave Trade*" were not a clear symptom of a turn of public opinion directed against Macao; now with the coolie trade as a pretext, to-morrow with anything else that will be as good a pretext. This is indeed a very bad feature in the war that has been waged against the coolie trade;—that this war should not be directed solely against that trade! It may be supposed that such system is restricted—I firmly believe it is—to the author of the article under notice and a few others of the same stamp. But from a small spark a great fire sometimes ensues, and although I do not too greatly admire Macao, I am sufficiently the well-wisher of the English nation to desire for the sake of her honor that she should not strain her enormous energies for the destruction of this small Portuguese Colony.

If it is the coolie trade only that is to be destroyed, I think that you will find many Portuguese in your camp. You will find me. If it is a wanton aggression on Macao itself, as a reprisal for supposed ancient grievances, whose causes and effects have long since ceased to exist, you will not only have every single Portuguese, good and bad, moral and immoral, against you, but you will have equally to meet the reproof of that honesty that is altogether incompatible

political policy. These will appear small obstacles to the right, but England should not sow a harvest of hatred; there is no room for such a harvest; and it is a harvest of terrible abundance. It appears to me, however, that such arguments that might more properly be used against the English author of *Macao and its Slave Trade* must sometimes be applied to the whole nation itself. As we have seen that notwithstanding the excessive prudence and foresight of her great statesmen, the English nation overlooks too much the small and trifling, and sometimes forgets the axioms that sentiment has nothing to do with size, and that sentiment is always a very powerful agent. It is never good policy (the only good policy being honesty) to insult and wound the feelings of any one; it is not even good manners. An enemy is always an evil, and it is absurd and foolish to create enemies by insult, even if they are small and weak. It is an error to induce hatred in times of peace. War itself ought to have but little of hatred in it, and verily what we call civilised warfare, is simply victory and defeat without the useless barbarities of humiliation and cruelty that blind hatred is always ready to prompt to uncivilised warriors.

We hope that England will keep, for our benefit, some of that tenderness for national rights of independence that was so conspicuous in the case of the Khan of Khiva. We know we are poor sinners, but it is not presuming too much, I trust, to believe that the Portuguese nation should be at least as well treated as an Afghan tribe.

You may here remark that I am thrusting my pen into a shadow, and that England entertains not the faintest idea of high-handed dealings with any Portuguese possessions. Very true, it is a shadow; and for that only it is that I use my pen. I have read in an English poet (Campbell) a fine line about shadows, and since that time have been dreadfully afraid of them. The idea of their being the forerunners of coming events is quite enough to frighten me. If you only attack the coolie trade, why should you revile the whole of the Portuguese annals since the beginning of the world, if possible, down to the present day, and ask for centuries more, to revile more? Alas! Portugal and the Portuguese have been a shame to that high standard of morality and civilisation that is to be seen in the Cathay of Marco Polo and Ibn Batuta, and in the story of Petit-Poucet, as well as in the chronicles of the great master Alcofrabas.

Those bad Portuguese were rough no doubt. A great amount of roughness was wanted to stand the rough ocean that they vanquished, and they found in their way many lethargic putrefying nations; they were practical men and rough men, and although they did not handle the Chinese with exactly the same tenderness that is to be noticed in the foreign employes of the Chinese Customs, it is beyond the truth to say that any Asiatic nation was unjustly dealt with by the Portuguese.

I will not dig up the inhumanities of English rule in India and elsewhere; I will not say that the condition of India during the reign of Aureng-zebe was preferable to the present state of the same country under the government of Lord Northbrook. No. It would be mean to hold up the apparent and necessary evils of social transformation to national opprobrium.

I will not invoke the memories of heroes now at rest, after spending their lives in stout work for the progress of the world, and for the good of humanity. In a blaze of glory they stand in eternal remembrance, having performed their duty as the great workers of the world. Lord Clive, Sir Henry Lawrence, Warren Hastings, the Wellesleys of great England stand together with the Gamas and Albuquerque of small Portugal. They are crowned with an equal crown, their names have won an equal renown. Where is the man that will have the miserable courage of imputing a stain to the pure, blame to the blameless? Where is the apostle of old Cathay and the accuser of Gama and Albuquerque? However, let differing races rest in peace. There is good in every one of them and all are doing something for the consecration of the better future of humanity. It is unfair to despise any race and any nationality, but it is more than unfair to call the Latin race harsh names—especially after Sedan. In the paper entitled *Macao and its Slave Trade*—one of the most violent diatribes on this overworked theme—I find hatred and detestation of the Latin race, of the Portuguese destiny, of Macao, and lastly of the coolie trade. What terrible rage! It must be a phobia, unknown before, that involves in its objects of aversion, water, land and man. I need not trouble myself about the remedy; I think it useless to try the value of arguments to demonstrate that the Latin race has been to the present day the salt of the world, that Portuguese history comprehends one of the grandest strides of progressive humanity, and that the town of Macao is

a most respectable Colony, and one that a nation may well be proud of.

In condensing the substance of English accusations against the coolie trade, I refer of course more particularly to the paper already quoted in the *Review*, notwithstanding the many excellent writings that have preceded it on the same subject, because that paper condenses in itself the substance of everything that was said before with more moderation, adding the bitterness of a special animosity not seen before. I consider this article as a summing up on one side of the question.

In one point the writer of the article and I myself agree—in our common detestation of the coolie trade; a detestation on my side so strong that I can well speak of it, absolutely and relentlessly, without the least tendency to compromise. There is not one single faculty, one single sentiment in me, but rises up in protest against slavery of any kind, in any disguise—slavery in my own dearest country—slavery in Europe, in Asia, in Africa, or in America. There is only one word to express and condense the sufferings of the world, that word is slavery! And I do not only mean that species of bare-faced slavery by which a man is deprived of his liberty through bargain, in which he is the object and not the agent; I have also in my mind the servitude that is produced by the disequilibrium of the demand for any supply of capital and labour. Eternal slavery this perhaps, and the world may be doomed to suffer and writhe under the iron grasp of an economical disequilibrium; but our protest must also be eternal, and it is good that man should not reconcile himself to wrong and evil because it seems fatally perpetual.

We find, in the same predicament as the European *prolétaire*, the heathen Chinese. We must think of him too, not the less that at home our hearts are naturally hardened by a constant monotonous vista of misery, where a perception of the horrible is gradually substituted by a milder sentiment of disgust, where the gin-smelling, tattered, unconscious, poor drunken wretch moves our anger (if we are not the ginsellers) and not our pity; where the idiotic miserable pin-maker is looked on by the elegant visitors in the factory as less than nothing, and by lord of the factory as so much work, or something that has not, unfortunately, been yet superseded by a contrivance of iron wheels and straps. There is something new in the Chinese *prolétaire* that stimulates our fastidious humanity; opium is a novel substitute for gin, and we pity the poor inebriated Chinese notwithstanding our being the opium-sellers. Where is the tear of such pity to fall: to what account does eternal justice put down such woeful kindness?

In these remarks I do not allude especially to England. There is a kind of hypocrisy more disgusting still than the hypocrisy of certain English pseudo-humanitarians; and that is Portuguese hypocrisy about the opium trade. Portuguese sell as much opium as they can and are very sorry they cannot sell more. They began the trade (thank us, now, Englishmen), and it was wrested from their tenacious grasp only by the conquest of India and the victories in China. Now, how dare we speak of English crime in selling opium without looking at ourselves? It is true that a criminal may give testimony against another, but it is not a *beau rôle*. However if we had altogether changed our moral nature since the days of our flourishing opium trade, and were now quite incapable of such enormities, I think we might honourably accuse the English opium trade; but this is not the case, and if only we could do it, we would as mercilessly as any other mercantile nation poison and re poison the whole Chinese nation—nay, mankind itself (the sellers excepted)—for as many dollars, and think no more of it than of getting a good bargain. We are no better than others, and unfortunately for the world, others are no better than us, and sometimes are worse.

We shall work together, nevertheless; we shall work for the same master at the same work; we shall run the same course for the same goal, and one of us will do it honestly if not strenuously; it is to be hoped my companion will do it both honestly and strenuously.—I mean the writer of the article *Macao and its Slave Trade*—and the work to be done is for us (as well as for many others) the extirpation of an inhuman trade in human beings, a moral as well as a social reform. But I am sorry to say, that, according to my own personal views of the question, the writer alluded to has done but very poor work in his article; and although the bullet of his argument is shot off by the gunpowder of numberless prior publications, the harm done to the coolie trade fortress seems not to be very extensive.

More than half of the article entitled *Macao and its Slave Trade* is intended to revile the Latin race, European intercourse in the East, Portuguese discovery, and Macao! How all this weakens the effect of the blow to be dealt on the coolie trade! What lamentable strategy, how wrongly directed such efforts are! Indeed it must be

very gratifying to coolie-traffickers to see that their ignominious trade is condemned in the same breath with the highest and noblest periods in history. England has done much for the civilisation of the world, notwithstanding the adventures on the Spanish main of men of Sir Henry Morgan's stamp; I will say that such phases in history, though much to be deplored, were the necessary evils that afterwards disappeared with the march of progress. The work of progressive epochs is the destruction of evil, and it would be very unphilosophical to describe as immoral any period because of those evils that were ruthless conquerors. (I think the Wertherian conqueror is only to be found among those great men of Chow and Chew that ruled as paternally as possible during the "dim ages" of yore). The Portuguese were indeed a hardy race, who fought and discovered in times of no European equilibrium or Colonial jealousy (great props for savage and barbarous countries), in times of faith and of political sincerity. In the China seas they met the most lawless gangs of indigenous pirates that could well be imagined, and these they destroyed. Read in Fernan Mendes Pinto the exploits of Antonio do Faria, the daring rover that plundered the tombs of the Emperors of China, and you will acquaint yourself with a sort of Morgan, on the whole more worthy of a hero's laurel than of a gallow—two things that nearly touch each other after all. Nevertheless the Portuguese opened Asia; that is a great fact, and they did not open it with undue violence. They did not show that lust for universal Asiatic domination that is so conspicuous in English history, and they had not for their subjects men who shewed the utter disregard of right that characterised the dealings of the former East India Company.

You may understand the general policy of Portuguese enterprise in the East by referring to the chronicle of the discovery and conquest of Guinea by Gomesannes of Azurara, written about 1453, by a man who was a personal friend of Prince Henry the Navigator. If you prefer a modern writer, I would point out a very good authority and an English one too; see "Prince Henry the Navigator," by Mr. Major—an admirable historical work that I read some years ago with great pleasure. The chronicle I have just mentioned is however perfectly clear on the subject of Portuguese motives, and I cannot resist the pleasure of transcribing the words of the venerable book; it seems to me that Prince Henry himself speaks through the centuries to justify and cleanse his nation and his age of the slander of the ungrateful and ignorant:—

"The Lord Prince had five reasons for the discovery of foreign countries. As the lands south of the Canary Islands and of a cape called Bojador were unknown, and as, although St. Brandon was said to have sailed thereabout, no reliable information was received, the lord prince was determined to ascertain the truth about these regions, as it appeared to him that if he or some other lord did not attempt the discovery, no mariner or merchant would try the venture, as it is quite clear that such persons only will navigate to places where they can reap evident profits; observing that as no other lord dared to do this deed, he sent his own ships to the unknown seas. This was the first reason:

"The second reason was that he thought that perchance some Christian country might be found with which friendship and commerce might be established.

"The third reason was that he wanted to know the true extension of Mussulman power, his born and sworn enemy.

"The fourth reason was that during the thirty-one years that he that he had waged war against the Mussulmans he had never found a single Christian prince that would help him for the love of Jesus Christ; and he might find in the undiscovered world some Christian power that would be his ally.

"The fifth was the great desire of augmenting and increasing the faith in our true religion (p. 47.)"

These were the motives under which the world was discovered; the grandest of all that can move mankind to action. Honour itself breathes in the words of the old Portuguese navigator; honor, bright, loyal, disinterested, brave. Those words were the great *sésame ouvre-toi* of the world; they bore the almighty spirit of civilisation round the orb to awaken slumbering races and resuscitate dead nations. They brought separate communities together and began the assimilation of mankind to mankind. Let us not blaspheme these words, let us not blaspheme the Portuguese nation that thought and uttered them, and that did the deed! Honour and glory be to the nation, wee and small, that walked the world in three strides! A celebrated historian and statesman of the sixteenth century, Guicciardini, who ought to have been adverse to the Portuguese nation, he being an Italian and a loser by their exploits and discoveries, speaks of them with admiration and wonder in an eloquent passage

of his History of Italy (edit. Bondry, vol. II. p. 315). "A most marvellous navigation," so he terms the passage round the Cape, "to a distance of sixteen thousand miles, over seas quite unknown previously, under other stars in other climates, with new instruments, because after passing the equinoctial line, the North star was concealed, and during such an immense passage they could not touch to land, but found strange people different in language, religion and usages, quite barbarous and exceedingly inimical to foreigners!"

The writer of the article on *Macao and its Slave Trade* may rest in peace. We, the Portuguese, owe him no grudge.

I have put in a word in favour of the Portuguese nation although this nation scarcely wanted it, because the ignorance of history and geography that prevails among some persons who nevertheless write on this subject is indeed very great, and such persons are prone to spoil a great deal of able writing by their very erroneous notions.

I proceed to grasp more closely the Macao question, and, to do it with better efficiency, I must say a few words about the history of that colony—a very much ignored and in itself obscure history. It might by this single symptom, be considered, *à priori*, as the history of a period of peace, tranquillity and happiness, with no other record but that of uninterrupted peaceful commercial intercourse.

There was indeed a period of hostility. The first Portuguese ships that came into the Chinese main were attacked exactly as were any boats of peaceful commerce (it is doubtful if there were any in those times). Retaliation ensued, and it was only when Chinese piracy was kept in awe by the superior force of Portuguese navigation, that Portuguese merchants were able to carry on a quiet trade. There is in Portuguese and Spanish history a feature that greatly influenced its maritime and Colonial policy, and that is easily overlooked by the English reader;—I mean the peculiar sentiment and national tone produced by the constant warfare against Mahomedanism; a war of fatherland, of religion, of race, and of civilisation. The Moors fought the duel bravely and were only driven away inch by inch, year after year, from the soil of the Iberian peninsula. The duel was continued beyond the Strait of Gibraltar, and you have seen that Prince Henry sought to continue it in every part of the world. England continued it effectually in India. Such an antagonism, bracing and fortifying the energies of the Portuguese nation, must have produced in it a great amount of intolerance towards different races and religions. Add to this the lawless condition of navies, and the constant state of war between Christian and Mahomedan ships; you will have the principal causes of the supposed excesses committed by some of the first Portuguese navigators. After the first and necessary struggle between the Portuguese discoverers and the Chinese maritime independent chiefs (pirates, new style), the Portuguese settled down quietly to enjoy the benefits of traffic. They did not wage war on the Chinese Empire, they simply assured their maritime and commercial interests against the depredations of Asiatic fillibusters, and waited, and sued for nothing else than peace. That peace, tranquillity and harmony which endured so many centuries began to be troubled by the intervention of English interests in the East; it was quite destroyed by the coolie Trade.

There are some facts in the annals of Macao that break the quiet uniformity of its existence. The most prominent are the Dutch invasion and the English intrusion. It has been considered a strange fact that the Dutch should be beaten by the Portuguese at Macao. I do not think it so extraordinary, as the Portuguese have vanquished many other nations during their long and glorious history.

When the English, Dutch and French entered the field, the Portuguese could not understand on what right these upstart navigators grounded their pretensions to Asiatic and American domination. These new-comers, who tried to violently displace the Portuguese and Spanish from a situation that they thought to deserve by rational right and even by divine intention, were considered as pirates and common robbers. It was not a *dog-in-the-manger* policy, it was to a certain extent a protest of right against might.

The English and Dutch played, at all events, the part of the *dog-out-of-the-manger*, and I think that after all the dog in had a right that cannot be discovered in the dog out. Any rich man is a *dog-in-the-manger* for the poor man, and this argument is a most favorite one among all sorts of socialists. I don't care to prove that it is no argument at all.

There is no doubt that the Portuguese at Macao tried very hard but very ineffectually to prevent their monopoly of trade from passing into English hands. I lament the want of foresight, and the intolerance of the Macao merchants that nearly effected the ruin of a

prosperous colony, but the fault was the fault of their times, and they had not among themselves any political or commercial genius to prepare a better future. I think it most unfair to upbraid and insult the Macaese, because they did not adopt a better plan for their self-preservation than that of keeping away competition; a wrong notion of which all Englishmen are not yet quite free and that works some mischief even to the present day at Hongkong. The municipal autonomy that the Macaese preserved during the greater part of their history (that may well be compared to the political status of some of the towns of Italy in the sixteenth century) was one of the principal causes of the erroneous policy at times pursued. The so-called senate, being composed of merchants highly interested in Chinese commerce, generally made political dignity subservient to commercial convenience.

They had, after all, a right to do how they pleased, for the foundation of Macao was owing solely to the warlike and adventurous genius of a few merchants, without any sort of aid from the Government of the mother country. These merchants settled here in the same way as the Greeks on the coast of Asia Minor. When the importance of the settlement increased, the merchants for their security tied the first bonds of vassalage between Macao, and the Portuguese Government understood that a new jewel had been added to the colonial crown of Portugal, but the Macaese were not satisfied with having the protection of the Portuguese flag; the great distance in which they stood from the metropolis and the uncertainty of receiving succours of any kind did not inspire them with a sense of security from Chinese aggression, and they consequently endeavoured by all means to preserve, by prudent allowances to Chinese pride, the short of friendship that could be bestowed on barbarians by the "Son of Heaven."

From this political *quid pro quo* a twofold domination was apparent at Macao, and the Chinese as well as the Portuguese claimed to assert their rights to its sovereignty. The true sovereign was, by the by, the Senate that yielded to one or to the other according to its commercial conveniences. The senate accepted either the Governor or the mandarin as best suited its interests, and it happened that, during the bright epoch of Macaese municipal rule: these seas were delivered by them from piracy, commerce was carried on most honourably and the interests of Christianity were promoted. But the energies so conspicuous in the first enterprising Portuguese merchants, their spirit of organisation, and their prudent tenacity, were gradually and rapidly fading away; converts from Malacca and other places under Portuguese rule, belonging to the Malayan race, took the place of the extinct pure Portuguese generation, and the weakness and imbecility of the following senates gradually brought the Colony to the verge of a suicidal destruction; an insensible destruction caused by the merging of the Macaese natives (never more renewed in their Aryan characteristics by the ingress of new generations of Colonists from the metropolis), into the over flooding Chinese population. The senate would in the most unfelt and quiet manner have transformed itself into a mandarinical synod if Governor Amaral had not come in time to sweep away mandarins and senates.

Thus the victory remained to the metropolis, and Macao came finally under the undisputed rule of the best and most civilised of the three competitors to its domination. After all, it was not a very rich prize. The trade that could enable a prosperous town and community to subsist and thrive on the barren rocks of this small peninsula, must have been essentially a monopoly. The English intervention in China affairs, so much resisted by the Macaese, took quite a different direction from that which would benefit the Portuguese Colony. The English, disgusted by the want of sympathy they had to contend against at Macao, conquered for themselves a much more profitable situation on the China coast. Macao sank and in her hopeless insignificance and misery was tempted by the *Coolie Trade*. If there be a nation that can prove a history of immaculate purity, traditions of honourable self-sacrifice without the least concession to momentary interest; if there be a people that has not for a moment departed from the narrow and difficult road of strict morality, that as preferred even destruction to an infringement of their recognised code of morality, let that people and that nation throw the first stone at Macao for its *Coolie Trade*. I am sorry to say that England has not a right to do it, although she has the might. It is sad to see that, in their indignation against the Coolie trade, our English fellow-Christians have such uncharitable feelings towards this old Colony, the first point of the application of European progress to China! What vandalian longings are perceptible in all those elaborate articles that have been stirring up public opinion of late against the Coolie

trade! Those ungenerous feelings are not worthy of people who pretend to advocate the high cause of the liberation of mankind. A one-sided sympathy is worse than no sympathy at all. Antagonism is the blinder and more ferocious when stimulated by a limited and short-sighted sympathy. I think that notwithstanding its present glaring defects and its former exclusivism, Macao more deserves the sympathy and respect of any civilised English-men than the whole Chinese Empire. I do not mean, that such sympathy and respect should quite smother the repugnance against the Coolie trade, but it ought at least to silence those savage expectations of annihilation, and exulting predictions of ruin, that are so shockingly repeated in the English press.

It is very certain that, notwithstanding the actually clear perception we have of their errors, the Portuguese statesmen who failed to check the Coolie trade in its beginning are not to be blamed, as they were not obliged to be endowed with extraordinary political and administrative genius, and nothing short of the most perspicuous foresight would have been able to discover the evils that would arise out of an apparent source of riches and prosperity.

A blind adoration of Mammon is very often a great obstacle to the progress of nations; it has done no good to Macao. On the whole the policy adopted by the Portuguese Government about Chinese affairs as a part of its general Colonial policy, has been remarkably weak and ignorant. If it had not been so, the sickening decline everywhere to be seen in Portuguese Colonies would not have taken place. It is the work of the present generation to try to regain an honourable footing among civilised colonial countries, and I think that we deserve something else than contempt for efforts, obscure, but unquestionably meritorious.

When the metropolis found that Macao, instead of having a deficit in its revenue, appeared loaded with the golden bags of a round surplus, she did not care to inquire as to the economical value of the source of such a surplus, looking from a distance on the Portuguese flag floating on her Chinese Colony could not well perceive the large spot spreading over its immaculate whiteness. It is unfortunately a sad truth, which it would be unworthy of any honest man to try to conceal, that in the beginning of the Coolie trade the Macaese perpetrated the greatest atrocities. The alarm was first raised by the Jesuits. It is a terrible truth, now, that a law was passed for the expulsion of these ecclesiastics after their discovery of the most infamous Annamite tragedy! I would think myself unworthy of the honour of being a Portuguese if I permitted my pen to write one word of indulgence for the set of reckless, ignoble, cruel and infamous kidnappers and pirates who tried to conceal their deeds under the shelter of the Portuguese flag.

The Coolie trade showed the symptoms of a formidable disorganisation in this Colony, and it was only when the attention of the Portuguese Government was drawn forcibly to this extraordinary circumstance, chiefly by the English press and Foreign Office (another sad truth), that some attempts were made to stop the evil. Regulations were framed, and officials sent from Europe to carry them efficiently into execution. An effort was made to stop the evil, but it was impossible to uproot it. The Coolie trade did not meet that sort of moral condemnation that it deserved. Society did not shun and repulse avowed kidnappers, and the men who were practising all sorts of infamies in man-stealing, after being duly condemned to heavy fines by our tribunals, were not the less admitted to free intercourse with so-called good society, and intrigued and slandered those honest Portuguese officials who had brought them to punishment. These unprincipled rogues exerted a kind of domination over the quiet honest Macaese, and carried on a system of bullying that established their preponderance in the Colony. The domination of the *canaille* had no check, and I dare to affirm that no representative may be elected at Macao for the Cortes but he who has the favour of the barracoons.

The article *Macao and Its Slave Trade* contains a part of the truth on the Coolie-trade. It is not in the short space that is to be occupied by this paper that I can describe, even in a *resumé*, the different acts of the Coolie-trade tragedy. I will try, nevertheless, to illustrate, on this topic, the observations, many of them grounded on truth, that he makes on the Macao mantrade.

The first question that arises in the analysis of the Coolie-trade business is, How are the coolies made to come to Macao in such numbers? How is it possible to kidnap annually about forty thousand men, able-bodied and strong? This is a phenomenon that seems quite unparalleled in any other country, and we only meet something to be compared to it in the great pigeon catchings and in herring fisheries in America. It must be remarked that in China, both with the people and the officials, everything is a question of

price, and China itself is to a great extent the coolie catcher for the American labour market. The clanflight prisoners, the people who can be caught and sold more or less clandestinely by mandarins, the people captured by lorcheas with one or two Macaese on board, these are verily the men who fill up the Macao emigration barracoons, but there is also a fair proportion of willing emigrants. Actually, the kidnappers have a terrible enemy in the superintendence office, and they have tried to turn the difficulty, by very clever and effective strategy, working hard to put a kidnapper in office. I have no doubt but they may succeed some day, and then let Annam take care of itself!

The men who embark at Macao as contract labourers may be separated into these classes:—

- 1st. Comprehending people captured by actual physical violence.
- 2nd. People captured by moral violence.
- 3rd. Willing emigrants, ruined agriculturists, fugitive criminals, gamblers.
- 4th. Pirates who embark with the premeditated intent of plundering coolie ships.

Every one of these men, even when willing to emigrate, is virtually sold, under cover of more or less disgusting sophisms.

The proportion of men belonging to the first and second class has been reduced to a minimum since the framing of the emigration regulations, and the number of men that are sent back to their homes by the superintendence is a proof of the large amount of artifice and roguery that is constantly being destroyed by means of this truly humanitarian office. During the last four years about 15,000 men were repatriated! The question arises, How did they come?

But although the Portuguese Government has done everything in its power to ascertain the willingness of the emigrants, it cannot, with the actual organisation of the coolie trade, prevent the coolie from being sold exactly as a chest of opium, the only difference consisting in mere formalities. I know, by personal examination of the facts, that actually the large majority of Chinese labourers shipped at Macao are willing emigrants (however sold), but it is also a fact that the kidnappers have not at all abandoned their ugly practices. They know that the obstacle of the superintendence is simply the obstacle produced by some honest officials, and that if such an entity can be removed, the superintendence will become the safeguard and *Chaperon* of all their nefarious practices, and that dollars will flow more abundantly than ever into their unscrupulous hands. Now, when the power of the kidnappers at Macao is well understood, when their omnipotency in reference to the election of a representative for the Cortes is considered, when their unscrupulous audacity and their barefaced dishonourable ingenuity is borne in mind, no one will doubt that they cannot but ruin any honest opposition, and find, in the long run, a blind auxiliary in the Lisbon Government and consequently in the local government too. If they have not yet succeeded, it is in my opinion in great part owing to the violent denunciations of the English press and Government.

The decoyed and forced coolies are constantly brought to Macao, and although sent back again, their kidnappers only expect a favourable opportunity of less vigorous government intervention to ship the wretches away. I think it is not enough to ascertain that a coolie is a willing emigrant, but that it is also necessary to prevent the selling of the man. This is the gordian knot of the Coolie trade and its great difficulty. It is useless to cut off all the heads of the idea but one; all the other heads will renew themselves.

Now, in Peru and Cuba, and generally in tropical America, the labour most in demand is slave-labour. This labour pays well and consequently fetches a good price. Tropical countries, moreover, are not countries that admit of an independent flow of colonists; the climate is a terrible obstacle, but in such countries men being forced to work will produce a great deal, and capital is always ready to invest in tropical lands and forced agriculturists. The American land-owners are ready to pay for any sort of slave labourer, but neither the climate nor the social organisation here facilitate in any way the ingress of free and independent emigrants.

According to these considerations it is clear that Macao would lose the greatest part of her pecuniary benefits derived from Chinese emigration, if a stop were to be put to the obnoxious contract system.

I proceed now to make known a circumstance that seems to me to have been quite overlooked, but that has been also a powerful means of destroying the efficiency of Portuguese humanitarian intervention, and one too which, according to my opinion, will for a long time still have a baneful influence on Chinese emigration. The

high price offered for a coolie, and the more active persecution of piracy by Chinese gunboats, have contributed to draw to Macao a great number of lawless Chinese who occupy themselves, in comparative safety, in *finding out emigrants* (!) These men, called in Portuguese *corredores*, are the very worst who can be found in bad Chinese society, and their known number is great, being about thirty thousand.

The nature of the business in which they are engaged, and Chinese instincts of self-organisation and association, bind these men in formidable secret societies of great extent and influence, so that it may be hopeless for the kidnapped person to escape their far-spread and tenacious net. This curious and interesting feature in the Coolie trade ought to be put in a clear light and studied more positively. I think nevertheless that it will be a most difficult, though possible, thing to destroy any such organisations, while they command large sums of money, numbers, and are fortified by common danger, crime, and the facilities of enormous profits.

There is a feature in the Coolie trade that has attracted more than the rest, and very undeservedly, the attention of the world—I mean the catastrophes that have occurred to ships transporting coolies to America. This is an act of the Coolie trade that shows unheard-of horrors in an undisguised light. Perhaps modern naval history has nothing to compare, in extraordinary tragical and atrocious circumstances, to the fate of many coolie ships. Even during the most implacable wars, the seas have not seen many as dreadful massacres, piracies, burnings and terrible destructions. A ship burning, with its cargo of hundreds of coolies shut in by iron gratings, and devoted to a horrible death, while the crew disappeared on the horizon, rowing, away from the tremendous scene, and leaving no compassionate eye to look at the woe-filled spot but that of him who is everywhere present in the vast solitudes of the waters; the inexpressible agonies the horrid cries and hopeless imprecations, the writhing, panting, convulsive mass of hundreds of suffering human bodies heaped into the furnace, the roaring rage of the fire, the waters finally rushing in through the breaches made by the implacable element and stifling the last groans of the expiring wretches, sucking down into the abyss from the sight of heaven the horrid hecatomb, while a pyramid of smoke alone remains slowly raising itself to the heavens like the dark spirit of vengeance and retribution. This is no dream, no hallucination, no morbid invention of the horrible; this is no rhetorical imagery; this is less than the actual truth; these are a few lines of the terrible tragedy acted and acted again on the Pacific Ocean, a consequence of the *auri sacra fames*.

I will now ask every candid person, Who is the criminal in this crime? It is readily answered that if the crime be arson the criminal is the man who lights the fire. Then the coolies are the criminals; they set fire to the ship, and they burn themselves. It is however a terrible suicide. To pronounce justly on this question, a special enquiry ought to be made in the case of every ship that is burnt or plundered. It may be that very often the taking of the ships by the coolies on board was the result of a premeditated plan and that pirates had taken the garb of emigrants for this purpose. In other instances bad treatment may have driven some cargoes to any extremity. It is not fair, on the whole, to adduce as examples of the coolie trader's cruelties, cases in which the coolies have been the workers of cruelty. I notice in the article on *Macao and its Slave Trade* a list of ships that have been the scene of cruelty, and bloodshed, but it is remarkable that the cruel blood-spillers are in every case the coolies. It seems a very strange way of reasoning to decide that the assassinated persons were more cruel than the assassins. The fact is that the object of the Coolie trade is to take coolies to America, *alive*. No one will admit that people will risk a large amount of money to decoy a number of Chinese simply for the pleasure of being murdered by them on board a ship on the Pacific Ocean. This notion, being the acme of absurdity, is however the logical basis of such arguments against the Coolie trade as refer to the burning of ships and murderings of crews by Chinese coolies. The greatest amount of cruelty that the Chinese emigrants have to suffer is during the process of exacting from them in shape of work the capital and interest of the money they cost. Capital does not care for lives, sentiments, humanities; capital cares only for interest. The coolie on his arrival in America must be submitted to a process that will squeeze out of him the greatest amount of value. If the death of the coolie be economically advantageous for the capitalist work will put the coolie to death. I am not referring to any particular person and do not mean to give offence. I simply argue on positive conclusions from the history of capital and labour. The fate of the Indians in South

America is a sufficient illustration for Peru; the over working of children and women in European factories is another form of this same economical theorem. How many smooth-faced law-abiding Europeans, rich, industrious men, are more cruel a thousand times than the drunken, brutal, murderous coolie-ship sailor! The coolie in fact is to be made into money, and if humanity will do the job no one on earth will be more amiably treated, but if cruelty is necessary no one will be submitted to keener torture. There are, however, in nations, two distinct interests at work—the one I will call the individual, and the other the general interest. All the harm is done by the antagonism of these two, and the stronger, the blinder the individual interest, the weaker a nation becomes. Individual interest does not understand self sacrifice; general interest lives by it. Perhaps tropical America has not understood that free labour, although not so favourable for the momentary interest of the few, is a much more solid basis for national prosperity and greatness. The large amounts of money that slave or contract labour may bring to the privileged will be carried as tribute to the European centres of dissipation, but it is only with the money, hardly won by the steady work of small proprietors, cultivators, and industrious men, that the nation really enriches and fortifies itself.

The author of the article on *Macao and its Slave Trade* is remarkably unjust in his appreciation of Portuguese local official intervention in the Coolie trade at Macao. He seems to be blind to the brilliant instances of disinterestedness, courage, foresight, and prudence on the part of many Portuguese officials here. There is a notion current among red-hot anti-coolie detractors, that the governors of Macao ought to put at once a stop to the trade, and as they have not seen this done violently, they condemn all the well-thought and considerate actions of honest and intelligent men. They are exceedingly few, I own—they are so few that they look strange to the multitude, and fall very often under the overwhelming wave of intrigue,—but we have still some of these men to spare who are an honour to any time and any country. For these men the government of Macao must be a terrible appointment. They will work here for the good of their country as honestly and strenuously as anywhere else, without hope of corresponding equivalent reward in any shape, and their names will be slandered, their intentions misrepresented, their reasons misstated. The metropolis is remarkably ignorant about Macao and Chinese affairs, and it so happens that very often an honest official is suddenly shuffled from any other post to the governorship of Macao, and must feel exactly in the same bewildering moral situation as the somnambulist who would suddenly awake standing over an abyss upon a telegraph wire. The Coolie trade difficulties, the Chinese antagonism assiduously stirred up for anti-coolie purposes by English officials (I hope not to be contradicted on this point for English veracity's sake), the rascally, powerful and unscrupulous kidnapping element, the opposition of dishonest and degraded Portuguese officials on whom the kidnapping element generally leans, a thousand evils springing up from mysterious sources, a perfection of combination in difficult and almost insuperable obstacles,—all this the Portuguese Governor must meet at Macao, unprovided by the metropolis, unarmed for such a giant's struggle, if not sustained by personal high qualities. There is a constant chorus of kidnappers exclaiming here and in the metropolis that Chinese emigration must be kept up for patriotism's sake, there are ignorance and corruption listening with applause, and there is poor honesty alone and slandered working hard in the cause of true and real patriotism. I would commend to your respect many honourable names, but I will take the present Governor of Macao as an example. His action in the Coolie-trade business (which he received from his predecessor in a still chaotic and ungovernable state, though great good had been done) is a remarkable instance of the unwavering application of a system that is intended to destroy by degrees all the evils of the Coolie trade without bringing ruin on people that have not deserved it. I must notice that although the kidnappers and Coolie dealers may be the worst of men, the Portuguese Government has countenanced them for some years, and allowed every other trade to come to them, and it would be unfair to suddenly take from them a promised and expected protection. By a gradual pressure of administrative measures the present Governor has put down a great deal of evil and reduced the Coolie trade malpractices to a minimum. You have witnessed his efforts; you may judge the truth of what I say.

Portugal has not the slightest real interest in the contract system of emigration. The Coolies belong to a foreign country, and leave in foreign ships; the money is spent and won by foreigners; the

Coolies are kidnapped or otherwise decoyed by men of dubious and unknown nationalities. Finally, no sensible advantage is produced to Portugal by the *Macao Coolie Trade*; except that those men of unknown nationalities, who live by kidnapping, claiming to be Portuguese, rejoice in the protection of a regular government for their irregular practices, and pay for it. They gamble very much; and the Pactolus that flows in to Macao is drained away by the gambling houses. The revenue of the Colony shows a surplus, and that is all: every one remains poor. These are the advantages.

Let us sum up now the disadvantages. First and worst of all, the deep and irremediable degradation and moral disorganisation necessarily incidental to Coolie dealing spreads and invades every social element here; Macao becomes the place of refuge of every stupid and cruel criminal that comes to find business congenial to his tastes; the money, easily won, puts into the hands of the most unprincipled the greatest force, and honesty is hunted down by them everywhere, by all kind of strange devices and subtle inventions, until they can succeed in expunging it altogether from Macao. All other trade merges gradually into the Coolie trade. This trade is not a hen that lays golden eggs; it is a minotaur that makes an Augean stable of Macao.

A rich and abundant harvest of hatred is reaped everywhere; in the Chinese Empire, England, and the China Colonies: they hate Macao. I think that there is not one single civilised nation in the world that knows this colony and does not despise it. I do not know, at least, a single word of praise bestowed upon it during her Coolie-trade phase, and know of many severe and terrible imprecations against it in many languages. The Portuguese name has been defamed at Macao by men that are neither by race, nor tradition, nor education, other than Asiatic bandits, picked up in every obscure quarter of these piratical Malayan and Chinese seas. They have thriven here on a most immoral and shameless occupation. There is one item more, to add to all that I have enumerated for Portugal to get by the Coolie trade at Macao. It is dishonour!

I have finished the sum, and now let the Portuguese nation look at it, compare the advantages with the disadvantages, and choose either \$200,000 during a few, very few years, or her honour, her own high and immaculate honour, that was won by the sword of her warriors, by the pen of her writers, by the ships of her navigators, by the word of her missionaries. They all await your decision who have it in your power to decide; they wait and they doubt, and they fear, because the choice seems slow and hesitating; they fear that this hesitation may bring their grandsons to a decision that will make them unworthy of such ancestors. The past fears to be killed by the present.

I hope that the voice of the glorious past will not be hushed in the hearts of my fellow-countrymen, and that they will again ennoble Macao as a true Portuguese colony, that they will strive to bring it up from its gradual sinking towards inevitable and hopeless degradation and shame, and will chase and expel the horrible amount of ruffianism that is here at work to make of this place a new and more infamous Algiers.

P. G. MESNIER.

## Shipping Intelligence.

### ARRIVALS.

Nov. 30, *Colorado*, American steamer, Dearborn, 3,836, from San Francisco, November 1st, Mails and General, to P. M. S. S. Co.

Nov. 30, *Bourayue*, Russian gun-boat, Captain Bose, 700 tons, from Kobe, November 28th.

Dec. 1, *Maud*, British steamer, Brittain, 843, from Kobe, 28th November, General, to Captain.

Dec. 2, *Glenlyon*, British steamer, Templeton, 1,386, from Shanghai, General, to Jardine, Matheson & Co.

Dec. 4, *Cleopatra*, British 3-masted schooner, Schultz, 190, from Chefoo, November 21st, Sugar, to Walsh, Hall & Co.

Dec. 4, *Cow fan*, British brig Habekost, 289, from Amoy, November 17th, Ballast, to Kniffler & Co.

Dec. 4, *Oregonian*, American steamer, Harris, 1,914, from Shanghai and Ports, November 27th, General, to P. M. S. S. Co.

Dec. 5, *China*, American steamer, Cobb, 4,000, from Hongkong, November 27th, Mails and General, to P. M. S. S. Co.

Dec. 5, *Madras*, British steamer, Bernard, 1,325, from Hongkong, November 27th, Mails and General, to P. & O. Co.

### DEPARTURES.

Nov. 30, *Golden Age*, American steamer, Coy, 1,870, for Shanghai and Ports, General, despatched by P. M. S. S. Co.

Dec. 1, *Colorado*, American steamer, Dearborn, 3,836, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Dec. 2, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Dec. 3, *Monocacy*, American gunboat, Phillips, 1,030, for Kobe and Shanghai.

Dec. 3, *Courier*, Russian steamer, Lemanefsky, 594, for Nagasaki, General, despatched by Walsh, Hall & Co.

Dec. 4, *Tamerlane*, British ship, Kerr, 768, for New York, Tea, despatched by Smith, Baker & Co.

Dec. 4, *Burnside*, American barque, Pendergrace, 464, for Kobe, Ballast, despatched by Captain.

Dec. 3, *Zenobia*, British ship, Hutchins, 1,190, for Kobe, Ballast, despatched by Captain.

Dec. 4, *Zohrab*, British barque, Fullarton, 411, for Kobe, Ballast, despatched by Captain.

Dec. 5, *Maud*, British steamer, Brittain, 843, for Kobe, Ballast, despatched by Captain.

## PASSENGERS.

Per American steamer *Golden Age* for Shanghai and Ports.—Mr. and Mrs. Haskell, Mr. F. T. Hardy, Messrs. Howard Church, Coryell, F. Siga, Naito, Shiga, and Mr. Hanabasa and friends.

Per American steamer *Colorado*, for Hongkong.—Mrs. Marshall, Mr. Pollan, H. E. Viscount St. Januario, Messrs. P. G. Mezier, A. C. M. de Carvalho, M. Piotti, Rear Admiral Parrot, and 4 in the steerage.

Per British steamer *Bombay*, for Hongkong.—Mrs. Monteiro, Messrs. Schwartz, and Amam, and 10 Chinese, on deck.

Per P. M. S. S. *Oregonian*, from Shanghai, for Yokohama.—Rev. Bishop Williams, Messrs. R. H. Boyce, W. Kilmer, Fan, A. O. Gay and servant, Joseph and servant, Harris, Brittlebank, E. J. Durny, Mosima, eight Japanese officers and 68 in the steerage. For San Francisco.—Messrs. Morse, wife, infant and nurse, Arch J. Little, Francis Graham, John Brown, John J. Taylor, Thomas Harrington.

Per P. M. S. S. *China*, from Hongkong, for San Francisco.—Dr. H. E. Davis, Mr. W. Bennett, and 143 Chinese in the steerage. For New York.—Mr. B. D. Smith, and 3 in the steerage for Yokohama.

Per British steamer *Madras*, from Hongkong.—Mr. and Mrs. Martin, 3 children and European maid-servant, Mr. and Mrs. Newcombe, Mr. and Mrs. Davis, infant and native maid-servant, Miss Sutherland, Mr. and Mrs. Penney, Mr. and Mrs. Fitzgerald, Messrs. Sherrington, Pole, T. Mahida, A. Mahida, Hori, Sawada, A. Fitzgerald, Arayandino, and one Chinese.

## CARGOES.

Per British steamer *Bombay*, for Hongkong:—

Silk ..... 291 bales.

Per P. M. S. S. *Oregonian*, from Shanghai:—

Treasure ..... \$25,900.

Per British steamer *Madras*, from Hongkong:—

Sugar ..... 2,193 bags.

Sundries ..... 107 packages.

Merchandise ..... 662 "

Iron hoop ..... 522 "

" nails .....	200 "
" bars .....	41 "
Naval stores and provisions .....	401 packages.
Alum .....	100 "
Rum .....	11 "
Samples .....	6 "
Treasure, value \$300,000 .....	75 boxes.
Live bear .....	1 "
Cigars .....	24 cases.

4,343

## REPORTS.

The American steamer *Colorado* experienced very stormy weather during the last three weeks.

Per P. M. S. S. *Oregonian*, reports: left Shanghai, Nov. 27th at 5.08 a.m.; arrived at Nagasaki, Nov. 29th at 2.28 a.m.; left Nagasaki, Nov. 30th at 12.21 a.m.; arrived at Hiogo, Dec. 1st at 7.21 p.m.; left Hiogo, Dec. 2nd at 8.35 p.m.; arrived at Yokohama, Dec. 4th.

Per P. M. S. S. *China*, reports: left Hongkong, Nov. 27th. Had heavy head winds and sea till Dec. 2nd; latter part of voyage rainy and light variable winds. Dec. 3rd at 8.18 p.m., 80 miles N. E. of Cape Toy, exchanged signals with P. M. S. S. *Colorado*, bound for Hongkong; (Flag ship of Russian Admiral arrived at Hongkong, at 2 p.m. Nov. 27th.) same day off Samto, passed another Russian man-of-war, bound into Hongkong. Dec. 4th at 3 p.m., passed an unknown steamer bound North. Brings 210 tons freight for Yokohama.

The British steamer *Madras* reports left Hongkong on 27th November, at 7.17 p.m., experienced strong N. easterly winds with heavy sea as far as Tung Ying, from thence to Rock Island moderate and fresh winds from N. to N. E. with heavy northerly swell, and thence to Yokohama fresh head winds and fine weather. Passed P. & O. steamer *Bombay*, 3rd Dec. at 11.55 p.m. British ship *Tamerlane*, one English, and one American barque on 5th, at 12.30 p.m. off Vries Island, also a Japanese steamer standing to the southward at 3.30 p.m. Arrived 5th instant, 7.45 p.m.

Chinese Insurance Company,  
(LIMITED.)

ON and after this date a discount of Thirty-three and One-third per cent. (33½ per cent.) will be allowed on ALL RISKS accepted by this Company instead of 10 per cent. as heretofore.

Mean .....		29.91	45.3	41.9	37.8	.230	.755		52.6	39.9	46.2	.10

From observations at 9 A.M. daily, on the Bluff (100 feet above sea level), the mean reading of the barometer last month was 29.92 in.; the highest reading was 30.33 in. on the 19th; and the lowest 29.45 in. on the 30th.

The mean temperature of the air was 49.1 degree.

The highest day temperature in the shade was 65.0 deg.; on the 14th, and the lowest night temperature 34.0 deg. on the 23rd and 27th; The extreme range in the month was therefore 31.0 deg.

The difference between the mean dew point and the air temperature was 8.2 deg.

The mean degree of humidity of the air was .769; complete saturation being represented by 1.

The general direction of the wind during the month was northerly.

Rain fell during the month to the amount of 1.16 in. There were 26 days on which no rain fell; the maximum fall in one day was 1.16 in. registered on the morning of the 20th.

C. S. F. FAGAN,—Lieut.,

R. M. L. I.

CAMP, Yokohama, 5th December, 1873.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, DECEMBER 6TH, 1873.

**Cotton Fabrics.**—The demand for *Shirtings* since the departure of the last American mail has been somewhat brisk and has exceeded the stock of goods on hand. The demand has been chiefly for chops of established character—and these have obtained ready sale at the quotations subjoined—contracts “to arrive” having been made for some fairly large parcels. The sales reported amount to 24,200 pieces. A rather better demand has also obtained for *Turkey Red* Cottons of which some 1600 pieces are reported sold. *Velvets* appear to be drooping and are quite neglected. In *Taffachelass* an improvement is exhibited and sales at better prices have been made, the demand, however, would now appear to have been well supplied. The amount of business transacted in other classes of Cotton goods has been unimportant.

**Cotton Yarns.**—A considerable business has taken place during the closing fortnight, the aggregate sales reaching some 1950 bales of all classes at the range of prices which we quote. Goods of well-known chops are ready of sale.

**Woollens and Woollen Mixtures.**—The trade in these goods has been of the meagrest and most most unsatisfactory character for some time past, and the most extensive foreign dealers report an almost absolute suspension of demand from native buyers. Cloth is unsaleable.

**Iron and Metals.**—The iron market continues very quiet. Contracts for 150 tons *nailrod* for forward delivery have been made during the past week, but transactions are otherwise upon the basis only of present wants. In other descriptions of iron there is little if any business being done. The stock of *tin plates* is ample, and the demand but moderate. The deliveries of iron of all classes during the fortnight are stated at 4,400 piculs, and stocks remaining on hand are 14,500 piculs.

**Sugar.**—Our market during the past week has become weaker, and sales can be effected in small quantities only at lower rates for Formosa. Prices for China kinds are unchanged. Arrivals are 3,000 piculs Formosa. Sales for the week comprise: 405 piculs China and 100 piculs Formosa. We quote:—

Formosa, in bags ..... \$4.15 to \$4.30.  
do. in baskets ..... \$3.80 to \$3.90.

Rice.—No change is reported.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**Silk.**—The market has been very active during the past fortnight, and fine-sized hanks, which have been specially inquired for, have advanced fully \$20.

Settlements since the 20th ultimo are 1,150 bales of hanks and 150 bales of Oshiu, good to best; full sized Oshius are higher in this market than at home and transactions under the present circumstances are impracticable.

Supplies have come in freely, and the stock is estimated at 1,300 bales.

**Silk-worms' Eggs.**—Cards intended by the Japanese Government for the home reserve and bearing a brown stamp (the cards for export have a green stamp), continue to be smuggled from the interior into this port and are sold at from 0.40 to 0.75 cents. The extent to which these operations have been carried on is a matter of guess, but their importance is sufficient evidence of either the impotence or the connivance of the native authorities.

Total shipments to date amount to about 1,340,000 cards. After the departure of the American Mail (the cargo taken by which will in all probability be the last), we will be able to report the final figure of this year's export.

**Tea.**—Business on our Tea market remains brisk notwithstanding the firmness on the part of the native holders which is certainly not justified by advices from the United States.

The amount settled for the past fortnight since the departure of the last American steamer reached the fair total of piculs 5,100: the bulk of these comprise Good Medium to Fine classes at \$33 to \$37, and about piculs 1,000 of Finest class have been settled in various lots ranging at from \$40 to \$45 per picul.

Arrivals continue on a scale only calculated to supply daily settlements, and by these means only are prices supported at their present level; native merchants seem to overlook the fact that the period for sailing vessel to New York, at anything like current rates, must soon expire, and that a large reduction must be established to meet the difference of cost of freight between sailing and steam freights, which, later on, must be conceded by the native merchant and not the foreign exporter.

Prices close firmer and the market has ruled somewhat irregularly since last issue, but quotations shew no alteration.

The last steamer took 298,256 lbs. in all, and the *Tamerlane* which sailed from this for New York direct 736,493 lbs. making total export from Yokohama to date a little over seven and three quarters millions pounds.

The *J. S. Stone* is the only vessel on the berth for New York at present.

**KEATING'S COUGH LOZENGES.**

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

**KEATING'S BON BONS OR WORM TABLETS**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all

Chemists.

CAUTION.— The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

THOMAS KEATING, London  
EXPORT CHEMIST AND DRUGGIST.

## MISCELLANEOUS.

**THE GREATEST WONDER OF MODERN TIMES!  
HOLLOWAY'S PILLS.**

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

**THE GREAT CURE ALL!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kind. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

**THE "MOFUSSIL GUARDIAN,"**

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

**SEVENTY YEARS OF SUCCESS**

Have proved beyond question that

**ROWLANDS' MACASSAR OIL**

In the best and safest Restorer and Beautifier of the Human Hair. Perfectly from any poisonous or mineral admixture, its certain good effects are lasting, even to the latest period of life, it prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandruff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 6d., 7s., 10s. 6d., equal to four small, and 21s. per bottle.

**CAUTION.**

Each Bottle has a GLASS STOPPER, instead of the Cork as formerly. All with CORK are SPURIOUS IMITATIONS. This Notice is deemed necessary, as the Proprietors have received intimation that a large quantity of Counterfeit, of the most pernicious quality, has lately been sent from France and Germany to India and the Colonies under their names.

**ROWLANDS' ODONTO,**

Or PEARL DENTIFRICE, preserves and beautifies the Teeth strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipient decay and polishes and preserves the enamel, to which it imparts a PEARL-LIKE WHITENESS.

**ROWLANDS' KALYDOR.**

An Oriental Botanical Preparation. This Royally-patronsed and Ladies' esteemed Specific realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling, and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle. Sold by all Chemists and Perfumers, and at all Bazaars throughout China and Japan.

**ROWLANDS' ESSENCE OF TYRE**

never fails to produce immediately a perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Black, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle.

All these articles have been used and justly appreciated by all the Sovereigns and Courts of Europe, and the aristocracy of the world, during the last seventy years, being of inestimable value to those who have once used them. They are sold by all Chemists, Perfumers and Bazaars throughout India, the Colonies and South America.

## Notes of the Week.

THE fire which raged for six or seven hours continuously on Monday night at Yedo, will probably prove to be of the one most devastating that has been experienced for many years past in that city. While exceeding in extent of area the destruction of most of the past conflagrations the importance of the property which has been sacrificed on this occasion is considerably larger, and the loss, though falling upon a wealthier class of the inhabitants, of greater amount. The vaguest rumours only were current yesterday in Yedo, and until more accurate information can be obtained from the statistics which the authorities have commenced to collect, the accounts which are circulated under this head can only be received with considerable reserve.

The fire is said to have originated at half past nine o'clock, in the Iwaicho in Kanda and to have spread thence with intense rapidity attaining its greatest extent at about half past three o'clock. Attempts to arrest it appear to have been made at different points of its progress by demolishing houses hastily, and here and there a blind canal or watercourse seems to have turned the direction of the fire, which a sharp N.E. wind drove before it, obliquely. Nothing however could have stopped its march but the broad water line of the Sumida river and here, at the Koamicho Sanchoe, it was finally arrested. There can be little doubt that a comparatively new element supplied fuel to the flames and added to their fierceness, and the remains of kerosine oil tins attest the danger of storing such material for fire in the midst of a crowded population. Here and there a mud godown appears to have yielded to the effects of the surrounding fire although the greater number seem to have withstood it well. The following appear to be the districts to which the fire was mainly confined and in which scarcely anything but the fireproof buildings remain at present. Breaking out in Iwaicho in Kanda it traversed Kameicho, Hashimotocho, Tsukegidana, Bakurocho (2 cho), Kodemma cho (3 cho), Teepocho, Odemmacho, Aburacho, Shiocho, Hase-gawacho, Tadokorocho, Horidome, Sakaicho (where the old theatre is situated), Yoshicho, Osaka cho, Terifuricho, Kobunacho, and its career was stayed only by the Sumida at Koamicho Sanchoe.

It may be presumed that on an occasion like this a considerable loss of life must have occurred, but of its precise extent we are unable to learn anything. The courage with which the Japanese defend their property against fire is occasionally pushed to rashness, and a vast conflagration like this has no doubt demanded its victims. Nor can the extent of the fire nor the number of houses consumed be correctly estimated. It is supposed that the line of the fire extends some two miles and a quarter and that it has embraced some five thousand dwellings all of which have been destroyed. But this is at present merely conjecture and some days must elapse before reliable details can be obtained. The value of the property destroyed can of course, only be guessed at, and it would be idle to hazard any conjecture on the subject. The greater part of the valuables were no doubt secured in the fire-proof buildings, and nearly all of these are safe.

The wisdom of erecting iron standards for the telegraph wires—an act which was very generally commented on at the time—was signally proved on this occasion, and no interruption to the service appears to have been involved.

The courage with which the Japanese contend with fire is not less conspicuous than their activity in repairing its ravages. Their fortitude in these trying circumstances has deservedly attracted the attention and commendation of all foreigners. It is eminently practical in its character, and nothing can present a more favourable view of the national mind than the unwonted energy which a calamity of this nature seems to evoke; the calm and almost cheerful patience with which its inseparable privations and troubles are supported; and the order, discipline and industry which seem to arise spontaneously out of a condition of chaos and of absolute physical disorganisation.

Two consequences of this calamity may, we think, be foreseen. It is not improbable that the Government will see reasons to interdict the storage of dangerous mineral oils in large centres of population, and that the mercantile quarter will be rebuilt in more solid and durable material than timber.

A NATIVE newspaper, the *Tokai Hibi Shimbu*, states that the length of the line of buildings consumed by the fire on Monday was 18 *cho* and the width 6 *cho*. The value of the property destroyed is estimated roughly at two millions of *yen*.

THE heaviest loss which the last fire seems to have occasioned is reported by the *Yokohama Daily News* to be that of the "Dai Maru," the well known silk store in the Odenmacho, Yedo. A parcel of 30,000 *yen* in Japanese Bank Notes had been packed up for transmission to Ozaka, and, in the excitement of the moment, is said to have been overlooked while the various wares were in course of removal to the fireproof buildings. This, we confess, smacks somewhat of the marvellous.

THE Ball given yesterday evening in honour of Mr. R. G. Watson at the Yokohama United Club, was very fully attended by the foreign Residents of Yokohama. There were also several Japanese officials present. After supper Mr. Cargill proposed Mr. Watson's health, and paid a very deserved tribute to the qualities which had made him so popular as a member of Society and so useful as a public servant during his residence in Japan.

Mr. Watson returned thanks with much warmth of feeling, and expressed the pleasure which he had derived from his residence in this country, concluding his speech by proposing the health of "The Ladies"—a toast which he coupled with the name of Lady Parkes.

Sir Harry Parkes, in returning thanks, adverted to the able and zealous assistance he had derived from Mr. Watson in his official duties, and expressed the pleasure with which both Lady Parkes and himself again found themselves at home and among old friends; and the gratification which both derived from any efforts they could make for the welfare or pleasure of the community.

H. I. M. The Mikado on being informed of the intended departure of Mr. Watson expressed his desire to bid him farewell, and, in the audience granted for the purpose, adverted in complimentary terms to the satisfaction he had derived from the manner in which Mr. Watson had discharged his duties at the Court.

THERE is a curious story abroad illustrative of the careless manner in which the officials in this country sometimes deal with the interests of the people.

It seems that a decree was issued forbidding pigs to be kept within the boundary of any city or in any place crowded with habitations, on account of the foul smells injurious to human health which they engender, but it was couched in such high-flown language, abounding in new and strange Chinese compounds, that the people mistook its meaning and thought that the keeping of pigs was altogether forbidden. Their value instantly fell greatly, and in many places the people destroyed them. At Osaka many were thrown into the river. All this would not have happened had the officials who issued the edict taken the trouble to render it intelligible—or not taken the trouble to disfigure the simple language in which the wishes of the Government could have been conveyed. It appears that a notice correcting the mistake of the people has been sanctioned by the Council of State, but still hangs fire in the hands of the Treasury officials, and meanwhile people are being ruined by the depreciation of their live stock.

In the same way the people have taken as intended for themselves a notice directed only to Japanese subjects in China, which was nevertheless published throughout the country, and contains an order that persons who wear their hair cut in European style must wear hats when out of doors. This order to wear hats, which, of course must be bought, has caused some consternation in rural districts, and it would seem rather inconsistent, after recommending our cut of hair to its own people on the score of its economy, that the Government should insist on a large expenditure in additional head-covering. This misapprehension arose, no doubt, from the difficult and involved style of the language in which the proclamation was issued, and from its being printed in square characters with which the common people are almost entirely unacquainted.

WE stated in our last issue that Hanabusa Yoshimoto had been despatched to St. Petersburg as Minister for Japan. It would have been more strictly correct to say that he will be charged with the supervision of Japanese interests there, but in the rank of Secretary of Legation. He has been entrusted with the negotiations connected with the disputed possession of Saghalien.

A FOOT PAPER-HUNT came off yesterday afternoon, being the first of the present season.

The meet was on the Running Path at Rifle Range, and Messrs. W. Brent and Abell were the hares. After the usual grace of ten minutes the hounds, consisting of a field of a dozen of our young and active Athletes, were cast off. Scent was found at the end of the Rifle Range, and led up the hill to the left, thence across to the range of hills skirting the Race Course, from there over upland downs and cultivated fields at the back of the new Chinese cemetery to the ridge behind the rope walk and thence across the new road to the heights above the Rifle Range.—Messrs. Hamilton and A. J. Dare led throughout, the second-named gentleman getting back on to the Rifle Range first, but on the flat for the final run in Mr. A. Dare caught them up, thereby winning the Cup—Mr. J. Dare came in second and Mr. G. Hamilton third.

The time occupied in this run was 38 minutes during which the hounds gained five minutes on the hares. Though the course was tolerably stiff and the pace reasonably severe the field kept well together. We conceive, however, that it would be more in accordance with the recognised rules of "Hare and Hounds," if the paper were followed more strictly and not run on to when sighted as is, we fear, too much the case at present.

THE third Foot-ball match of the season came off yesterday afternoon on the cricket-ground.

The game, English v. Scotch and Irish, commenced about 4 o'clock, and though it resulted in a draw, there was more spirit exhibited in this game than in either of those which preceded it. The weather was most favorable, there being a warm sun while it lasted, while there was no wind to affect the play. During the first half-hour the ball was kept well

down at the Scotch goal, but on ends being changed, the Scotch and Irishmen played up with more of their characteristic national vigour. Of course with the rules of the game as played out here there were many *scrimmages* and consequently much time was lost.

Mr. Gubbins "dribbled" the ball capitably and Mr. Abbott played half-back in excellent form; Messrs. Hamilton, Abell, Hill and E. Fraser were conspicuous amongst the forward players; while Messrs. Melhuish, Dare and Wheeler were also equally most useful.

Though perhaps an hour is quite long enough for a game we think it a pity that it is not commenced half an hour earlier as the evenings draw in so quickly at this season of the year. Before leaving the ground we heard that the game for next Wednesday afternoon would probably be the return match of The Services v. The Settlement.

A TELEGRAM was received yesterday evening by Messrs. Hudson, Malcolm & Co., Agents of the "China Trans-Pacific Steam Ship Company," apprising them that the S. S. *Vasco de Gama* had sailed from Bombay at midnight, on the 10th inst.

THE Udaïjin Iwakura, his son and three daughters, with Ito Sangi, visited Yokohama to-day, as the guests of Sir Harry and Lady Parkes, at the British Legation.—*Gazette*.

ACCOUNTS from Yedo report that Sanjō and Kido are rapidly regaining their health, and we hope the country will soon again enjoy the benefit of their services.

IN H. B. M. Provincial Court yesterday, Wm. Curtis was sued by Thos. Hammill for \$25 balance of wages. As defendant did not appear, judgment was given against him for the full amount with costs. The cases in the U. S. Consular Court consisted of charges of drunkenness against seamen, and were punished by fine and imprisonment.

THE following is the passage from a series of articles published in this Journal in November, 1870, on the Shimonoseki Indemnity, to which reference has been made elsewhere in an article bearing the same title in to-day's issue:—

Is there, then, any sufficient reason why this large sum, for such it is to the country, should still be extorted from it? Can it be just or expedient, or in any sense wise and right, to demand from the Japanese the payment of a debt, for the contracting of which it received so severe a lesson, and towards the discharge of which it has already done so much? The whole situation is entirely changed since the occurrences which gave rise to the claim. Then, the Central Government was hostile and aggressive. Many of the most powerful nobles, nurtured in profound ignorance of the relative forces of Japan and the European nations, supported its views, shared its sentiments, and lent their help to enable it to evade its solemn obligations; the people were against us, and our presence in the Empire violated some of their most cherished traditions. Now it is wholly otherwise. The Central Government, established at the expense of a revolution which must have greatly impoverished it, though sometimes obstinate, often unwise, and uncompromising even in its own interests, has shewn and still shows every friendly disposition towards us. Its own old ill-concealed animosity, and the more active hostility of the great nobles, have given way to sounder views of their respective duties and obligations. The insults which gave rise to these claims have been avenged. The power of Chōshū has been humbled. The material losses incurred by the marine of the various aggrieved nations have been specially compensated for, and a very long period has elapsed since the acts were committed for which the Indemnity was claimed. The country is unquestionably poor, and requires all its resources for reproductive works and the restoration of its currency. The Government is now fully conscious of the folly of measuring its strength with that of the European Powers, and all ranks, by their eager desire to acquire our knowledge and adopt our inventions, give ample proof of the estimate in which they hold our civilization. If lessons were required, the Japanese have had them and have profited by them; if an example is wanted, let it come from us in the form of an act of mercy and generosity. It is not in the spirit of European teaching to avenge acts of ignorance and folly long after they have brought their punishment, and have been atoned for by contrition and an attitude implying entirely altered convictions. Though it is well to have a giant's strength, is it not tyrannous to use it like a giant? Every dollar of this required Indemnity is so much off that stock of wealth, which, for our own, though much more for their benefit, we desire to see the Japanese accumulate. The remission of the debt by the European Powers and America, to whom the sum divided between them be a mere drop in the

bucket of their vast revenues, would be a graceful act towards a Government and a people to whom our presence has been no unmixed benefit, and a means of convincing them that the protestations we have made of our desire that mutual benefit should arise from our intercourse with them, are belied neither by our real sentiments nor by the acts which spring from them.

To the Ministers of the four Powers, therefore, we most earnestly appeal to urge on their respective Governments the remission of this claim.

To the Minister of the United States, we would urge that his nationals have been fully and specially compensated for their losses, and that his Government was at but a small expense in exacting reparation for the insults offered to his nation's flag. Its claim is one, which, when all the circumstances of the case are well considered, it cannot greatly flatter his national pride to make, but which it would well comport with the acknowledged kindness of the American disposition to waive.

To the Dutch Minister we would plead, that the position of Holland in a country where she also so long enjoyed exclusive privileges, would not be the less appreciated were she associated with the three great Powers in a generous concession to her ancient ally.

To the French Minister we would appeal on the grounds that France has played no small part in this country, that she is still profoundly interested in its welfare, and that on this welfare much of her own prosperity depends.

And lastly we would appeal, if possible more earnestly, to the British Minister, whose career has been so much bound up with the recent history of this country, and whose interest in it he has shewn to be both warm and profound. We cannot believe that he will advise the British Government to exact its share of this debt. We cannot think that in representing a nation and a Government as generous as it is powerful, he will give his consent, or ask that of England, to the wringing of this large sum from the Japanese. We are convinced that an act of generosity in this case will be an act of high political wisdom, and we venture to urge on him and all his colleagues collectively, as we have urged it on them individually, to procure by their representations the remission of this claim.—(*Japan Mail*, 28rd Nov. 1870.)

CULTIVATION OF FISH IN DITCHES AND PONDS.—Much attention is now being paid in Germany to the cultivation of fish in ponds and ditches, and it has been found, contrary to the generally received opinion in reference to such localities, that they are more favourable for the purpose than other large bodies of water, apparently fresh and pure in their character. This is doubtless owing to the great abundance of animal life, as well as to the more decided concentration of vegetable substances in the form of living plants of different kinds, including the algae. This produces a constant evolution of oxygen needed for the respiration of the fish, and allows a larger mass of life to be crowded together in a given space. The reproduction of the species is also unusually rapid, and the young grow very quickly.

#### EDUCATION IN JAPAN.

##### III.

##### JAPANESE STUDENTS.

WHILE almost nothing is known abroad as to the truth concerning 'native officials,' and but little about 'foreign teachers' in Japan, something is known, and much has been said, about Japanese students. Most persons have formed extremely favorable opinions about them. In order to treat our subject fully, we must examine these opinions.

Japan had been so long sealed from the world, that foreign nations regarded it as a land whose people might possess the average nature and capabilities of Asiatic nations. Indeed, it might be said that of the mental and social status of the Japanese nation, the ordinary westerner knew nothing. When, then, a few years ago, there came upon America and Europe a sudden influx of polished and eager travellers, and of bright, earnest and very polite students, the tremendous reaction of opinion oscillated into extravagant laudation and unbounded generosity. The *entrée* into homes and families closed to ordinary comers was their's. Every social encouragement and educational aid was given them. The rules of most of the schools abroad were broken or made exceptions to in their favour. Nothing seemed to be left undone to make these oriental strangers feel at home, and to give them as complete an education as good schools, trained ability, and faithful labour could secure. When civil war broke out in Japan there were several Japanese students in America and Europe. While those in Europe returned home, those in the United States were supported by the private contributions of American gentlemen, and retained in school and home, until affairs in Japan were settled and remittances arrived.

The Japanese students abroad were so earnest, diligent, polite, quick and eager to learn, that they won plaudits even from those unused to praise. The president of a Massachusetts College said he wished to have a Japanese in every college in America, to teach the undergraduates good manners. The principal of a Connecticut High School said publicly that a body of young men of such powers of observation as the Japanese students exhibited could not be found in America. The journals of England and Germany as well as of America stinted no praise of the graceful orientals in their schools. Several of the Japanese students won distinctions at English, German and French Universities and at American Colleges, and others would have assuredly done so, had not the grave came between them and the goal. All these things tended to produce the opinion, held by some, that the average Japanese is even superior to the average American or European student.

In order to judge the matter fairly, let us take a full view of the facts.

In the first place, it must be borne in mind that the Japanese students abroad are the very best representatives of Japan's intellect, of high social position, and hereditary culture. They are not the average of her sons. They are her best, by nature, inheritance, character and selection. They do not go abroad indiscriminately from the mass of the people, as, for instance, American students flock to Germany. About ninety per cent of the Japanese students abroad are of the *samurai* class, and were carefully chosen on account of their character and ability. By no canon of justice would it be fair to compare them with the average western student. Further, in very many cases, extraordinary facilities were given them to procure tutorial aids which the student

abroad could not obtain. Again, those students who won distinctions or prizes were in every case students of special courses or subjects. They did not compass the entire curriculum prescribed for the regular university or college students. Not one Japanese student has yet been graduated from the full course of an European University or an American College, though that they are fully able to do so, if they take the time, we entirely believe. We have stated these facts, simply to get at the truth, and to allow the subject to be seen from all sides. We have not spoken of the great obstacles to be surmounted by the Japanese student abroad, we suppose them to be known and felt. It is because they are known, that extraordinary merit attaches to the success of the Japanese students abroad.

We shall now endeavor to give our impressions of the actual status of the Japanese student, his capabilities, and his mental complexion. These impressions, it is but fair to state, have been formed after five years constant instruction of Japanese youth, both abroad and in this country.

We can treat our subject best by making a contrast between the Japanese and the western student.

The first great point of difference which the foreign instructor notices in Japan is the almost utter absence of any necessity of enforcing obedience. In his own country, he knows that among his most important needs are physical vigour and a stern will. To govern a class of boys of the Anglo-Saxon race is like holding the safety-valves of as many steam-engines. To control a class of boys at home requires the expenditure of an amount of nervous force that many teachers do not possess, which injures the health of many, and makes a day's toil in the school-room severe, even to exhaustion. It has become almost a maxim in the United States that no one should be a teacher more than fifteen years of his life. No wonder that the nervous and dyspeptic pedagogue or the worn professor at home looks upon Japan as the teacher's paradise, and hails the Japanese student as the embodiment of his ideals. To leave the boys of his own land who feed their bodies with beef, and their brains with the ideas that have made England and the United States what they are, whose constant struggle is to repress their rebellious physical energies, and to come among the quiet sedentary and docile race of these islands, is a grateful relief to the nerves of the worn teacher. When, however, the instructor has youth, and exuberant health and spirits, he would gladly exchange a little of the easy submissiveness and docility for a little fire and energy which he misses so much.

The professional teacher comes to Japan with great expectations. In all the typical virtues of the scholar, he expects the young native to be superior. In his work, the teacher hopes to find the happiness that is to compensate him for his exile from home and congenial associations.

Nor are his expectations too great or doomed to disappointment. He meets as noble young men as ever thirsted for knowledge. He finds that he has but to point the way, and his pupils follow. Their perfect trust and confidence in him is as beautiful as their diligence is commendable. It was once said that Japanese youths were fickle, that they changed teachers as often as the moon her form. If this were true in the past, it is not so now, at least in the government schools. The *Mom Bu Sho* have acted energetically in this matter, throughout the country, and deserve all praise for having enforced their rules requiring a student who enters a school to remain for a term of years. More than this, the very 'native officials' whose ability to plan and execute a scheme of foreign learning, we deny, and whose utter unfitness to make

rules for foreign teachers and to have charge of educational matters properly so-called, we think we have demonstrated by facts, have shown themselves fully able to be the strict wardens and the kind and careful governors of their students in all that is outside of educational matters. In the government of the students, after they leave their foreign instructors, we see little to condemn, and much to commend. The 'native official' has demonstrated his fitness to administer discipline, and to provide for the daily need of the boarding pupils, and to administer the economics of education. He has done his work; the cost being considered, far better than a foreigner could do it. From the chaos of three years ago, to the order, regularity and discipline of to-day, is a change that must be as gratifying to the *Mom Bu Sho* as it is to their foreign servants. The Japanese student of the present no longer scrapes along, untidy in summer and shivering in winter, but comes to school clad as comfortably and appears with as much dignity, all the facts considered, as a critic could desire. The Schools of Tokei are rapidly approaching that point when the precision, punctuality and discipline observed, will challenge comparison with the best of Europe or America.

The average Japanese student is bright, quick, eager, earnest and faithful. He delights his teacher's heart by his docility, his industry, his obedience, his reverence, his politeness. In the course of five years, the writer can remember no instance of rudeness, no case of slander, no uncanny trick, no impudent reply, from any of his many pupils. Some teachers complain of deception and lying practised by their pupils; with them, we cannot from experience join. Indeed, in almost all the gentler virtues, in abstinence from what is rude, coarse and obscene, the average Japanese school-boy is rather the superior of his *confrère* in the west. In the hereditary virtues of respect to superiors, obedience, politeness, and self control, he is unquestionably the superior. On the teacher's first entrance among Japanese students who are unused to foreigners, he may notice some peculiarities allowable in the Japanese code of etiquette, but repulsive to him, but these soon disappear or cease to annoy. In fire, energy, manly independence, and all those positive virtues which are exhibited in action and not in abstinence, the Japanese student is quite inferior to the western student.

In intellectual power and general ability, we are very much inclined to believe that the average Japanese student is the equal of the average western student. Even in the perception and conception of abstract ideas, we are inclined to think him not inferior, provided his knowledge of the vehicle employed, i.e. the language, be equal to that of his rival. We have had two years of experience and observation of Japanese, American and English students in the same class, and have not been able to detect any difference in their capabilities. Whether the Japanese student can hold his equal way through the highest studies of a foreign university, whether he can go beyond a certain point, and win independent conquests by his own intellect with ability equal to that of the foreigner, is a question not yet ripe for solution. To express any positive opinion on this point would be presumptuous, and would be almost tantamount to a decision of the question whether the Japanese intellect is peer to that of the Anglo-Saxon. Some Buckle or Lecky may decide the question a century or two hence, but its discussion can have no practical value at present. The necessary data upon which to found a conclusion must be furnished by the future. They certainly cannot be found in the past.

It has been hard to hold the critic's pen while writing this article. We have striven to express unbiassed truth, though many happy, many sad, memories have sorely tempted us to write only as admirer and friend. There seems no grander no more sublime sight than we have seen in the youth of Japan leaving home and country to go to other lands, and there deny themselves comfort and ease to master the languages that would open to them a new world. We have seen them nobly toil, feeding the flame of their intense devotion with their own life's oil. One, two, three, a half-score, have we seen consume with the passion for knowledge, and dying, regret not their loss, but that of their people, to whom they had hoped to bring back the sacred fire of knowledge, and to kindle and pass on the torch in their own dearly-loved, but darkened land. Some of their sepulchres are with their people, and some are on alien but kindly soil. As critic, as friend, we praise the living; but of the dead, what shall we say? There can be spoken no word so eloquent as their tombs. There can come to their native land no honour greater than their ashes and their fragrant memories. Abroad, there can nothing speak more eloquently the praises of their country, there can be no art or monument embodying the new life of Japan more grandly, more solemnly, than that burial lot in the quiet college-city of New Brunswick, with its six marble shafts, on which are chiselled names strange to the sculptor, but familiar to the fellow-countrymen of those who sleep beneath.

To the dead, all honor; to the living, all deserved praise! The foreign teacher in Japan, though discouraged and weary, finds his joy, his daily cheer, and his exceeding great reward in his students. To have led the humblest sons of Japan over the arduous road to knowledge, and thus to have helped on the civilization of this very interesting people is an honor, even though his masters begrudge him appreciation or thanks. Whether in social exile in the interior, away from the stimulating energies and social pleasures of civilized life, or whether annoyed by men whose necessity alone tolerates him, the honor of being a teacher of such eager and grateful pupils must be and is sufficient.

#### THE SHIMONOSEKI INDEMNITY.

SOME three years have elapsed since we laid before our readers a very full account of the circumstances which led to the claim by England, France, Holland and America which is commonly known as the Shimonoseki Indemnity. The conference at which its details were agreed upon was held in Yedo in October 1864, and the Convention then made was in the following terms:—

##### ARTICLE I.

The amount payable to the four Powers is fixed at 3,000,000 dollars. This sum to include all claims of whatever nature, for past aggressions on the part of the Prince of Nagato, whether indemnities, ransom for Shimonoseki, or expenses entailed by the operations of the allied Squadrons.

##### ARTICLE II.

The whole sum to be payable quarterly in instalments of one-sixth, or 500,000 dollars, to begin from the date when the Representatives of the said Powers shall make known to the Tycoon's Government the ratification of this Convention and the instructions of their respective Governments.

##### ARTICLE III.

Inasmuch as the receipt of money has never been the object of the said Powers, but the establishment of better relations with Japan, and the desire to place these on a satisfactory and mutually advantageous footing is still the leading object in view, therefore if His Majesty the Tycoon wishes to offer in lieu of payment of the sum claim-

ed, and as a material compensation for loss and injury sustained, the opening of Shimonoseki, or some other eligible portion of the Inland Sea, it shall be at the option of the said foreign Governments to accept the same, or insist on the payment of the indemnity in money under the conditions above stipulated.

It will be observed that by the terms of this Convention the European Powers reserved to themselves the option of accepting commercial advantages as a commutation for the payment of money they did not desire to take, and to the taking of which great and obvious objections attached. But the Japanese declined to open any portion of the Inland Sea and elected to pay the Indemnity, requesting at the same time that some delay should be allowed them. After much negotiation and the offer of various alternatives by the four Powers the first three instalments were paid, the last with a difficulty which no attempt was made to conceal. But when the fourth became due, the Japanese discovered that their resources did not admit of their paying it, and after making a full explanation of their position they were informed in 1867, that two years from that date would be allowed them for completing the payment, which should meanwhile bear interest at the rate of five per cent. Meanwhile the civil war broke out, the Shogunate fell, and the Mikadoate resumed those active functions of executive government of which it had been deprived for six hundred years. To provide funds for the struggle the currency had been debased, a vast quantity of paper money the redemption of which was wholly uncertain, had been issued, and any further payment of the Indemnity was impossible. In its place certain concessions were made in the Tariff and the payment of the remaining moiety of the Indemnity was deferred until 1872. Up to this moment no further payments have been made, and a sum of upwards of two millions of dollars is now due from Japan to the four Powers who were parties to the Convention of 1866. What will be done in regard to this question?

In closing the necessarily lengthy account we gave of all the negotiations connected with the claims of the four Powers interested, we made a strong and earnest appeal to their Representatives to urge on their respective Governments the remission of this claim, and we must ask the pardon of our readers for reproducing this elsewhere in our columns. For, indeed, we feel warmly upon the subject, and cannot endure to think that a sum so insignificant when divided among the four Powers, but so large for this country to pay, should be now demanded of, we had almost said, extorted from, it. True, it is, on the one side, an obligation, and must therefore be recognised; and on the other, a lever, and therefore will be used as such. There is no escape on either side from these positions, and it would be mere weak sentiment to imagine that the entire advantage of the creditor should be waived at a moment like this when he has the right to demand payment of his debt or to insist on an equivalent for it.

But there are claims which, though within the strict letter of the law, it hardly becomes a generous man or generous nations to make, at least in their entirety, and this has always seemed to us one of them. It were well if an alternative were offered by one party, and accepted, even though at something of over-valuation, by the other. The claim is not for money lent or for injuries to property unrepaired. It is rather in the nature of punishment for acts foolish rather than culpable, the fruits of a policy, to be regretted, indeed, yet inspired by motives neither mean nor dishonourable. But the infliction of punishment long after an offence, and when the mind of the offender is in a wholly different frame from that in which the wrong

was done, is a duty from which the mind naturally recoils, and while Japan is bound to present a sin-offering, as it were, the offended Powers should not be extreme to determine its exact value, or to reject it because its arithmetical relation to the ancient injury is not that of an absolute equivalent. The action of the American people on this question, though perhaps defective inasmuch as it was taken without concert with their allies, has been marked by a just and generous spirit towards Japan. A Bill has passed the House of Representatives and is now before the Senate, to absolve Japan from the claim, and stipulating only that the money shall be devoted to the purposes of national education. No such motion has yet been made in the English Parliament, because the matter remains for settlement, as it doubtless will remain, in the hands of the Foreign office. But we can answer for the mind and feelings of the nation, were this question submitted to it. England thoroughly dislikes indemnities. They are little in harmony with her policy of peaceful commerce, and have in them something of a flavour of blood-money from which her humane disposition recoils. France, though stern if not cruel in war, is never sordid or mercenary, and loves to make concessions which flatter her pride and accord with the generous sentiments which the best of her people feel, and all like to have ascribed to them. Her Treasury may be low after her unparalleled misfortunes, and money may have an extraordinary value to her at this moment. Yet she would smile at the idea that a half a million of dollars would be any object to her, and blush hereafter to reflect that the general line and character of her policy should have been deflected by present need or such slight assistance as the payment of an old fine could afford to her Treasury. Holland is far too rich to make any object of the Indemnity money, nor have we any idea that she is not sufficiently generous or prudent to accept even an overrated commercial equivalent for it. It is more than whispered, indeed, that the two latter Powers are disposed to press for the payment of the sum actually due to them on this claim. If so, we earnestly trust their Representatives in this country will make one more appeal to their respective Governments for discretionary powers to deal with the claim in a generous and humane spirit. Japan doubtless has no wish to appeal *ad misericordiam*, and rather than have the bill of harsh creditors constantly hanging over her head, she would possibly make a tender of her debt and have done with it, at whatever distress to her Treasury, disturbance to her programme of progress, and expense to her people. Yet, how could we deal with such an offer? Neither America nor England could accept the money. The overtures already made by the one, and the indisposition of the other to extort it, express the real sentiments of their respective peoples. Too many old indemnities, the records of which disfigure our history, afford little of pleasing retrospect to the students of the past. Let it not be said that we are going to furnish another unnecessary illustration of the law that progress in Asia comes only through the distress and travail of the Asiatic nations under our hands. If nature has ordained any such harsh laws, let us at least be merciful administrators of them, and so temper our conduct as the instruments of this inscrutable decree that our processes may illustrate and foreshadow her beneficent ends, and that when History traces the progress of our intercourse with this country she may do so without remorse or even regrets. Strictly just it may be that this money should be claimed; generous it cannot be. The strong may at times

be compelled to coerce the weak, and we do not impugn the justice of that policy of the Allies which led to this claim for Indemnity. But when the struggle is over and the recollection of it has died away with the generation which instigated it; when intervening troubles have almost obliterated this recollection, have swallowed it up in greater distresses, and added fresh perplexities to those who have to provide for the penalty of the old offence; then comes the time for generous consideration and concession.

But on the side of the foreign claimants it may fairly be urged that generosity from one party demands reasonable compliance from the other. The Japanese must not forget that the claim of the foreign Representatives is a real one, however leniently they may be disposed to deal with it. The foreign Powers demand nothing as an equivalent which has not in it the seeds of benefit to this country as of advantage to the Western nations. The concessions expected by the West may demand some modifications of the existing administrative machinery, but the trouble this may cause should not be a bar to the granting of them. Grave disappointment will assuredly be felt in Europe and America if the cordial extension of friendship to Japan and the favourable opinions which have been formed respecting her should now seem to have been based on a misplaced confidence, or on a desire for progress which she abundantly professes yet to which she hesitates to give full effect. We shall not pretend that such a policy has not serious difficulties attendant on it. But we shall not pay the statesmen of this country so poor a compliment as to suppose they are unable successfully to cope with them.

The payment of the Indemnity we cannot endure to think of. To us it means increased taxation, possibly a new loan, restricted facilities for education, the delay in important if not necessary Public Works, discontent, possibly disaffection or rebellion among the people, disappointed hopes and retarded progress, and all this we dread and greatly deprecate. Whatever tardiness in action the Government may at times exhibit, no one can come in contact with the youth of this country without seeing that there is among them an ardent desire for increased light and knowledge, and that if proper means are employed for giving these to them, a wonderful revolution and advance will soon take place in the condition of this country. We dread to see any steps taken which threaten to endanger this. We dread to see the country thrown back and all the ardent hopes of these ardent youths disappointed. We are writing in no overstrained terms of them, much as there may be on the surface of things to throw doubt on our views. The hopes of this country lie greatly in the maintenance of the present movement, and so much do we dread any interference with it, that we earnestly deprecate on the part of those whose policy might influence it adversely, any line of action calculated to disturb or diminish it.

#### THE TELEGRAPHS.

THE dissatisfaction long felt by the Public in regard to the working of the Telegraph line between this and Nagasaki may be permitted to explode with special appropriateness at a moment when, after several recent break-downs, an announcement has been made that the tariff is to be raised about fifty per cent. It is perfectly true that had the line been worked with entire success, a rise in the scale of charges would still have been distasteful; yet the sense of anger would not have been so deeply stirred as after a course of alternate failure and success in

which the ratio of one to the other reminds one of the immortal 'O monstrous! but one half-penny-worth of bread to this intolerable deal of sack!' There are institutions like individuals which seem cursed from their very conception. The blight of an original sin is upon them. If not 'shapen in iniquity,' they seem to have been predestined to shame in their youth and scandal in their maturity. They are born to wear the white sheet of a perpetual penance, and sit on the cutty-stool of an endless yet unavailing repentance. Reproach excites in them no shame, remonstrance produces no remorse, chastisement no amendment. They live on their misfortunes—like Puff—and turn calamity into revenue. Their habitual dress is a robe of tatters, their gait a limp or a nobble. The only efforts they seem capable of are those which bring disgrace, and the powers which other men employ in raising themselves lead these into snares and pitfalls.

The Telegraph appears to be one of these institutions. It is always in difficulties. It was born with a stammer and has never spoken plainly. Whether the seat of disease is the brain or the nervous system communicating with it, we know not; all we know is that its intervals of coherent speech are constantly interrupted by an unintelligible gibber, or by 'flashes of silence' which possess none of the charms attributed to those phenomena in the exuberant conversationalist who exhibited them. In all other countries the correct and rapid transmission of an electric message may as certainly be relied on as the passage of a letter through the post, or the departure and arrival of a railway train. In Japan it is otherwise. No security exists that your message will go when you despatch it, or arrive at its destination at the proper time. The only certainty is that you must pay for it; beyond this all is as obscure as Buddhism and as uncertain as law. Sometimes it is said that the line is broken; sometimes that the inexperience of the operators is the cause of delay or failure; sometimes the instruments are out of order; but constantly there is some break-down which demands explanation and excuse.

Now, really, this should not be; and in the interest of the Government as well as of the public we wish to draw serious attention to this subject, because the former acquires a bad name through this mal-administration, while the other is perpetually inconvenienced by it. As soon as telegraphic communication is established by a Government or a corporation and advertised as thrown open to the public, responsibilities and obligations of a serious nature commence, and these must be met and fulfilled with punctuality and certainty. Excuses for failure or explanations of the causes of it are of no avail. A contract has been virtually entered into between the two parties, and its first condition is that the line shall be maintained in Working order. The time for talking about difficulties has passed, and it is mere mal-administration which is to blame for subsequent short-comings. It is currently reported that the Japanese refuse to take the advice of their foreign skilled assistants; that among these there is a great want of harmony, good feeling and understanding; that the native operators no sooner know their work than they are removed to make way for others who do not know it; that instruments which are by no means of a very delicate or intricate nature are constantly disorganised by ignorant or reckless handling which causes great expense for repairs and creates delays in the transmission of messages; that faulty engineering in the laying of the lines is a fruitful source of failure, and that materials have been used in the construction of the works

which are unfitted for the duty. We shall not profess to know how far these charges are true. But there are certain well recognized courses which are customarily pursued when advice is unheeded and men are deprived of all power to carry out their views and to secure obedience to their authority. No man can with self-respect or dignity continue to occupy a post in which his advice is set at naught, his remonstrances are unheeded and his authority is disregarded. If an investigation into and a Report upon all the circumstances, embodied in a strong and respectful Minute to the Minister of the Department, fails to secure attention and produce reform, there is only one course to adopt, and this must suggest itself to every man who has a proper sense of his own dignity and a feeling of the obligations attaching to his position.

It is not long ago that we contrasted the respective modes in which the Chinese and Japanese treat their skilled employés. The former take great pains in selecting them, instruct them as regards what they require to be done, and then leave them to do it. The consequence is that they secure good men and excellent results. The Japanese, on the other hand, with an eagerness and confidence for which they cannot be greatly blamed, but which has led them into serious errors, have been too often unfortunate in their choice of assistants, and have thus learnt to meddle so much with the proceedings of foreigners in their service that when they really get a good man they hardly know how to manage him. That their bad servants have made them in many cases bad masters is clear from the fact that to one whom they have really learned to trust they give a large measure of confidence and permit a fair sphere of untrammelled action. The *personnel* of their Telegraph Staff is said to be good, and though possibly too small for the thoroughly efficient working of the line, its efficiency would be largely increased were it more entirely trusted.

We have not gone into the details which attach to this question; such as the double charge for code messages, a practice entirely abandoned in every other country; the charge for the words "Registered Message" as part of the message; or the necessity for permitting no further delay in placing Yokohama in direct communication with the rest of the world without the now necessary intervention of agents at Nagasaki; though of all these things the public complains bitterly,—leaving to us, however, the task of representing their grievances. Our object has been mainly to draw attention to a grave source of public inconvenience, loss and annoyance, and to induce the Japanese Government to reform an administration which at this moment is bringing them into great and deserved disfavour among foreigners, whose good opinion is more valuable to them, even in a mere pecuniary sense, than they may either imagine or care to acknowledge.

The line has now been opened for some time, the causes of failure and complaint must be well known, there are skilled employés in the service who are thoroughly conversant with their duties, the work itself is of no new and uncertain nature, and it is a grave reflection upon the administration, indeed, upon the Japanese character and reputation, that failure in this direction should be so helpless and so glaring.

#### THE DEPARTURE OF MR. WATSON.

THE Ball given to Mr. R. G. WATSON on Friday evening last was not a mere formal compliment paid to an official who was leaving Japan after having occupied with credit to himself and advantage to his fellow countrymen an honoured post in the service of the British

Government. He has indeed done this, and proved himself a man in whose judgment, firmness and conciliatory manner and temper his countrymen here have learnt to place great confidence. But the tribute paid to him on this occasion was rather, we think, a testimony of regard and esteem to one whose hospitality has been widely enjoyed, and whose invariable courtesy, accessibility, and liberality of word and deed have secured for him a large amount of very sincere regard and esteem. He has not only known how to discharge his public duties in a manner which was not the less thorough because singularly unpretending; but he has identified himself since his arrival here with the welfare and interests of our small community so warmly, so naturally and easily, that his acceptability has certainly demanded the public recognition it received on Friday evening, and lays us under the somewhat delicate obligation of paying our own tribute to him while he still remains among us.

Mr. WATSON arrived in Japan with a record already far from undistinguished. Originally an officer in the Indian Army, in which he served on the Staff of the late Sir JAMES OUTRAM in the Persian Gulf in the war of 1857, he was appointed to the Legation in Persia in June of the same year, but soon afterwards received orders to join his Regiment on the outbreak of the Indian Mutiny. The bent of his mind, however, being towards civil employment, he resumed duty at Tehran, and having previously made himself master of the Persian language, he collected while there the materials for his work, *The History of Persia from 1800-1858*, which takes up the narrative of Persian history from the period at which Sir JOHN MALCOLM left it, and continues it down to the time of the expedition in which Mr. WATSON was himself an actor. This work, which is remarkable alike for the breadth of its outline, the fulness of its details, and its merits as a literary composition, obtained for its author an acknowledged position as an authority upon the subject he treated, and remains a monument of the industry and accomplishments of a member of a class of men to whose culture the world owes much for the abundant and excellent fruits it has produced, and to whom England is under heavy obligations for the services they have rendered her. Mr. WATSON, made a similar excellent use of his spare time, while Secretary at Athens, to edit Murray's *Hand-book of Greece*, a work which demanded great labour, extensive reading and research, and an accuracy capable of defying the hosts of men in England whose knowledge of Grecian history and archaeology would have enabled them instantly to detect errors from which no writer could save himself except by a large mastery of his subject. It is not our intention to enumerate the other posts which Mr. WATSON has filled in the service of the British Government, and we have traced his record only so far as it has identified him with labours which we peculiarly delight to see associated with a Civil Service of which, as Englishmen, we are justly proud. But his career had been varied and active before his arrival in this country. He had seen many lands and many men. His mind has been matured by study and developed by ample experience in those higher departments of official work which necessitate accurate thought and the employment of accurate language. He had been a man of action, a writer, a reader, and a thinker. With these preparations he came to this country, and soon showed that as he had risen with a natural buoyancy to a position of responsibility, he could float in it with ease to himself and with advantage to the Power he represented. A fortunate combination of circumstances, adroitly

seized, enabled him to carry a point at the Court of Yedo which was not without value, and which paved the way for a change in the ceremonial observed at the reception of Foreign Envoys, who had on several previous occasions found cause for some dissatisfaction at the manner in which they had been received. Not many months afterwards, the now famous case of the *Maria Luz* arose, and the action of Mr. WATSON showed that he was in active unison with that axiom of our national policy which makes the slave a free man the moment he comes within the sphere of British protection. The action taken by the Japanese Government at this juncture must have been largely influenced by the position assumed by Mr. WATSON in dealing with the coolies who had sought the shelter and protection of a British ship-of-war; and although the ultimate solution of the whole case is yet doubtful as regards the more obscure legal technicalities it involved, the conjoint action of the Government of Japan and the British Chargé d'Affaires drew such an amount of attention to the details of the Coolie Trade, its iniquities and attendant horrors, that a marked advance was made in the position of its opponents. It received a tremendous blow, all the more telling that it came from the youngest member of the comity of nations, and the negotiations to which the case gave rise stirred the Court at Peking to active expressions of gratitude and satisfaction, all the more remarkable from the rarity of such manifestations. In dealing with this case Mr. WATSON assumed grave responsibilities and evinced an unswerving firmness of purpose, but his action was supported by Lord GRANVILLE after a full investigation of the case by the legal advisers of the Crown, and he became honourably identified with an occurrence which has rendered a marked service in the cause of humanity. The arrival of Sir HARRY PARKES not long after this period removed the active charge of British interests from Mr. WATSON's hands, and his more prominent position was merged in that of his Chief. Yet we believe he has since then occupied himself in addition to his routine duties, with the making of some Reports upon various questions of interest connected with the progress of this country, which cannot fail to throw light upon them, and may, as we trust, conduce to its benefit and progress. Thus far as regards Mr. WATSON's career in his official capacity.

As a member of the community we must not forget among his services that he was the first, and always an active, President of the Asiatic Society, which was inaugurated under his auspices, and at whose meetings, whether as President or Member of the Council, he was a regular attendant, ever ready with sound suggestion or advice, useful information and well-weighed opinion.

And now we must take leave of him. We wish, indeed, that custom would adopt some more enduring form of compliment than that of a Ball; but we shall not quarrel with a fashion which at least brings together in cordiality and good-will those to whom the honour is paid and those whose pleasure it is to pay it. Mr. WATSON may not be sorry to leave Japan for a more interesting sphere of work, but he will hardly leave it without regrets; and on the side of those he leaves behind we can assure him that many sincere wishes for his advancement and welfare will accompany him.

## NOTES OF TRAVEL.

## ÔYAMA AND ITS NEIGHBOURHOOD.

Ôyama is the most celebrated, if perhaps not the highest, mountain in the province of Sagami. Seen from Yokohama it lies a little to the right of Fuji, while from Yedo it appears a little to the left of that volcano. The best route from Yokohama is by the Tôkaidô, passing through Hodogaya, Sakaigi (the pleasant resting place at the mutual boundary of Musashi and Sagami), Totsuka and Fujisawa. At the eastern end of this latter town is a Buddhist monastery called Fujisawa dera, which is worth visiting on account of the exquisitely painted screens in some apartments occupied by the Mikado on his journeys between Kiôto and Yedo. The best of these are the winter-scenes, in which the wild-cherry and pinaster are represented covered with snow, the maples in leaf and wild-cherries in full blossom. The monastery was founded in A.D. 1,275 by Yûgiô Ippen Shônin, a famous Buddhist saint, who was originally a *samurai* of the province of Iyo. His conversion is said to have come about in the following manner. One day as his beautiful wife and mistress, whom he loved equally well, were lying together with their heads on one of those low tables used by the Japanese for the game called *go*, he dreamt that he saw their hair change to snakes, which bit each other, and fearing the effects of the jealousy thus revealed he became a bonze. Some eleven years later, he visited Kumano in Kishiu, where he constantly called upon Amida, and spent whole nights in prayer for the welfare of the human race. This devotion was followed by a vision, in which a priest appeared to him and said to him: "All living creatures who make use of the prayer 'Namu Amida Butsu' shall become perfect *Buddhas*. Do you teach 'and convert them.'" On waking from his dream he took a disciple named Da Amida Butsu, and travelled with him throughout the length and breadth of Japan, teaching this blessed truth to young and old, male and female, until he came to Fujisawa, where he built a monastery. He died at Hiôgo in Setsu in the year 1289. Down to the present day the incumbent of this monastery unceasingly travels through Japan, preaching the doctrine of the founder.

The inns at Fujisawa most frequented by foreigners are the Kaméya and Tomoyôya. The Minatoya close to the bridge is kept by a civil hostess, with but a scanty knowledge of the Yokohama dialect.

About a *ri* beyond the town, at a village called Yotsuya, the road to Ôyama branches off to the right under a large stone *torii*, or Shintô archway, which is a sufficient indication for those travellers who cannot read the inscription on the column at the corner, "Ôyama michi." *Jinrikishas* can go as far as Koyasu, the last village before reaching Ôyama, but during the last stage, which traverses a paddy field district, the bridges are often so narrow that the nervous passenger is forced to alight if he objects to being lifted over. Ichinomiya (2 *ri* from Fujisawa) is a small town close to the shrine of Samugawa, the *ichi no miya* or chief *shintô* temple of Sagami. The river Baniu has to be crossed by a ferry immediately afterwards. On the opposite bank lies the insignificant village of Tamura, where the traveller is usually expected to make a halt, or *tateba*. The Tamagawa at Isebara (2 *ri* from Ichinomiya) is to be recommended either for the midday halt or as a lodging for the night, as it possesses a suite of rooms at the back, from which there is a fine view of the Ôyama range. From Yedo there are two points of departure for Ôyama, namely the Akasaka Gate and Mita. The two roads unite near the left bank of the Tamagawa opposite to Futago. Mizonokuchi, just beyond, is the 2nd stage from the Akasaka Gate, and is convenient as a resting place for the noon meal or at night. The road passes on through Tsuruma and Atsugi, and joins the other route at Isebara.

Koyasu is 1 *ri* beyond Isebara, at the actual foot of the range. In this village, or rather street, are two temples painted bright red dedicated respectively to Kannon sama (the Indian Avalôkites'vara), and to the Japanese Buddhist god Jizô sama. The posts which support the front of the roof at each of these temples are gradually being cut away by superstitious pilgrims, who believe that the chips act as charms; and in order to give

an idea to the public of the number of actual believers in past times, the former posts, cut away at the centre until they were no longer able to support their burden, are still preserved tied up to their successors. The street becomes gradually steeper, as the flights of steps approach each other and become more numerous, and as there no break between Koyasu and Ôyama village, the traveller may find himself at the latter before he is aware of it. Komaya and Ôtsuya, which stand on opposite sides of the street, are the best inns, but there are others further up. Those of the inhabitants who do not keep inns seem to be occupied in making or selling various kinds of wooden domestic utensils, very much like those which form the staple of Yumoto and Hata on the Hakoné pass.

A little way beyond the inns above mentioned a stream rushes out of a hole in a rocky wall some twenty feet high and falls into a pool at its foot, in which it is considered highly meritorious to bathe as long as the cold douche can be endured. From this point the rapidly ascending path is close to the stream on the left bank. The houses on the right bank seem to be inhabited by a mutually exclusive set of people, for instead of having a path along their side of the gulley, each householder has his own private and separate bridge by which he communicates with the world on the other side of the water. At a second bathing pool similar to the former, the douche is made to issue from the mouth of a huge bronze dragon who leans half his body over the rock, and holds in his right claw a tablet with the words *ni gumi*, showing that he is the offering of the fourth brigade of firemen at Yedo. From this spot looking back there is a pretty glimpse of the sea near Kamakura.

Some way further up the entrance to the sacred domain is indicated by a *torii* of unpainted wood perched on the top of a flight of steps. It bears on its front the legend "*Afuri Jinja*," the 'shrine of the God of Afuri,' in brass letters. The pilgrim has here a choice of evils. If he pass under the *torii* and ascend the steep steps on the right, he finds himself committed to one of the hardest pieces of climbing in Japan, up a continuous series of steep flights of high steps, with small landing-places where he will feel compelled to stop and take breath. This is the *Otoko-zaka* or 'man's hill.' By taking the path which passes below the *torii* to the left he avoids a good deal of hard work, but saves little in point of time, besides feeling a certain amount of humiliation if he knows that he has chosen the *Onnazaka* or 'woman's hill.' Both paths unite at a considerable altitude at a spot where stands a Buddhist temple, destined shortly to be pulled down and carried to Minogé to become an inn. In former times when Ôyama was owned by the Buddhist priesthood, the incumbent seems to have lived here. The revenue of the monastery consisted of the tax on lands assessed at 300 *koku* of rice, besides the contributions of the pilgrims, and it must have been a well-to-do community, as it possessed altogether twenty-eight dwelling houses. The view from this point includes the plains of Sagami and Musashi with the Baniu river, Capes Sagami and King, Enoshima, the sea, and the higher mountains of Kadzusa (probably Kanozan).

Some flights of regularly cut steps lead from this up to the chief temple. The stone foundations which still remain show that a Buddhist temple stood here recently, but the hand of the iconoclast has been at work as in so many other famous spots in Japan, notably Kamakura, Hakoné and Enoshima. A Shintô temple is in course of construction, of which only the *haiden*, or hall of worship, is as yet completed. In front of it at one side stands an enormous two edged sword of bronze, planted with its hilt in the earth. Inside is hung a gigantic sword of the modern pattern which dates from the beginning of the present century. Two mirrors suspended on the screen are said to be offerings made by devout believers.

The God worshipped here was until recently known as Fudô Miô-ô, but after the restoration of the Mikado it was discovered that the Ôyama temple was one of the ancient Shintô foundations, and the false name was thenceforth abolished. According to the information furnished by the *Kannushi*\* the deities now worshipped are Ôyama-dzumi no kami, Takaoka-mi no kami and Ôika-

\* A general name for Shintô priests.

dzuchi no kami. The first of these is the God of mountains in general, the second is the dragon, or God of rain, snow, storms, &c., and the third is evidently the God of thunderbolts. A more reliable statement is that the chief deity is Iwanaga hime,—sister to Konoha sakuya hime no mikoto, the goddess of Fuji no yama,—and it is confirmed by the fact that under the old regime the deity worshipped was called Seki-son Daigongen, the first part of which is the Chinese for *Iwa*; and the symbol of this goddess (*shintai*) is in fact a large stone which is preserved in the shrine at the summit. The inhabitants of the neighbourhood still continue to use this latter name, which they abbreviate into Sekison san.

On the left of the shrine is a stout wooden palisade, enclosing a handsome bronze *torii*. The gateway is only open to the Japanese pilgrims during the month of June, but foreigners are allowed access by a small wicket. From here to the summit of the mountain is said to be a distance of 28 *chô* or about two miles. It is a moderately steep ascent, and as there are platforms at about every two *chô* where the pilgrim may rest to drink tea and enjoy the gradually expanding prospect, the fatigue need not be great. The *chô* stones cannot be relied upon as indications of the exact distance made, but perhaps every fifth one is on the average in its right place. At the 16th *chô* from the top is a tall stone with an inscription indicating that it was erected in honour of Sekison Daigongen by the inmates of the Yedo Yoshiwara. A path from this point leads down to the village of Minogé, 50 *chô* distant. During the ascent, Fuji no yama is visible at several turns of the path and at one place where he appears towering above the Tanzawa range the Peerless Mountain looks very grand. The whole of the mountain is not visible from Oyama, as a high range intervenes.

On arriving at the summit (*chôgô*) the first feeling is one of disappointment, for there is absolutely no view to be had but by climbing up the scaffolding which surrounds the dilapidated shrine, as the mountain is covered with thick bamboo brake taller than a human being. From the scaffolding can be seen the wooded top of Tanzawa yama, separated from Oyama by a single valley, the hills amid which nestles the village of Miyagase, and far away to the north the peaks of Nikkô. Tanzawa is said to be, and indeed looks, higher than Oyama, the height of which according to the barometer carried by the writer is 4100 feet. A little below the front entrance to the shrine there is a fine view over the sea towards Vries, Enoshima &c. A broad space has been cleared in the brake all round the shrine at some little distance, with the object of protecting it from the mountain fires, but there is no view to be had from this either, unless it be on the east side. The most curious thing here is a sort of dust-bin full of pieces of pine cut into the shape of sword blades, on which are generally inscribed "presented to the shrine of the god of Afuri" with the addition of "for the success of an earnest prayer." Afuri is said to be a contraction of *Améfur*, rain falling, which was the ancient name of this mountain in the mouths of the dwellers in its neighbourhood. The ascent will take a fair walker about three hours from the inn, including a plentiful allowance of breathing time by the way.

The descent to Minogé is somewhat longer and steeper for a great part of the way, but as the path is hardly at all encumbered by stones it is less fatiguing, though perhaps rather muddy after rain. Not far from the 16th *chô* stone mentioned above it issues on to the grassy side of the hill, where there is a charming view of the Oyama village nestling in the narrow valley. It seemed as if a handful of tea-house seed had been thrown down at the head of the ravine, whence it was carried down by the stream to take root on its banks.

Minogé is a small village situated at the head of a wide valley formed by a spur of Oyama and Atagoyama, which is continuous with Tanzawa yama. The best inns were destroyed by fire in November of the present year, and the remaining accommodation is not good. It may be reached from the village of Oyama by a path which crosses the shoulder of the mountain. If the traveller is not wary high charges will be made for coolies for this short distance, which is not more than 2 *ri* at the outside; and as it is the practice in the country districts always to ask what was paid under this head on the last stage in

order to have a basis for calculating the charge for the next, it becomes of importance to resist extortion from the first. These remarks do not apply to travelling on post-roads, where there is always a fixed tariff, easily to be ascertained.

From Minogé a road leads down the valley to Tôka-ichiba (or Soya) from which the Tôkaidô can be easily gained at Oiso or Odawara (6½ *ri*). But if the traveller's object be to make the circuit of Oyama, he must ascend the ravine at the back of the village by a path much damaged during the floods of last summer, and then climb the hill called Hatchô no dai. The view here is magnificent. On the extreme height is a grassy slope which conceals Fuji entirely from view. Next comes Ashidakayama, the lofty series of peaks which stand at the southwest of its base; then Ashigarayama, a sharp summit covered with trees: next Komagataké and Jigoku, the hills which line the eastern shore of the Hakoné lake; the double headed hill called Futago, between Ashinoyu and the top of the Hakoné pass, and beyond these the hills above Atami in Idzu. Far away to sea lie Vries (Ôshima), Rishima and Nijima, the first three of the chain of islands which stretch southwards from Idzu and terminate in the Bonin group. To the left over the spur of Oyama the crooked mouth of the Baniu river, the *eboshi* rock, Enoshima, Capes Sagami and King come successively into the field of view. On a clear day the plain of Musashi and bay of Yedo would be distinctly seen. Close under the feet lies the Minogé valley which has just been left, and the low hill land between Hiratsuka and Odawara, with its various streams.

At the back of Hatchô no dai the stream which flows past Miyagase down to Atsugi has its source. The descent is rapid for a few minutes, and the path then continues along the bottom of the valley to the small village of Tanzawa, which consists of some half dozen scattered huts. On both sides rise steep hills, covered with *kaya*, (the long grass used for thatch) and the broad-leaved bamboo brake. A path from Tawara mura, the only route now practicable for packhorses, joins the Minogé path near the head of the valley. Some way further on a path diverges to the left, crossing the stream, which leads by the hamlets of Bodaiya, Yokono, Tokawa and Hori to a temple on Tanzawayama called Sobutsu. The traveller must here take the less inviting path to the right if he wishes not to lose his way among the hills. The only respectable house in Tanzawa is occupied by the chief charcoal burner of the district, who adds to his other occupation the profession of a hunter. Both deer and wild boar are plentiful in these hills, and the average number of the former killed in a season is sixteen. The district formerly belonged to Egawa Tarozayemon, the well known *daikuan* of Idzu, but is now owned by a fuel-merchant and *saké*-dealer of Shinagawa. From Minogé to this house is said to be two *ri*. None but travellers who are satisfied with the barest accommodation should ever think of passing a night here, for the paper slides look as if they had not been repaired for centuries, and the owners possess but few spare quilts. Supplies are limited to the bare necessities of Japanese life.

From Tanzawa to Miyagase there is a choice of routes; the one by the stream, which involves wading across seven or eight times over a stony bottom, the other over the hills on the left bank; much longer but rather drier, as the torrent has only to be forded three times. Though it is not likely that any but sportsmen will ever perform this journey, it may be useful to describe it.

The path from Tanzawa proceeds along the right bank for some distance, say about a mile, and then crosses the stream by a rickety bridge made of young trees tied together with straw ropes and thrown across from rock to rock. On the opposite side the path divides into two branches, one of which goes through a wood close to the bank, while the other ascends the side of a steep hill covered with trees and thick brushwood. The highest point is reached after a climb of about 700 feet elevation, and the narrow path continues for a few miles along the side of steep earthy inclines through brambles and over fallen trees. There is no danger, but for clothing. At last the *Yenkemba* is reached, a spot where the Shôgun's officials used formerly to rest when they came on their periodical tours of inspection to these woods. There is a

fine view of three peaks called Mitsun no miné, and a grassy knoll called the Dragon's Race-course (Riu no Bamba) on the other side of a deep valley on the west. Down this valley, called the Hondani, flows a stream which unites with the Tanzawa torrent at a point further on. Behind, to the east, towers up Ôyama, and in a depression can be seen the cutting through which passes the route from Tanzawa to Suzugaya on the Miyagase road. From the *Yenkemba* the way descends through trackless woods, till at last it tumbles down the almost perpendicular side of a spur, and comes out on to the two streams at their junction. No stranger should ever attempt to walk from Tanzawa to Miyagase without a guide from either place. *Kagos* and ponies could not possibly be brought along the path. After fording the stream three times, or rather two and a half times within a hundred yards, the pedestrian must climb a steep hill, where he will find traces of the woodcutter's work for the first time. The favourite tree is the *momi*, which is chopped and sawn into small logs called *kaku*. These are floated down the torrent to Miyagase, where they are cut up into thin boards (*chôgi*) of about the thickness of mill-board, to be used afterwards in the manufacture of *ori*, a kind of box which takes the place of the paper bag with Europeans. The branches of the *momi* are converted into charcoal for the blacksmith's use.

But half of the distance of 14 miles has been now accomplished. The rest of the way is easy to find, and less difficult to the feet. It winds along the hills on the left side of the valley, following all the meanderings of the stream, and descends and ascends alternately with unfailing constancy. The last hill is called Daimochizaka, and shortly afterwards the traveller finds himself close to the temple in the village of Miyagase, which has now been turned into a hotel for the foreign visitor. Lovers of ferns will be charmed during this walk with quantities of maiden-hair and *Adiantum Macrophyllum*, which may be detached from their rocky seats with little trouble.

The route by the stream is more fatiguing. The ascents and descents are far more numerous, and the constantly repeated necessity of fording the stream is both annoying and painful. There is yet another way of reaching Miyagase, which consists in abandoning all known paths and jumping from rock to rock or wading through the pools up to one's waist when the rocks are too wet to afford a safe foot-hold. In this way the journey may be performed in three hours, while double that time is required by the ordinary route over the hills. No doubt the force of the stream quickens the footsteps. We are only acquainted with one traveller who has ever accomplished this feat, and to a certain extent he was compelled to it; for having gone through a narrow place called the *Seto* where the perpendicular rocks close in on either hand and the torrent rushes between them like a mill race, in search of a path, he found it impossible to return up the fall, and so plunged onwards. The people at Miyagase said that no Japanese would venture it without a companion, and that the men who had ever tried might be counted on one's fingers.

From Miyagase the usual way back to Yokohama is by Suzugaya, Atsugi and the Tôkaidô, but a pleasant variation may be made by taking the route through Toya, Seki, Nagatake and Nekonoya to Ogura (10 miles), where boats can be obtained to Tana, Atsugi or any other place down the Baniu river. The scenery as far as Ogura is pretty but tamer than that of the Tanzawa valley. About a *ri* from Miyagase the road turns off to the right from the Awonohara road at a stone marked "left Gunnai, right Hachôji," and winds down a valley which gradually widens and then closes again. At Nagatake there is a fine grove of cryptomerias surrounding a Shintô temple. From here to Nekonoya extends a flat table land planted with mulberries. Nekonoya lies just under a high wooded hill, covered with pines above and deciduous trees below. A road to Katsusé opposite to Yoshino on the Kôshiu kaidô, crosses here at right angles. To this village succeed woods, and the road here approaches nearer to the stream, which flowing between steep banks falls at last into the Baniu. Just before reaching Ogura there is a charming vignette view of the opposite bank of the Baniu, with the village of Oshima almost hidden among the trees.

At Ogura there is a ferry to the opposite side of the Baniu, and boats can be hired here of two sizes. The largest, which are called *takase-buné*, are manned by three men, and can be hired at from eight to ten *boos* as far as Atsugi. They are kept in a quiet part of the stream about a quarter of a mile below the village, close to a Shintô shrine (*miya*). Three hours are required for the voyage in ordinary seasons.

From Uyenohara on the Koshiukaidô the Baniu, there called Katsura gawa, flows between precipitous rocky bluffs, under lofty ranges of hills. At Ogura the bed of the river is closely confined between these bluffs, and continues to be so as far down as Tana, where it leaves the eastern bluff. At Atsugi both bluffs have disappeared, that on the right bank having imperceptibly diminished in height and faded away into the hills. The main current winds from side to side of the stony bed, often coming close to the rocky bluffs with a violent rush, at which times all the skill and coolness of the boatmen seem required to keep the frail craft from being dashed to pieces. The bluffs are covered with trees, bamboo, firs, and many other species both evergreen and deciduous, amongst which the maple is rendered most conspicuous in autumn by its brilliant masses of scarlet of varying tints, and as the rays of the setting sun fall on them, there is produced an effect of colouring which would rejoice the senses of the artist and move even the dullest in feeling.

At Atsugi the Mannenya, Ebiya and Kokuya are to be recommended. From the back windows of the latter two there is a good view of the whole range of Ôyama, with Tanzawa rearing his head behind. The distance by the directest route to Fujisawa, which lies across the fields, is four *ri* (10 miles), but is not practicable except for pedestrians and ponies. The *jinrikisha* takes a wider and more circuitous way down the right bank to Tamura, at which place the tourist who has followed in our footsteps will have completed THE CIRCUIT OF ÔYAMA.

#### THE PUBLIC HALL.

The meeting called by the Committee of the Public Hall to receive and consider the Report and Treasurer's Statement, took place last evening in the Hall. The attendance of the public was meagre. Captain Purvis, R.N., was called to the Chair, and Mr. W. H. Smith, acted as Secretary to the meeting.

The Chairman, after a few preliminary remarks, read the Report (which has already appeared in our columns), by which it is shewn that the gross receipts for the 13 months ending November 30th 1873, have been \$2,597.45, and the gross expenditure \$2,394.94, leaving a balance for disposal in the hands of the Honorary Treasurer of \$202.58, and this after the disbursement of the sum of \$818.67 cost of fitting building with gas, and of necessary properties taken over from the late Dramatic Corps. The handsome sum of \$1,351.45, received mainly from the Amateurs as proceeds of performances, constitutes the larger moiety of the gross receipts. In addition to the sums handed over by the Amateurs, the whole of the dresses, and other properties used in their entertainments, have been placed in the hands of the Public Hall Committee: these represent no inconsiderable sum, and together with the value of fittings and furniture above mentioned, the Capital Stock belonging to the Hall Trustees forms quite a respectable item as an asset. After reading the Report the Chairman said that they would agree that it was eminently satisfactory. The public were indebted to the Committee for their indefatigable exertions in providing a Public Hall for the Community.

It was proposed by Mr. Dare, and seconded by Mr. Wilkin that the Report as read be adopted. Carried.

Proposed by Mr. Wilkin, and seconded by Mr. Syle, that a vote of thanks be accorded to the retiring Committee for their great exertions behalf of the public. Carried unanimously.

The Chairman then said, that as the time for which the present Committee was elected had expired, it would be necessary for the public to proceed to the election of another.

It was then proposed by Mr. Isaacs, and seconded by Mr. Wilkin that the present Committee be requested to serve again.

Carried. (The whole of the Committee were present, with the exception of Mr. Tripp, and cordially agreed to the proposition.)

With reference to some enquiries which had been put by a gentleman in the body of the meeting, Captain Bridgeford explained the position of the amateurs who give entertainments in the Hall. They guarantee the Committee \$100 for each performance, besides the expenses of lighting &c. This they would pay in any case, even at a loss to themselves, but the entertainments had fortunately been a great success and had left a surplus, which the Committee received, and had in addition been put in possession of the dresses, properties, etc.

Mr. Smith remarking on the efforts of the amateurs to provide a Public Hall, suggested the consideration as to whether the present Hall was not too small, and proposed that a Committee of Three be appointed to make enquiries as to the cost of erecting a Theatre, not to exceed \$15,000, for which Captain Bridgeford would no doubt kindly furnish a plan. He proposed to raise the money by debentures, which the amateurs would no doubt be able to wipe off quickly.

Mr. Mitchell thought the public would like to see some security for their debentures, besides that of the amateurs.

The Chairman suggested that as the proposition was outside the object of the present meeting, another had better be called to consider Mr. Smith's proposal.

After some desultory conversation the matter was allowed to drop.

A vote of thanks was then accorded to the Chairman, and the meeting separated.—*Gazette*.

#### REPORT

##### TO THE SUBSCRIBERS TO THE PUBLIC HALL FUND.

GENTLEMEN,—The committee appointed by you for the management of this institution during the past year have the honour to lay before you their report.

The honorary treasurer's account shows a balance in hand of \$202.51; the gross receipts having been \$2,597.45, and the gross expenditure \$2,394.94. This latter sum includes two items, viz.: \$415.88 for the properties of the late Dramatic Corps, and \$401.79 cost of fitting building with gas; together a sum of \$817.67, which will not be incurred in future working. The sum of \$1,351.45 received from amateur and other performances, is exclusive of the cost of dresses, &c., all of which belong to the Hall, and form a valuable stock of properties. A donation of \$400, the proceeds of a performance given by a few gentlemen amateurs, to whom the thanks of the community are due, was made to the General Hospital.

The committee therefore trust that you will consider the movement has been fairly successful for the first year; on their part they feel confident that as the objects and principles of the institution become more widely known, more frequent amateur performances will not only increase the funds, and render the Hall self-supporting, without further subscriptions, but the public amusement will be more fully provided for.

When the subject of opening the Gaiety Theatre as a Public Hall was first mooted, a few members of the community were sanguine as to the success of the scheme. The Committee think these expectations have been fairly realised; for, apart from the state of the funds, and from the value of the buildings as a place of public amusement, theatre, and concert room, it has been made useful for public meetings, and though last not least, it has been placed at the disposal of the Ladies' Benevolent and all other charitable associations.

The Committee conclude with the expression of a hope that the future working of the Public Hall will leave a balance of cash sufficiently large to render substantial and timely assistance to all good charitable institutions.

Statement of Public Hall account from 1st Nov., 1872, to 30th Nov., 1873:—

Dr.	
To subscription from residents.....	\$ 821.00
To amount collected from performances, &c.....	1,351.45
To amount received from Union Church (13 months).....	390.00
To amount received from Asiatic Society.....	35.00
	<hr/>
	\$2,597.45

Cr.	
By rent for one year and one month .....	\$1,300.00
By watchman, oil, matting, papering, and incidental expenses .....	277.27
By Theatre properties purchased from Dramatic Corps .....	415.88
By amount expended in gas fittings, lamps, &c...	401.79
By balance in hands of Treasurer .....	202.51

\$2,597.45

Balance brought down in hands of Treasurer. \$202.51

(E. & O. E.)

We have the honour to remain, your obedient servants,  
(Signed,)

W. H. SMITH,

A. MITCHELL,  
F. TOWNLEY, } Committee.

Yokohama, December 1st, 1873.

#### A PROTEST.

"*Expertus metuit.*"

Of all amazing follies, in these folly-haunted days,  
The worst I have encountered is the wild, preposterous praise  
That sentimental scribblers fling out with lavish hand  
On what they call the beauties of this barbarous, pagan land.

'Tis useless now to specify: you know them well enough,  
The men who fill the magazines with loads of mawkish stuff;  
The priggish "correspondents" who their Ministers assail;  
And even—I regret to say—sometimes the *Japan Mail*.

Excuse the rude connection; I would not be unfair,  
But I have known occasions when the *Mail* has done its share  
To lift the reputation or the Oriental scamp  
To something like equality with men of western stamp.

All such attempts I here denounce as wicked—worse that weak.  
I know this land, have lived here long, with understanding  
speak.

I came here in the earliest times, have stayed here until this  
day;

Twelve years' experience attest the truth of all I say.

I don't deny there was a time when colonists could find  
A practical attraction that might captivate the mind.  
I mean those profitable days when confidence prevailed,  
And opportunities of brilliant traffic never failed.

I grant that, at that period, the Japanese we saw  
Were simple, kind, affectionate and truthful to the core;  
'Tis true we laughed at them sometimes, but never to their  
face,

The took our statements—and our goods—with such a facile  
grace.

For one, I liked them vastly; they received us at our word,  
And if we sometimes pressed them hard, complaints were  
never heard;

I'm speaking now of business,—political affairs  
Concerned us only as they touched the value of our wares.

For several years the country was a Paradise of trade,  
It makes my pocket glow, even now, to think of what we made.  
That was the happy period of five hundred clear per cent.  
'Tis vanished now, and well I know the way in which it went.

With the insolent presumption that distinguishes the race,  
Among their importations they contrived to find a place,  
For educative systems of every class and grade,  
Including, which was worst of all, some principles of trade.

Up to that time, I frankly say, we could not well complain;  
But suddenly a spirit rose that checked our course of gain.  
Not wholly, but in such degree as smote our prospects sore;  
We could but make about two-thirds of what we made before.

A base, suspicious temper sprung up in the native mind;  
Our dealings all were scrutinized, and we could seldom find  
A merchant of that blind, unwary, frank, ingenuous sort.  
Who never questioned if we cleared ten times the sum we  
ought.

I cannot keep my patience, as I read each platitude  
About their gentle manners, when the rank ingratitude  
Of that disgraceful epoch arises in my mind,  
And the injuries we underwent of every fiscal kind.

We brought them commerce: that the most malignant will  
admit,  
And yet, forgetful of this boon, they speedily thought fit  
To use the methods and the arts we rightly deem our own.  
And wrest from us results that should belong to us alone.

Politeness and fine courtesy!—I'm weary of those cries;  
Such qualities are useless in straightforward business eyes,  
I'd rather deal with scoundrels from whom profit can be  
gained  
Than with highly finished gentlemen in worldly wisdom  
trained.

The fact is, that these pleasant ways are nothing but a snare  
You think they mean simplicity and ignorance—but beware!  
Beneath the polished surface lies a craft so deep and deft  
It oft leaves you of your shrewdest senses quite bereft.

A case in point.—Some months ago I laid a dext'rous plan  
By which I hoped to gather in enough to suit a man  
Of many disappointments, who with one successful move  
His keen sagacity and speculative grasp might prove.

I took a partner—native born—for that's the only way  
To circumvent suspicion in this jealous, watchful day;  
We fixed upon a "corner" and,—I blush to say it now,  
He managed all the details, and advanced, I scarce know how.

The course was clear, the figures plain, one thousand fair per  
cent  
Was in the scheme, if all moved on exactly as we meant.  
I smiled,—why, should I not?—for I had laid a private plot  
Whereby I hoped to seize nine-tenths of all my partner got.

The native market quivered; all faces looked forlorn;  
For a moment all security and confidence were gone.  
I smiled a secret smile, and my hopes rose mountably high,  
And the agony of hundreds was but rapture to my eye.

I hasten to the sequel, and here words wholly fail,  
'Twould be self-immolation to magnify the tale.  
In fewest words I hastily unveil my misery;  
I meant to "corner" partner,—and partner "cornered" me.

He gained the whole. I lost my all. I met the soulless  
wretch,  
And proved at least in words my wealth remained; and on a  
stretch.

I hurled anathemas six hours; I could not give him blows  
The Consuls now forbid that course,—though why, Heaven  
only knows.

What made it worse, the scoundrel sought to save himself  
from blame  
By proving that whatever extra profits to him came  
He did not keep, but gave to aid the struggling, yearning  
youth,  
Who seek—I quote his words—the wealth of scientific truth.

As crowning insult he drew forth and opened with a smile  
A "Shilling Shakespeare" I'd for fifteen dollars sold erewhile;  
And pointed to a passage which before I had not known;  
Some stupid speech of Shylock, which he wished to make his  
own.

"The villainy you teach me"—I will not repeat the rest;  
He read it, not alone, but with disgusting verbiage dressed.  
I left the wily trickster with reproaches just and fair,  
He offered no rejoinder save a mute, malicious stare.

And now I quit, a stricken man, this Sodom of to-day,  
The land I sought to brighten with trade's benignant ray.  
I leave my ban, my wrath, my scorn; I leave my hate, my  
curse,  
And only wish that I possessed wherewith to leave it worse.

P.S. This very hour my whilom partner to me came,  
With tear in eye, and head bowed down, I think in conscious  
shame.  
He offered me a farewell gift, some fifteen hundred yen;  
I took them, and I hate the boor a million times again.

So, of all stupendous follies in these folly-haunted days,  
The worst, I still reiterate, is the preposterous praise  
That sentimental scribblers fling out with lavish hand  
On what they call the beauties of this God-forsaken land.  
Yokohama, 13th December, 1873.

## Correspondence.

### SAGHALIEN.

To the Editor of the "JAPAN WEEKLY MAIL."

Are the Western Powers to stand coolly by, and at Japan's  
extremity, permit Japanese Saghalien to become a fulfilment  
of part of the policy of Peter the Great?

Has America's Treaty with Japan, made in good faith, been  
rendered void by the subsequent purchase by them from Rus-  
sia, of Russian America, for a nominal sum, and, as it was  
whispered at the time, for a consideration, (for the probable  
nature of which see the newspapers of the time,) and has Mr.  
De Long's recall nothing to do with his too warm espousal of  
the Japanese interests in this affair?

Do the Western Powers by their silence mean to endorse  
America's connivance at Russia's unwarrantable occupation of  
the southern part of Japanese Saghalien, and that on the eve  
of new treaties to be entered into with Japan?

Japan has now but too good grounds to turn round and  
say:—"Our principal objection from the very first to enter into  
any treaty with Foreign Powers was because we believed  
they would take our country from us, and now we are con-  
vinced we were right, unless you all combine and protest against  
one of your number, who has no other right than might, to  
unwarrantably occupy our soil. We can't see why you should  
make any difference between us and a country like Switzer-  
land; if Russia were to do to Switzerland as she has done to  
us, all Europe would at once protest."

One good turn deserves another. Japan did us a good turn  
at the Court of China, and a combined and firm request by  
the Western Powers to Russia to withdraw her occupation of  
the Southern part of Japanese Saghalien would not be dis-  
regarded by that Power. This once done would certainly create  
a kindly feeling in the heart of every Japanese, and would  
more than anything tend to facilitate the voluntary and un-  
forced improvement of the present treaties.

JUSTICE.

### FIRE WALLS.

To the Editor of the "JAPAN WEEKLY MAIL."

Yokoham, 13th December, 1873.

SIR,—When the last great fire occurred in Yedo some  
eighteen months since, your columns contained a suggestion  
which the Japanese authorities would have done wisely if they  
had adopted, and the value of which they have had practical  
evidence of in the recent disastrous fire in Yedo. I allude to  
fire walls which are almost universal in towns of any import-  
ance in China, where the cities or towns are divided into sec-  
tions by walls either of mud or brick which are built so as just  
to rise above the eaves of the houses, and in many instances  
the cities are so arranged that these walls form portions of the  
houses or godowns. Where they cross the streets there are  
gateways which, when a fire takes place, can be closed and the  
fire confined to one section.

Now I think this plan, which has the experience of the  
Chinese to recommend itself, is worthy of consideration from  
the Japanese authorities.

I am, Sir,

Your obedient Servant,  
J. P.

**Law & Police.****H. B. M.'s CONSULAR COURT.**

Before RUSSELL ROBERTSON, Esq.

December 9th.

SITBOLT v. SCOTT.

John Scott was this morning accused of having, on the 13th ult., forged the signature of Jas. Watson & Co. to an account collected by him from James & Wilson, and appropriated the same.

The accused pleaded not guilty.

Nicholas Sibolt, sworn, deposed that on the 18th of August last he undertook the management of the affairs of James Watson & Co., with the consent of their creditors. On the same day accused asked him if he wanted a book-keeper. Witness did not want one, but finally agreed to engage him at the rate of \$15 and found, same as he had previously received. He was to keep the books and collect the accounts, which were to be paid to witness. Accused had given the money he had collected on several occasions to Mr. Watson. About the 20th September, he had noticed the accounts were duly entered in the books, but found that accused had always given the money to Watson. He had distinctly told accused not to hand any more collected moneys over to Watson & Co. On the 22nd October, he left witness. About race-time he had told accused, to look to Watson & Co. for his wages, as he had always served them. On the 11th November he had received a letter from him [Letter handed into Court.] but he had not replied to it. Accused had credited himself with \$48.55. This was more than was due to him. He had sent to James & Wilson for the account in question, \$15 50, but was informed that the amount had been already collected. Had gone on Saturday afternoon to ascertain for himself the facts of the case when he was shown the account handed into Court. It was signed "Watson & Co." by Scott himself, he intimating that he was authorized by the firm to do so. Witness affirmed that no such authorization had ever been given him. In fact, since the 22nd October he had never allowed him to sign anything, considering him as out of his engagement.

Witness to accused—Witness had offered to pay accused until the end of October if he stuck to his service. He had never told him that he did not require him any longer. Accused had never asked for any sums prior to his signing the bill in Court. He had been engaged for some two months.

To Court—The entries in the book were in the hand-writing of the accused, commencing about the 26th August last. There was no outstanding account owing to accused which might justify him in collecting the \$15.50 in question.

R. C. Broadhurst, sworn—Witness conducted the business of James & Wilson. He remembered the bill in question being presented by Scott. It was on the 13th November last. Accused had called twice for the amount. It was paid on the second occasion. Sibolt's collector had called for the amount, but had been informed by him that it had been paid.

To accused—Witness could not remember anything being said to him by accused about wages owing to him by Sibolt.

Prosecutor in reply to Court, said that after he had left his employ, accused had not possession of the bill in question. Could not say whether there were other bills out. Could not say whether Watson & Co. had collected any accounts on their own behalf. Watson had said that he had not authorized Scott to collect the account of James and Wilson.

The Court decided to remand the case until this day week, at 10 a.m., for the production of witnesses on both sides. In the meantime, accused would be kept in custody, unless he could find security in his own recognizances in the sum of \$100, and two sureties in \$50 each, or one in the sum of \$100.—*Herald*.

**H. B. M.'s PROVINCIAL COURT.**

Before N. J. HANSEN, Esq., Acting Assistant Judge.

December 10th, 1873.

John Viney and Benjamin Long were charged with assaulting Patrick Toole on December 5th.

P. Toole alleged that Viney struck him in the office of the *Japan Herald*, knocking him down, and that Long then carried him out of the office.

It would seem that Viney had occasion to complain of the manner in which Toole's work was executed, upon which the latter declined to remain in the employ. On coming to the office to receive his wages a warm discussion took place which led to a scuffle in which it is stated the first blow was struck by the prosecutor.

The evidence against Long showed that no unnecessary violence

had been used in removing the prosecutor, and both charges were dismissed; prosecutor to pay costs.

Patrick Toole was then charged with assaulting John Viney. Fined \$5 and costs.

**IN THE UNITED STATES' CONSULATE.**

Before GEO. N. MITCHELL, Esq., Vice-Consul,

W. L. CLARK, Esq., } on the Bench.  
C. R. SIMPSON, Esq., }

Wednesday, Dec. 10th, 1873.

E. BERGER v. A. STRANDBERG.—Claim for \$607.50, being a balance of account for goods supplied.

E. Berger sworn:—In the year 1872 I supplied the defendant with sundry goods, as entered in books (books produced). I have received from defendant \$244 on account, which reduces the total amount due to the sum claimed. I have presented bills for payment frequently through my collector; and spoken to the defendant myself, but could never get any further answer than that she would see about it.

D. Welsh (sworn):—I was employed by Mr. Berger to collect these bills; and since last January, I daresay, I have applied for payment about ten times. Defendant always pleaded poverty. I asked her to pay part or make some arrangements with the plaintiff. She never paid me anything. She never disputed the account.

Plaintiff:—The defendant agreed to pay me \$50 per month, but made only four such payments.

Judgment by default in favour of plaintiff for \$507.50 with interest from January, 1873.—*Gazette*.

**U. S. CONSULAR COURT.**

Before G. N. MITCHELL, Esq., Vice-Consul.

DEC. 11, 1873.

COOK against T. S. STEVENS &amp; C. NYS.

This was a claim for a sum of \$1,354 principal and interest, the balance of payment due for a vessel sold to defendants some months since.

As the principal sum had been paid into Court by the defendants the only question was as to costs. The parties to the suit were recommended by the Consul to arrange this matter in a friendly manner, and it was subsequently agreed that each side should pay half of the costs incurred.

**Extracts.****THE FUNCTIONS OF THE BRAIN.**

(Mail.)

The paper by Professor Ferrier, read before the British Association on Saturday, points towards the realization of a hope which men of science have long cherished, and which many with no pretence to science have shared. Almost from the time when it was established that the brain, as a whole, is the organ of feeling, of thought, and of voluntary motion, it became manifestly probable that each of these functions has its especial seat in the nervous tissue, and that their partial operations might also be localized in a similar manner. On this question, however, the researches of anatomists were almost wholly fruitless. They showed that the brain consisted of two kinds of material—a gray substance, which was found spread over the surface of the hemispheres, and collected here and there into masses in the interior, and a white substance, fibrous in its character, which lined the gray matter of the hemispheres, and surrounded the masses within. A variety of evidence, partly experimental, partly derived from the actions of the lower animals, and partly from the observation of disease, proved that only the gray matter originated action, and that the function of the white fibres was to establish communication between different parts of the whole. Between nervous action and electricity there is a resemblance nearly approaching to identity, and the gray matter was early compared to a galvanic battery and the white to the conductors proceeding from it. In the lower animals, as they rose in the scale of intelligence, the brain was found to become larger relatively to the bulk of the body, and also more complicated in structure; and an increased amount of superficial gray matter was gained by the surface being intersected by deep grooves, which marked out convolutions of corresponding prominence. In man the whole bulk of the brain, the complexity of its several parts, and the size and definite character of the convolutions reached their highest point; and in all these particulars, as a general rule, cultivated races and gifted individuals were believed to surpass savage

racés and the ordinary mass of mankind. At this point, however, inquiry was arrested; and a German anatomist, who devoted thirty years of his life to the dissection of human brains, in the hope of throwing some light upon the functions of their several parts, committed suicide in his laboratory in despair at the fruitlessness of his researches. Dr. Gall in this country, and Spurzheim in Germany, attempted to find the solution of the problem in another way, by tracing out some relation between the shape and development of the brain, as exhibited by the shape and development of the head, and the varieties of individual capacity and character. They started with the assumption that clever men have not only fully-developed heads, but also fully-developed foreheads; and they placed the "intellectual qualities" in the front portion, the "moral qualities" in the middle portion, and the "animal propensities" towards the back of the head. Having thus laid the foundation of the mock-science of Phrenology, they proceeded to map out the three districts into departments, and to allot to each department some peculiarity of character. They caught people who were gifted in some special direction, and fancied that they could find big places in corresponding parts of their heads. Proceeding further, they caught people of whom they knew nothing, and, discovering big places in their heads, assumed that these afforded evidence of actual or latent capacities.

The notion thus expressed became extremely popular, and was widely diffused by the writings of the brothers George and Andrew Combe, who were earnest believers in Phrenology, and who embodied an account of its principles in more than one of their works. Professors of the new art were to be found in most large centres of population; and people who were otherwise rational went in numbers, and paid money, to have their heads examined and their characters traced out. The Professors were soon engaged in strife as to the precise value of a prominence in this or that region, and were forced to adopt the convenient hypothesis that "bumps," however big, might be counterbalanced and rendered of no effect by bigger ones of opposite tendency elsewhere. Their sketches of character were of the same vague kind as those which have been founded on peculiarities of handwriting, or, at best, were such as any tolerably acute observer might gather from the necessary interview with the subject to be examined. It was rare, indeed, for two Professors to be at all in accord in their opinions about the same cranium; and Spurzheim himself was deceived by a story of twin sisters almost identical in appearance, but, as he was told, of widely different character. The same young lady personated the twins, and the great man, fell into the trap thus laid for him, and gave two different accounts of her "developments" on two successive days. Phrenology early attracted the notice of the Edinburgh Reviewers, and was made the subject of two articles by Lord Jeffrey, the latter of which, published in 1826, for the time extinguished its pretensions. He not only showed that the supposed "faculties" of the Phrenologists had no separate existence, and were states of mind of a highly complex character, but also that, on the phrenological hypothesis, they were not numerous enough for the requirements of life. He argued that if we could not love our children without an organ of Philoprogenitiveness, we should require an organ of Philoprogenitiveness in order to love our parents, and a Philadelphic faculty to attach us to our brethren and sisters. Nay, more; he suggested that a person who had been cured of restlessness by laudanum would be unable to attain to a proper appreciation of the value of the drug unless, in addition to memory and common sense, he was endowed with an organ of Philandyneness, which might be situated on the nape of the neck, between maternal love and vanity! After this Phrenology languished, and was chiefly kept in remembrance by plaster casts on which the "organs" were mapped out and duly labelled, and which formed part of the stock in trade of itinerant image-sellers. Twenty-five or Thirty years ago, however, it attracted renewed attention, and was taken up by that large class of people who feel a lively interest in what they conceive to be science, but whose minds have never undergone the training necessary to enable them to understand the nature of proof, or to estimate the value of evidence. The revival received its *coup de grâce* at the hands of Dr. Carpenter, who showed, in an elaborate essay—first, that the configuration of the outside of the skull bore no necessary relation to that of the brain; secondly, that in ascending the animal scale the first appearance of the hemispheres of the brain was as a rudiment of the anterior lobes, that the middle and posterior lobes were gradually superadded, and that the latter attained their full development only in man; so that the hypothesis that the anterior lobes were the seats of the intelligence and the posterior lobes of the animal propensities was one

which could not be sustained; thirdly, that the Phrenologists, in their professedly complete system, left out of account more than half of the gray matter—that of the base of the brain. Dr. Carpenter then put forward his own view, which was that the masses of gray matter towards the base of the brain were the centres of sensation and motion, that the hemispheres were the organs of thought, and that in this capacity they did not act in isolated portions, but as a whole. This view was maintained by many ingenious arguments, and for a long time it commanded the general assent of physiologists.

Of late years, however, much attention has been directed to the parts which have been found diseased after death in persons who have exhibited definite symptoms during life; and, in this way, evidence of the localization of function in different portions of the hemispheres has gradually been accumulated. M. Broca announced that, in a disorder called aphasia, or loss of the memory and power of utterance of words, a certain convolution of the left side was frequently affected; and Dr. Hughlings Jackson has been able on several occasions to predict from symptoms the precise situation of morbid action. In many instances, however, the ordinary relation has been wanting, and endeavours to extend the evidence by experiment were for a long time without result, probably in both cases because a local injury had produced extensive and general disturbance. Recently, however, Professor Ferrier, following up a clue afforded by some imperfect experiments of the German physiologists, Fritsch and Hitzig, has succeeded in localizing the action of a stimulus in certain parts of the brain, and has obtained the results of which we published a summary on Monday. His method of proceeding has been to place an animal under chloroform, to remove a portion of the skull and of the dura mater, or dense membrane beneath it, and then to apply two electric conductors to the brain itself, or rather to the membranes which immediately cover it. In these experiments the Faradic or induced electric current has been employed, and it is found that if the current exceeds a certain strength general excitement or disturbance is produced. When, however, the current is very feeble, so that it may be presumed to flow only along the most direct path from conductor to conductor, and to influence only the portion of brain lying between them, it is found that the results are constant and definite, and that stimulation of the same part of the surface of a hemisphere produces always the same movement, not only in the same animal, but in all animals. Thus, when the conductors include one portion of brain a front limb is moved in some determinate direction; when they include another a hind limb is moved instead; and a great variety of actions may thus be called forth with absolute certainty, and the limbs of the unconscious animal may be played upon, so to speak, at the will of the operator. It seems that some light has already been thrown by these inquiries upon the conditions which produce epileptic and other convulsions; and, as far as can at present be determined, it is probable that Dr. Carpenter's view of the functions of the hemispheres will have to be modified or abandoned. As yet, however, it would be premature to form any definite conclusions, except that Dr. Ferrier has given to science a method of research which cannot fail to be of incalculable value, and which marks an era in the progress of Physiology. It is almost sure that at no distant time this method will add enormously to our knowledge of the diseases of the nervous system, at once the most obscure and the most afflicting of the ills which flesh is heir to, and those which have hitherto most defied the art of the physician. It is curious to observe in the history of science how one discovery paves the way for others which seem at first sight to be unconnected with it. The value of Dr. Ferrier's researches depends wholly upon the movements produced being studied in their simplicity—undisturbed by any which might result from voluntary struggling. It is only by the use of chloroform that this condition can be fulfilled; and hence the agent which for us has disarmed pain of its terrors has also enabled us to use the lower animals for the extension of knowledge, and for the alleviation of human suffering, in a manner which, without such aid, would have been altogether impossible.

**A CURIOUS DISCOVERY.**—It is reported that in the State of Ohio a strange discovery has just been made. An old tree having been broken to pieces by lightning, the fragments of a skeleton and a portion of a portfolio were found among the debris. The portfolio contained an almost illegible document, which showed the remains were those of Captain Roger Vanderberg, a companion of Washington, who, on a march against the Indians, was wounded and taken on the 3rd of November, 1761. Having succeeded in escaping, he took refuge in a hollow tree, but, unfortunately, could not get out again. He passed the last hours of his life in writing his journal, from which it appears he must have lived eleven days in his terrible imprisonment.

CAMP, Yokohama, 12th December, 1873.

C. S. F. FAGAN,—Lieut.,  
 R. M. L. I.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, DECEMBER 13TH, 1873,

THE Mail departures in the course of the present week are the P. M. S. S. Co.'s *China*, for San Francisco, on the 8th instant, and the M. M. steamer *Volga*, for Hongkong, on the 9th instant.

No Mail has arrived in the course of the week.

The *Costa Rica* brings \$3,600 treasure from Shanghai and ports,

The *Volga* took hence 592 bales of silk.

**Cotton Fabrics.**—The calamitous fire which occurred at Yedo has had the effect of suspending business to a very large extent, and we can only report a feeble demand during the week which now closes. *Shirtings*, however, have been dealt in to a moderate extent, and, comprising some parcels which were sold to arrive, reach 17,750 pieces at prices which are in most cases satisfactory. A considerable sale of *Black Velvets* at lower rates is reported, but in other classes of cotton goods the market is without animation and heavy.

**Yarns.**—Moderate sales have been made, and a total of 455 bales is reported.

**Woollen Materials.**—We are unable to record any improvement in this market which continues heavy. The largest dealers report an absence of demand.

**Iron and Metals.**—Stocks are unchanged and prices have undergone a slight decline. The settlements are reported at 25 tons, and we also hear of the sale of 100 tons 1/16 to 1/8 *Nailrod*, to arrive, at \$5.47½ per picul.

**Sugar.**—Our market shows no activity and prices may be reported as weaker,

**Rice.**—May be quoted at \$2.35 but there is no stock,

less activity.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**Silk.**—The telegraphic advices received from the English and Continental markets are conflicting to a degree which, for the present, it is most difficult to account for. Business, however, continues very active, and we have to leave our last quotations unaltered. Common and inferior hanks show some signs of weakness indeed, but the fine grades of the both Hanks and Oshiu command full prices.

Arrivals since the 5th instant are 350 bales and purchases 700 piculs, the greater part of which is as yet unsettled.

**Silk-worms' Eggs.**—We have to postpone our final report to our next issue.

**Tea.**—Telegraphic intelligence from the United States has greatly influenced our Tea market, and for the closing week settlements barely reach piculs 800.

Supplies still continue on a moderate scale and the guild system of only "feeding" this market evidently still prevails; this policy will probably prove dangerous this season as recent advices from New York hold out little or no inducements for late shipments. Our prices close very weak.

### KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

### KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all Chemists.

CAUTION.—The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

THOMAS KEATING, London  
EXPORT CHEMIST AND DRUGGIST.

Indents for pure Drugs and Chemicals carefully executed.

Yokohama, August 9, 1873.

## MISCELLANEOUS.

### THE GREATEST WONDER OF MODERN TIMES! HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

### THE GREAT CURE ALL! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kind. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

### THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

It prevents hair from falling off or turning grey, strengthens weak  
hair, cleanses it from scurf and dandriff, making it beautifully soft,  
pliable and glossy. Great caution is necessary to ask for ROW-  
LANDS' MACASSAR OIL, and avoid all others, this being the only  
genuine. Price 3s. 6d., 7s., 10s. 6d., equal to 4 small, and 21s. per  
bottle. CAUTION—Each bottle has a glass stopper instead of the  
cork as formerly. All with the cork are spurious imitations.  
ROWLANDS' ODONTO, or Pearl Dentifrice, preserves and  
beautifies the Teeth, strengthens the Gums, and gives a pleasing  
fragrance to the Breath. It eradicates Tartar from the Teeth,  
removes spots of incipient decay, and polishes and preserves the  
enamel, to which it imparts a PEARL-LIKE WHITENESS. Price  
2s. 6d. per box. ROWLANDS' KALYDOR realises a Healthy  
Purity of Complexion and a Softness and Delicacy of Skin.  
Soothing, cooling, and purifying, it eradicates all Cutaneous  
Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle.  
ROWLANDS' ESSENCE OF TYRE never fails to produce  
immediately perfect change in Red or Grey Hair, Whiskers  
Eyebrows, &c., to a beautiful glossy and permanent Brown or  
Black, which colour remains so durable that neither washing or  
perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per  
bottle. Sold by all Chemists, Perfumers, and Bazaars throughout  
China and Japan. "Ask for ROWLANDS' ARTICLES," A ROWLAND  
& SONS, 20, Hatton Garden, London.

VOL. IV.—No. 51] YOKOHAMA, SATURDAY, DECEMBER 20, 1873. [PRICE \$24 PER ANNUM.

## Notes of the Week.

H. I. M. THE MIKADO and the Empress visited Yokosuka on Wednesday afternoon, about half past one P.M., and were received at their landing by the Diplomatic Corps, M. Verney, the officials of the Arsenal and the Captain of the Russian gun-boat *Sobol*. His Majesty thanked the Diplomatic Corps for their presence and was answered by Sir Harry Parkes. About two o'clock His Majesty accompanied by the Empress commenced the inspection of the works, these and the whole town being decorated with evergreens, and after sunset illuminated. Their Majesties were everywhere received with demonstrations of loyalty. On Thursday about noon their Majesties landed again in Yokohama in presence of a great number of foreigners and natives, and at two o'clock they left for Yedo.

MR. HATAKAYAMA, an official of the fifth rank in the Mom Bu Sho, and late First English Interpreter and Secretary of the Embassy, has been appointed Chief Director of the Imperial College in Tokei (Kai Sei Gakko). Mr. Hatakayama left Japan over eight years ago, and proceeded to England, where he spent nearly three years, studying the English language. He then went to America, and was so far advanced as to be able to enter the Scientific School at New Brunswick, New Jersey. After one year spent in this institution, devoting his time chiefly to the study of physical science and mathematics, he then passed a year in preparation for the classical course in Rutgers College, where he remained until the end of the Sophomore year. He then started for Japan, but when in Paris, received a telegram ordering him to return, and join the Embassy. He continued with Iwakura and Okubo, principally, until the arrival of the Embassy in October of this year, being always one of the busiest members of that body. He has had the rare opportunity of seeing the world, after a very fair preparation of seven years study in England and America. On his arrival in October of this year he had been abroad eight years and three months. His commission makes him Chief Director of the Imperial College (Kai Sei Gakko) and Superintendent of the School of Foreign Languages (Guai Koku Go Gakko.) Mr. Hatakayama is best known to foreigners by his name when abroad, of Sugiura Kozo. Mr. Ban remains Vice-Director.

As we have always given the people of the United States credit for the manner in which they showed themselves willing to deal with the Shimonoseki Indemnity, on such knowledge of the subject as they possessed, we claim the privilege of clearing the question from any false lights which may intentionally or unintentionally be thrown upon it from this direction.

In the first place, then, England, who really bore the lion's share of the expense, waived all claim to the lion's share of the Indemnity. America, on the other hand, who, by the Report of its own Committee on Foreign Affairs only spent a "few thousands of dollars" in the operations, and was only represented by a chartered steamer with one gun, claimed as large a share as England who had eight men-of-war in action. France and Holland proposed that the Indemnity should be divided *pro rata* according to the expenses incurred. But the American Government pleaded that the presence of its flag aided as much to bring about the results as the guns of the other three Powers. Whatever the three Powers may have thought of the plea, they declined to dispute the claim, and

agreed that all should share alike, England waiving the point in a despatch from Lord Clarendon indicative alike of the character of the nation and the mind of the Minister. He said: "The American principle of partition will secure to France a larger share of the indemnity than she would obtain under the principle of distribution suggested by M. Drouyn de Lhuys, while Holland and the United States would be benefited by it in a still greater degree. England alone would be required to make a sacrifice; but Her Majesty's Government will consent to do so, if only to mark their conviction of the community of interest which the four Powers have in Japan, and as an evidence of their hope and desire that that community of interest will be the principle by which the conduct of all of them will invariably be regulated in that distant and peculiar country." Now, the claim for damage done to American property for which compensation was demanded was \$32,000, exclusive of \$10,000 for injury done to the steamer *Pembroke*, while, as has been stated, the expense incurred by America in helping to enforce this claim was "a few thousand dollars"—let us say ten, it was most probably five. We will, however, call the whole sum \$52,000.

The first charges on the first instalment of \$500,000 paid by Japan were for the actual injuries done to property, so that America immediately received the \$42,000 due to her on this account. After this, all was profit, and, what with interest and successful investment, the money held by the American Government now amounts to \$705,000 in registered bonds, on which the Secretary of State says "he is not aware that any claim exists."

The Committee on Foreign Affairs, in their Report dated May 1872, recommend that the payment of the *unpaid instalments* of the Indemnity fund be remitted. Now, we certainly are not going to allow this recommendation to pass under the garb of magnanimity. If America wishes to do a just thing she will pay back to Japan that sum of \$705,000 in registered bonds, for her claim has been from the first, as her own Secretary of State observed, without an equivalent. As to her equitable right to a fourth share of the money now due, or even to control its disposal, she has none, and the relinquishing of her claim is a mere question of bare honesty—a very rudimentary, however much neglected, form of duty.

WHEN Pistol rushes into Shallow's garden to announce the death of the old King and says he has "tidings" and "happy news of price," instead of delivering which he runs off into a rigmarole and his usual nonsense, Falstaff says to him "I pr'y thee now deliver them like a man of this world." The *Gazette* seems just now to require some exhortation of the same kind. On Monday evening it appeared with an article which reminds one of a melo-dramatic scene in which conspirators are seen filling bomb-shells with gunpowder, boring cannon, trying small-arms and learning the goose-step. "A movement is on foot."—"We have letters lying before us which we dare not quote."—"It behoves the Government to be very watchful."—"Illegal drilling must be nipped in the bud" and something else "is to be crushed in the bud." (One is irresistibly reminded of Sir Boyle Roche's "I smell a rat; I see him hovering in the air; but, with the blessing of God, I will nip him in the bud.") The paper has never really sobered down since it got hold of the Korean story and we acknowledged that there was some correctness in the outline of the information it gave to the public on the question:—the details we entirely dispute to this day, especially the authenti-

city of the letters said to have been addressed by Corea to Japan. Since that time we have been constantly liable to dark hints about mysterious proceedings. There is always a Guy Fawkes in the back-ground with tender-box and matches, a black mantle and alouched hat. The paper speaks in whispers—"We could 'an if we would. There be those that know," etc., etc.

Now all this seems to us very absurd, and, if we must say it, childish—wholly unworthy of a manly appearance before the world, and suggestive of connection with low forms of the dramatic art. It is not for newspapers to be playing hide-and-seek in this manner. There is something wrong somewhere. If the *Gazette* lives in Olympus and dines with the gods it should not violate the secrets of the mahogany, because this brings disrepute on men who have a proper horror of the character of an "interviewer," and no more think of their host's conversation as the subject matter for criticism or publicity, than a clergyman would illustrate his Sunday's text from the same source. If, on the other hand, there are deities who allow things to ooze out which ought to be kept secret, they cannot be too greatly blamed for their indiscretion. While there are matters which it is open to members of a government or officials openly to talk of and criticize, every government has its secrets and its servants should keep them inviolate. But whether they do so or not, the habit of alluding to them in public in an obscure and mysterious manner is highly objectionable and deserves grave censure. If a letter has been received containing such and such information the publication of which is prohibited by the wish of the writer, dark allusions to its contents are in the worst possible taste, and should warn writers against those whom they entrust with their secrets. To the public such proceedings are simply insufferable.

THE following ominous paragraph appears in the *Japan Gazette* of Wednesday evening last.

'We hear that two Court Milliners from Swan and Edgar's, London, are coming out for Japan to make European millinery, dresses, &c. for the Empress, the Princesses,' &c.

We should consider it in a high degree indecorous to comment upon this paragraph otherwise than seriously. The illustrious Lady to whom reference is made in it demands and deserves from every foreigner in this Empire the respect due to her exalted rank and to her personal character. But we would earnestly beg her advisers to reflect how far a step of this kind, to which real importance attaches, is wise. Every great family of the human race has its peculiar and characteristic dress, which use has fashioned to its necessities, and history has identified with its name in such a manner that it has grown to be at once becoming and interesting. The dress of the Japanese is eminently so, and we regret to see it disappearing so fast among the men of the upper classes. It is far more picturesque than our own, it suits the physical aspect of the race extremely well, and it conceals defects in the limbs of adults which are very common and which have arisen from the habit of sitting cross-legged from childhood. A Japanese gentleman moves in it with grace and dignity, and derives from it an air of good-breeding and self-respect. The dress of the women is equally picturesque, and equally adapted to their stature, figures, and carriage. The men appear at a disadvantage in European dress, which, however, is so convenient, so suited to an active habit of body, so simple and unpretending, that we hardly wonder they have adopted it, the more so that this must have been done in many cases by those who have been abroad and were anxious to avoid the observation their own national dress would have drawn upon them. But as regards the women the case is wholly otherwise, and we venture to think that, whatever their personal graces, they will suffer gravely by adopting the dress of European women. It neither suits their figures, stature nor carriage. It is liable to great and rapid changes of fashion. It demands costly accessories wholly unsuited to the character of this people. The adoption of it by the Court would throw the Imperial and noble ladies who constitute that circle out of harmony, in external appearance at least, with those who represent the upper classes of society, and though the latter would soon be compelled to admit the omnipotence of the example set them, the

change so introduced would be costly, unbecoming and denationalizing.

Time was when the difference of costume, manner and carriage between the European and the Japanese was marked, and was calculated to produce respect on both sides. Each approached the other with the feeling that he represented a different and rival order of ideas in which he had confidence and which gave him repose and *aplomb*. The very distance in approach and difference in dress and manner were sources of strength and a claim to mutual respect. Many of the Japanese have abandoned this advantage, and it is impossible to say that they have gained on the whole by the change. Few of them are sufficiently familiar with our dress to adapt it, and the necessary charges of it, to time, place and circumstance, and lamentable incongruities often result from this want of familiarity. But if this is the case with the men, it will assuredly be much worse with the women. It is not desirable that foreigners should find cause for laughter and ridicule in the changes the Japanese are making in their dress, customs and manners. We would have the movement of the nation associated with nothing but respect, and earnestly deprecate any changes by those whose example is sure to be followed, calculated to diminish this. It must also not be forgotten that the encouragement of native industries, in which in all countries women are greatly employed, is peculiarly the province of the first Lady in the realm, and that if European fashions are adopted these industries will suffer seriously. We know that this plea may be pushed too far, and we have no wish to use it beyond the fair lengths permitted by a reasonable political economy. But it is an argument not without force, and certainly must be allowed its proper effect and weight in considering this subject.

THE following is taken from the *Arakan News*, a paper published at Akyab, and is at once curious and interesting as evidence of a movement in India towards the adoption of the European gamut:—

"*Music's Appeal to India.*" By Laki Nath Ghose. This is an allegorical appeal to the nation on behalf of the study of music, of which the Baboo is an ardent admirer. He rejoices in the attempts to found a School of Music, as he believes it to be an ennobling pursuit, and calculated to elevate and refine the tastes of his countrymen. In the person of the Goddess of Music he gives some historical information as to the art as practised and encouraged, or otherwise, in past times. He traces briefly the course of music of various schools in different countries. Finally, it appears that the goddess has come home, and the author wishes his countrymen to receive her with gladness, to encourage and support her. The allegorical style is well suited to the people of this country to whom the work is addressed, and may be more telling and acceptable in that form than the more matter of fact dissertations of Western writers. The author's object is one that should commend itself to all, for he desires not only to encourage music as a study, but to associate with the music words that shall raise and refine the people even from childhood. He recognises the value of instilling instruction in the minds of youth while impressionable, and illustrates his contention by a reference to the singing of the charity children in St. Paul's Cathedral, when they sing our grand Old Hundredth—

All people that on earth do well,  
Sing to the Lord with cheerful voice.

We cannot but commend what is evidently, with the Baboo, a labour of love; and wish him and his coadjutors every success in their object, which is one tending in a right direction, and should lead to good results. We may add that the pamphlet is printed for gratuitous distribution to encourage music."

Much as we should deprecate in the rising generation of women in Japan an ambition which would probably stop short at that rudimentary kind of musical performance which is a terror alike to gods and men, we hope that our gamut will one of these days drive out the excruciating scale of the Chinese, which is chiefly (though not exclusively) employed in the music of this country. The best weapon with which this scale can be fought is the harmonium or melodian—the latter as made by the Americans is singularly effective—and as soon as the European gamut has expelled the old demon of the Chinese scale, the ear has been prepared for the entrance of the common chord and the varieties of harmony springing from and related to it. At present, our music must be as unintelligible to the Japanese as our language, and possibly it may be as disagreeable to them as their music is to us. But music is quite a modern art; the ancients knew nothing of it; and all the music of the Jews, the Greeks and Romans was hideous and discordant noise. The agonies of a worse world cannot express themselves in more excruciating progressions than the ecstasies of Chinese and Japanese flute players, and one of the difficul-

ties connected with investigations into this art in these countries is the torture they involve. The *Koto*, *Samisen* and other kindred instruments can be borne with, in moderate doses, and with restoratives carefully administered at short intervals. But the flute music operates as a virulent poison and readily occasions convulsions, unless exhibited in small quantities, with extreme care, and at long intervals.

THE Oriental Bank has announced that it is prepared to keep current accounts and receive fixed deposits in gold and silver *yen*, amounts received in *yen* being payable in *yen*.

The announcement should be gratifying to the Government inasmuch as it indicates the reception of the Japanese *yen* into the family of coins; but it also imposes responsibilities which are too obvious to need further reference.

THE following edict was published on Monday, and the censure it has created is beyond description. The unlucky owner of fifty rabbits is said to have drowned himself and the animals near Asakusa because he was unable to pay the tax. Many have been sent into the country, and the price has fallen to one or two *tempos*. But the persons who ought to be taxed are the dealers, not the people who keep a few rabbits for their amusement. This is terribly arbitrary legislation, though we are not displeased to see a check put upon an expensive folly for which the farmers will, one of these days, pay dearly.

#### TO THE HEADMEN OF THE DIVISIONS IN THE CITY AND SUBURBS.

In spite of frequent warnings given since the spring of the present year with respect to the trade in rabbits, it still continues. The tax mentioned below having now been imposed, you will ascertain the names of all possessors of rabbits within your respective districts, collect the money and pay it in by the 25th instant.

Persons who sell or purchase rabbits shall report the diminution or increase of their stocks to the district office.

Complete lists of the names shall be kept at the district offices, and the tax be levied each month.

A tax of one *yen* (dollar) shall be paid monthly for each rabbit.

Persons who possess rabbits without reporting the same shall be fined two *yen* for each rabbit so possessed.

The assemblage of numbers of persons for rabbit auctions is prohibited as heretofore.

December.

ON Wednesday afternoon the return match at Foot-ball between the "Services" and the "Settlement" was played on the Cricket Ground.

The game commenced at a quarter before four o'clock, an improvement as regards time on the other matches. Until half time was called, when ends were changed, the Settlement managed to keep the ball in a very dangerous proximity to the Services goal, but when they had the wind in their favour they were enabled, after some near escapes, to score a goal by a well directed kick by Mr. Lagden. After this the Services played well and together. The way they worked the *scrimmages* showed they intended business, and they in their turn aided by the wind kept the ball down close to the Settlement goal, and were rewarded by Lieut. Sandwith getting a goal by an uncommonly good kick. Though ends were again changed, and we noticed that as time drew near to five o'clock the Services played better and stronger, we are unable to record anything else but a drawn game when the bell at Noge Hill struck the hour. The strong wind that was blowing from the N. E. spoilt a good match and took away the pleasure from the on-lookers who appeared to wish that they might warm themselves by joining in. Strangely enough this makes the fourth drawn game of the season.

As we have already so often mentioned the names of the principal players in previous matches we will not do so again, but give the respective teams as they played.

The Services:—Consular Service; Messrs. Longford and Gubbins. Royal Marines; Capt. Hill, Dr. Putsey, Lieuts. Hungerford, Drury, Sandwith, Smyth, Serpts. Rose, Batchelor, Gardner, Ptes. Culley, Fulham, Coombes, and Pocock.

Settlement.—Messrs. Abell, Abbott, Barlow, Bennett, Burns, Brent, Dare, Davidson, Elder, Hamilton, Melhuish, Lagden, Snow, Whittall, and Greaves.

AMONG the entertainments which people make or which are made for them during Christmas week, we observe a promised reading by Mr. Geo. Pauncefort of selections from Dickens' works. It is long since anything so agreeable has been promised to the Public of Yokohama, and the accounts in the China papers of Mr. Pauncefort's performances are so satisfactory that we trust he will find ample reward for his rather adventurous journey to Japan in the reception which may be accorded him on Tuesday Evening.

WE are glad to observe that a meeting of the Athletic Club has been called to see what steps can and should be taken for the formation of a Skating Rink.

THE *Mail*, in a valedictory article on the close of Mr. WATSON's brief career in Japan, omitted all reference to the two circumstances of which Mr. WATSON may pardonably feel some pride for taking effective action in, viz., in securing the liberation of the imprisoned and banished native Christians, and thus paving the way for the establishment of religious toleration in Japan, and in procuring the abolition of prostitution contracts, the recognition and enforcement of which have been a disgrace to the Government. In conjunction with Count TURENNE, French Chargé d'Affairs, Mr. WATSON brought under the notice of the Government some of the strictures of the press, and pointed out how injuriously a persistence in persecution lowered the character of the Government abroad. Thousands of unfortunates sold into a life of degradation, who were set free from the slavery of licensed brothels, have reason to bless the name of their benefactor (did they but know it). These reforms, alike creditable to the head and to the heart of Mr. WATSON, will cause his philanthropic efforts to be remembered with gratitude and respect, and the fruits of which not alone this generation will reap. He has left a mark behind him that time will not obliterate.—*Japan Herald*.

At the auction on Wednesday of the landed property belonging to Messrs. Textor & Co. recently declared insolvent, the following purchases were made:—

Lot No. 29...	\$22,000	Messrs. Ahrens, Esq.
" " 46...	\$ 5,900	R. B. Baker, Esq.
" " 158...	\$ 5,200	} Captain Lane.
" " 159...	\$ 1,700

HONEYDEW.—The dispute as to the cause of honey is again coming to the front, but a correspondent of the *Gardener's Chronicle* throws some light upon it by putting the remarks of the Abbé Boissier de Sauvages in a memoir read before the Montpellier Society of Sciences nearly a hundred years ago. The Abbé asserted that there were two kinds of honeydew, one found on leaves when there is not a suspicion of an aphid; the other the excrement of these well known insects; the latter he describes as the "most delicate honey known in nature." So many persons have testified to finding honeydew when aphides were not to be seen, that it could no longer be doubted that the little "fly" was not the only source of the sweet little globules known as honeydew. The statement of the Abbé is worth notice, and satisfactorily clears the many persons above mentioned from the charge of being inattentive or inaccurate observers.

## EDUCATION IN JAPAN.

## IV.

## NATIVE TEACHERS.

THE study of foreign languages and science, though extremely important, constitutes but a part of education in Japan. A scheme of national instruction for this country must necessarily include more that refers to the education of the people in their own, than in a foreign tongue. Only a small portion of the rising generation will obtain a knowledge of foreign languages and science, and a still smaller number will be brought under the direct instruction of foreign teachers. The rest, who constitute a vast majority, will, it is hoped, receive the best sort of education which an improved system of schools and instructors can furnish them. To the creation of an improved system of public instruction in the vernacular, and the training of a corps of qualified teachers, the best energies of the Education Department are pledged, and will doubtless be given.

At present the demand for intelligent young men able to speak a foreign language, trained to western methods, and instructed in western learning, is far greater than the supply. In a few years this will cease to be the case. Whereas, of natives well-educated in their own language, there is not the slightest danger of there ever being too many. Hence the great importance of that department of the work of the ~~Education Department~~, which relates to the supply of native teachers.

The new education in Japan will be radically different from the old; hence the necessity for a new type of native teachers. The Japanese schools of the future will be organized on western principles and after western models, and foreign science and methods of instruction are to be introduced. In these schools the old typical Japanese teacher will be an anachronism.

The need of properly qualified native instructors is one of the greatest, if not the greatest of the many needs of Japan. The sudden, almost violent revolution in educational as well as political ideas through which this country has passed, has discovered that sore need. It is quite safe to say that hitherto the western idea of a trained teacher and of a science of teaching has been unknown to the natives of this country.

That this is true seems to be abundantly proved by their persistence in employing men in their schools who were unfit to be teachers, and also by their treatment of the professional teachers whom they brought from other countries. Further, their ideas of what an education ought to be were as different from the ideas now expressed in the school systems of foreign nations, as those of the medieval schoolmen differed from those of Herbert Spencer.

So long as the old education of Japan consisted merely in obtaining what we consider the mere work-tools, and so long as they made an end of what we count the means, it could not be expected that instructors such as are now needed should appear. Every foreigner who has attempted the study of the Japanese language knows by experience that teachers such as are numbered by thousands at home cannot, or rather could not, be found in Japan. However learned the native might be, however diligent and earnest his pupil, it was not possible to make a teacher and to master a language at the same time. The native, knowing nothing of his own language by critical or analytical study, and the idea that a language could be mastered in any other way than by slavish repetition being entirely new to him, was unable to impart to a foreigner what was perfectly familiar to himself. The helpless learner by dint of much direct and cross-questioning,

and at much expense of perspiration and patience, might succeed in making himself a pump-handle, and in persuading his teacher to be a pump. Usually, however, the patience of the pupil became exhausted, and the native remained as before a deep well of Japanese undefiled.

The old typical Japanese teacher is rapidly passing away. Like the "ripe scholar" of other lands, he has fallen out of his place, because his work was done. Learning was the chief qualification of the old native teacher; skill, ability to impart his acquisitions, were his last requirements. His chief duty was to stuff and cram the minds of his pupils. To expand or develop the mental powers of a boy, to enlarge his mental vision, to teach him to think for himself, would have been doing precisely what it was the teacher's business to prevent. So long as education consisted in a treadmill-round of committing to memory the Chinese classics, learning to read Japanese history and government edicts, to write, and to reckon on the *abacus*, such a thing as mental development was unknown. There was but one standard—the Chinese classics. Every departure from these was a false step. Everything new *must* be wrong. Under the Shoguns' government, for centuries, the suppression of mental development was reduced to a system, if not to a science. That same usurpation which robbed the true ruler of this Empire of his authority sought to crush all mental enterprise and to shackle the intellect of Japan beyond all hope of growth, science was never taught. Mathematics was confined to the four fundamental rules of arithmetic. Independent thought and investigation were branded as criminal. The might of priest-craft hedged in the mind in the direction of metaphysical speculation, the Chinese classics dominated, with a despotism that can at the best be but faintly conceived by a foreigner, over the field of politics and morals, while the all overshadowing power of the great usurper in Yedo prevented all historical research, study or composition, except what related to the distant past. Shut off from all contact with other intellects, the 'ripe scholar' and the 'great teacher' of old Japan were but schoolmen. The intellect of this nation, like the arborial wonders of the Japanese florist, with its tap-root cut, deprived of fertilizing moisture and stunted as to soil, became like the admired dwarf pines four inches high, and as gnarled and as curious as they.

The manner of life of the old Japanese instructor was to squat on the floor with his five or six pupils about him on the same seat, who supported their elbows on a sort of table one foot high. Beginning with the first, he taught each pupils the pronunciation of the Chinese characters. After the entire book had been committed to memory by sound, without any reference to sense, the pupil began again, and learned from his teacher the meaning of the characters. On the third reading, the book was expounded to the pupil. Rarely did a class number more than six pupils. The work of the teacher was simply oral communication, and that of the pupil imitation. Memorizing and copying constituted a Japanese youth's education. The old teachers of Japan and the Chinese scholars, though a very respectable body of men, did undoubtedly help to repress the intellect of their countrymen, and must be looked upon as co-workers with the bonze and the official spy.

The old teacher poured in; the new teacher must draw out. The old teacher was a drill-master; the new one must be that and more. The old one stifled questioning; the new one must encourage it. We believe it to be the right of every student to drain his instructor dry. A scholar, unless manifestly endeavouring to waste the time

of the teacher and class, should be heard and answered. The teacher should be very careful how he calls any question foolish.

The native teacher of the future must depend less on traditional authority, and more on the resources of a richly furnished mind. He must be a student himself. He must be able to get out of the ruts. He must be capable of developing the minds of youth, not merely of stuffing them. He must welcome the appearance of an unusually bright and eager mind as a gem to be polished with extra care, and not as a stone to be crushed into regulation shape and size for the common turnpike-road. The new teacher must banish his pipe and pouch, his *hibachi* and tea-cups from the school room. He must taboo his lounges and abandon the habit of being regularly sick. He must stand up to his work. ~~The great difference between a foreigner and a Japanese is that one stands up to his work, and the other sits down at it. He who can stand can do more and better work than he who sits. We have set forth our ideal of a teacher in a former paper. Is it too high for a Japanese to aspire to? We think not.~~

The measures taken, and the institution established to supply the need of good native teachers, we have described at length elsewhere. Our former article on the Tokei Normal Schools details the method pursued and the system set on foot by the Education Department, for which they deserve all praise. If the native officials are not in too great a hurry to dismiss the foreigner who now serves them, their enterprise will undoubtedly turn out, as it now bids fair to do, a splendid success. That the young men now training there have it in them to make good teachers, we fully believe. The social customs of this country and the habit of the Japanese mind are invaluable aids to the native teacher, as we have in another article intimated they are to the foreign teacher. The temptations of the new Japanese teacher are that he will yield to ease and indolence, undervalue strict discipline, and be too easily satisfied to keep in the ruts of mere authority, and thus lead his pupils after him. We hold to the belief that scholars are largely what their teachers make them, provided they are not changed frequently.

Every possible encouragement should be given both by the Government and the people to elevate the social as well as the intellectual standing of the teacher. In a country like this where the Government is creator and leader of public sentiment, most of this work must be done by the personal encouragement of high officials. It is very gratifying to know that His Majesty the EMPEROR and the EMPRESS have so conspicuously shown their great interest in education by visits of inspection to the chief schools of Tokyo. "It is the prerogative of royalty to do good by presence alone." Besides this, one who reads of the frequent and often generous private contributions to the cause of education in Japan cannot but believe that the coming native teacher will be appreciated. Certainly the mission of the teacher in Japan is a noble one, and to be envied. His country is passing through social revolutions in which he may be not only a helper but in a large sense a leader. To be one of the "beginners of a better time," to be in the advance of a new and nobler civilization, to rescue his fellow-countrymen from superstition, and to shield them from priest-craft, both native and foreign, is a high and glorious aspiration. To all, then, whether enjoying the advantages of the excellent course of the Tokyo Normal School or whether attempting self-development under foreign helpers abroad or at home, we send fraternal greetings and congratulations. We hope that soon it may be said of Japan as

emphatically as Brougham said it of England, "the school-master is abroad in the land." The teacher's office is even more honourable than the soldier's in that he defends his country from ignorance,—a foe worse than foreign enemies. The teacher may be greater than the civil ruler; for while one governs all kinds of citizens, the teacher makes good ones. That it is in the power of Japan, under that Divine Providence that is no respecter of nations, to produce as noble specimens of the teacher's calling as are Wolsey, Hopkins or Hadley in America, and as Temple, Arnold, or Jowett are in England, we do not doubt. Such men, however, are but growths of the social soil and mental atmosphere of their respective countries. To help in preparing the soil and atmosphere necessary to grow the men, character and intellects who will adorn Japan as the western lands are adorned, is the work of honour and difficulty which now devolves on the Department of Education.

#### REPRESENTATIVE GOVERNMENT IN JAPAN.

AMONGST the numerous occidental ideas imbibed by the *samurai* of the southern and western portions of Japan in their intercourse with foreigners at Nagasaki during the years which immediately preceded the revolution of 1868, by which the usurpation of the Shoguns was overthrown and the Mikado restored to his ancient position of sovereign *de facto* as well as *de jure*, one in particular excited the sympathies of men, who yet unused to the exercise of power, were still animated by generous love for the welfare of their countrymen. Born and reared under the depressing shadow of despotism, the images of freedom and of popular government were hailed by them with enthusiasm, and one of their first acts was to prevail on the Mikado to swear an oath by which he bound himself to establish a deliberative assembly, in which all questions should be fairly debated and decided, and the opinion of the whole nation be taken. Opinion was divided as to the manner in which the assembly should be constituted. Some were more inclined to create a congress on the model of that of the United States, while many hoped to establish a parliament like that of the United Kingdom. But this plan had to be abandoned on account of the manifest incapacity of the *daimiōs* and *kugis*, who under the feudal system had been carefully educated as imbeciles, and with but three or four exceptions, had taken no part at all in the movements which had brought about the revolution. Besides, accustomed as they had always been to isolation and mutual mistrust, the attempt to bring them to act in common would have proved hopeless. On the other hand it was thought that the common people, composed of farmers, tradesmen and artisans, had too long suffered under the dominion of the sword to have any feeling of existence as part of the body politic, and would not have understood or appreciated the boon of the franchise, so that the election of a House of Commons would have been as difficult as the summoning of a House of Peers.

In the face of these obstacles to the realization of their project, the leaders of the revolution adopted a third expedient. Three *samurai* were to be furnished from each large daimiate, two from each of medium size, and one from each of the smallest. They were nominally to be selected by their respective *daimiōs*, but in reality they were chosen by the leaders among the retainers of the *daimiōs*, and as the former only held this position in virtue of their popular influence, the representatives may be said to have been elected by public opinion as it existed among the two-sworded men. The "Constitution" pro-

mulgated in March 1868 expressly declares that the men were in fact members of parliament. It further says: "The object is to arrive at the opinion of the majority. The number is fixed, but the period of service is unlimited, and they obey the directions of their princes."

The nominees of the *samurai* or lesser nobility met first at Kiôto some time in 1868, and for a while their proceedings were marked by great good sense. They held a debate upon the colonization of Yezo, a translation of which appeared in the "Times," and excited great hopes of the future of Japan among Englishmen, who are ever ready to sympathize with the struggles of other nations to attain the liberty they themselves so highly prize, and naturally regard with a friendly eye the establishment in other countries of institutions similar to their own. In 1869, the seat of the assembly, called in Japanese *Giji-In*, was removed to Yedo, and was duly opened on the 18th of April, a message from the Mikado being communicated according to western custom. Various subjects were brought forward, one of which was the question of partnerships between Japanese and foreigners. The opinions expressed by the speakers were generally adverse to allowing such partnerships, and most of them seem to have been extremely hostile to foreigners. This was unfortunate, for the government which had established the assembly was at this moment particularly desirous of keeping on good terms with the Treaty Powers, and of repressing the anti-foreign feeling which in other days and under other circumstances it had fostered for its own ends. In June a debate of great importance took place upon the formation of a new Constitution, but no decision having been arrived at, the Government took the matter into its own hands, and decreed in the name of the MIKADO the abolition of the daimiates, and the re-arrangement of the whole territory into *Fu*, *Han* and *Ken*. This was the first step towards the establishment of the present system of centralization, and the knell of the so-styled Parliament. The debates which followed showed in fact the necessity of suppressing it. The subjects proposed were the abolition of *harakiri* at the pleasure of the individual, and of the practice of carrying swords by the *samurai*. Two hundred out of two hundred and nine voted against the former proposition, and a house of two hundred and thirteen members rejected the latter unanimously. The spirit which animated the two-sworded class was evidently in direct opposition to the views of the Government, and the usual course was shortly adopted, namely, that of adjourning the assembly *sine die*. It was finally abolished altogether.

In August, 1871, when the feudal system received its *coup de grâce* by the conversion of the *Han* into *Ken*, and the Government was re-made, one of the three Councils, of which it was thenceforth composed, was named the *Sa-In*. This Council was intended to take the place of the original deliberative assembly, but its constitution was in no way representative. All its members were nominated by the Chief of the State, like those of our own Privy Council, to which it bore a faint resemblance, and they were of various grades of rank, instead of having each an equal voice. There were a President, Vice-President, first-class deliberators, second-class deliberators, third-class deliberators, fourth-class deliberators, first-class students of deliberation, second-class students of deliberation, third-class students of deliberation and fourth-class students of deliberation. What were its functions nobody could tell. The Japanese themselves laughed at it, and said that it was a sort of refuge for all kinds of political visionaries, who thus had an opportunity of ven-

tilating their theories without doing any harm, because their debates were never published. It is no use to pretend that this feeble institution, which has languished on even until the present day, was ever a Parliament.

We have been at some pains to sketch the history of attempts at representative bodies in Japan since the revolution, because it shows beyond a doubt that the desire for something of the kind does exist, and may at no distant date make itself audibly felt. To what other cause indeed can be attributed the constant curiosity of Japanese upon this part of occidental systems of Government, and their minute and often trifling inquiries into its organization, down to the salaries of the very doorkeepers? It may be presumptuous on our part, imperfectly acquainted as we are with the requirements of the people, to attempt to suggest how a National Council should be constituted, but we will nevertheless venture to make a few suggestions.

The most important function of such an assembly, after the passing of laws calculated to secure equal impartial justice between man and man is undoubtedly the fair apportionment amongst the members of the commonwealth of the burden of taxation. From comparatively ancient times in Japan the governing powers have possessed a large revenue, the amount of which when calculated in money is only liable to be affected in seasons of great scarcity, because in years when the harvest is but slightly below the average the deficiency is made good by the enhanced value of the yield. We allude to the so-called land-tax, which is in reality in the nature of a rent-charge upon the land, and which was until a year back payable chiefly in rice. We have in a previous article, published in our issue of the 5th July last, explained that the payment in kind is now commuted into one in money, not calculated upon the value of the hitherto-existing rent-charge, but on the estimated value of the land, the rent-charge being henceforth abolished. This change we hold to have been unwise and unfair, because it has disturbed the value of the land, which, taken into consideration with the depreciation of the value of money, notably since the opening of the ports to foreign trade, has been pretty constant for the last two hundred years. The mischief has however been done and is irremediable, but it does not affect the fact that the Government remains the owner of a considerable fixed income from land. This income is however liable to certain payments in the nature of a jointure, namely the hereditary pensions, or whatever they may be called, of the *ex-Daimiôs* and *Samurai*. The amount of this annual charge is estimated at nearly 5,000,000 *koku* of rice, equal at present rates to 25,000,000 of *yen*. Of this sum the *ex-Daimiôs* and *ex-Kugés* draw the equivalent of nearly one million of *koku*, and there is no doubt that it is far in excess of what they are in justice entitled to, for while the incomes of the *ex-Kugés* are small, and are not in any case as much as 3,000 *koku*, those of the *ex-Daimiôs* were fixed in 1869 at one-tenth of the assessment of their former dominions, which in the case of the *Kokushiu Daimiôs* is an enormous sum. The ex-Prince of Kaga actually receives the value of over 100,000 *koku*. This is of course far more, probably by three-fourths, than what he actually received as a *Daimiô*, after deducting from his nominal revenue the pay of his thousands of two-sworded vassals. These incomes ought to be reduced, but those of the *Samurai*, which have been the hereditary property of their ancestors for two centuries and a half, ought to be held sacred. Many of the latter would no doubt be glad to exchange their present life of idleness for com-

mercial, manufacturing or agricultural pursuits, but living as they do on small annual incomes and possessing no capital they have not the means of entering upon any of these careers. A simple remedy for this state of things, which condemns a large section of the best intelligences to enforced inactivity, would be to convert the hereditary pensions of the *Samurai* into a national debt, which could be bought and sold like ordinary government stocks, thus giving to those who were inclined to turn merchants, farmers or manufacturers, the means of obtaining a capital to start with. What would, however, be said of a Government which, in defiance of common justice and honesty, actually contemplated abrogating the rights of these men, and throwing them on the world without a penny? There have been rumours afloat of such an intention, which are perhaps not altogether without foundation; but for the sake of the national credit which is involved in that of the Government, it is to be hoped that it will never be carried into effect. As matters stand at present the Crown enjoys a large permanent income of  $6\frac{1}{2}$  millions of *koku* clear.

At the present rate of 5 *yen* per *koku*,  $32\frac{1}{2}$  millions of *yen* are, according to our calculation, available for the ordinary purposes of administration from this source alone. According to the Vienna pamphlet and the financial statement put forth by the Government in June last, it gives a somewhat larger result, owing probably to different estimates of the value of the *koku*. This must naturally fluctuate from year to year, and it will always be necessary to supplement the permanent revenue by taxation. According to the estimates for the present year the sum of about  $5\frac{1}{2}$  millions of *yen* is needed for this purpose, and to determine the most equitable means of raising the necessary amount by taxes is the function of a representative assembly.

In the month of April last a meeting of the prefects, or *kenrei*, and their chief assistants was summoned at Yedo to discuss certain propositions of the Treasury relative to taxation, but for reasons which have not been made public their deliberations had no result. It was whispered that the local authorities, who felt naturally bound to protect the interests of the populations confided to their charge, were averse from the imposition of additional imposts upon the already heavily burdened peasantry, and we see in this spirit the germ of what may some day be developed into a representative assembly suited to the political circumstances of this country. All attempts to adapt foreign political institutions of this kind to Japan have hitherto failed, and it is evident that to make the representative system work considerable modifications must be introduced.

Japan is at the present time divided for administrative purposes into three *Fu*, or cities, and sixty *Ken*, or prefectures, so that by summoning the chief official of each, a chamber of sixty-three members could at once be formed. If this number were not considered sufficient the second official of each, called a *sanji*, could be added, thus giving one hundred and twenty-six members, and as one month in each year would probably suffice for the discussion of the supplementary budget, the inconvenience produced by the temporary absence of the responsible authorities would not be very great. These sixty-three, or hundred and twenty-six, members would form an Upper Chamber. The Lower Chamber should be composed of, say, two members for the rural population of each *ken*, and one for each town of 100,000 inhabitants. The three cities of Yedo, Kiôto and Ôsaka would, of course, be entitled to two or more members each. It is also possible that the rural population in some large *ken* is above the average, in which case the number of members might be

increased in proportion. It would, however, be inconvenient to have too large a number of members at first, and probably two hundred and fifty seats, if properly divided, would secure to the agricultural and commercial classes an equal representation. All persons who were inclined to offer themselves for election should be allowed to do so, and to ensure the maintenance of a disinterested public spirit the members should receive neither salary nor travelling allowances. In the rural districts the franchise should be limited to farmers cultivating at least 10 *chô* (40 acres) of land; in the towns, where the average rate of intelligence is much higher, it should be given to all householders who rent or own houses worth over one hundred *yen* of annual rent. These rates may seem to restrict the franchise more than would be tolerated in England, but in Japan the want of education of the masses would render it necessary to proceed cautiously.

Such are the main features of a scheme for a representative assembly which we believe would be found suited to the present political state of Japan. It might be found impracticable at first to confer the power of actually deciding the questions brought before it, but great weight would attach to its opinions if publicly recorded, and the Mikado's Government, instead of being a general object of half concealed dislike and distrust, might, by endeavouring to adapt its measures to the expressed wishes of the people, gradually win their confidence and hearty support. Despotism has a natural tendency to degenerate into tyranny, for the unrestricted exercise of power makes men regardless of the feelings of those who are subject to their will. It may savour of Utopia to believe that any dominant class will willingly surrender absolute authority, but history proves that its decay is the natural law of human progress, and blind disregard of this truth is what leads to overwhelming catastrophe.

#### THE SHIMONOSEKI INDEMNITY.

THE views we expressed last week on this subject have produced a rejoinder which deserves a few words of reply.

It is quite possible that the people of the United States were all the more inclined to waive their share of the Indemnity on account of the small part America took in the action which extorted it. It is also possible that the claim of the American officers who took part in that action have been subordinated to those peculiar views of the American Minister of Finance which induced him, on the recent payment of the *Alabama* Indemnity, to claim and retain the money for the State, a proceeding so mysterious and equivocal that the American Press, from the *Nation* downwards, has denounced the act in terms which we do not care to repeat at this moment, but which are not one whit too severe for such a proceeding. But with all this we have nothing to do. The question is this:—Is it desirable that the other three Powers should demand the payment of this money?

To answer this we will adduce a recent illustration. The Indemnity extorted from France by Germany was just—we have nothing to do with its harshness—because the people who paid it were the people who waged the war, and they remained, after the war, and to this day remain, in a state of violent antagonism to their victors, cherishing the idea of future revenge, and transmitting to their children feelings of bitter hatred against that Germany to which they were long such arrogant neighbours, and which in one short year revenged itself for centuries of heartless neighbourship. The two contending powers were of equal force and pretensions in the eyes of the world.

They were equals in dignity and power. They fought on even terms, and we can hardly forget that universal surprise was felt at the rapid and overwhelming successes of the Germans. The French appealed to the sword and perished by it. Had Fortune decided otherwise, a similar claim would have been made on Germany, who risked this tremendous punishment by picking up the glove which France had thrown down.

Apply this to the case of the Shimonoseki Indemnity. Nearly ten years have elapsed since the action was fought which determined it. The Government, the nobles and the people were then against us to a man. We had broken through their cherished isolation. Our advent seemed to them the presage of the dismemberment of their country. They imagined their very national existence was at stake. They were confident in their own strength and utterly ignorant of ours. They measured that strength not only against races accustomed to war and born to subdue, but against a science of which they had no conception, and the knowledge of an art which we had carried to virtual perfection. It is idle to talk of equal terms. We were forced to punish and we punished; but from the first there never could have been a doubt as to the result of our determination and our process. But now all is changed—the temper of the people, their attitude towards us, and the attitude of their Government. Our advent caused them civil war and organic revolution by which they have been greatly impoverished. Our presence among them has been by no means an unmixed good. The nobles who instigated the old arrogant policy have disappeared. The generation which contended with us has passed half its allotted term of existence and learnt to look upon us as friends. It cherishes no spirit of revenge and harbours no feelings of antagonism. It recognizes our superior power and bows to our superior wisdom. Its hostile act was dictated by patriotism, however blind; its submission by a conviction of the folly of measuring its strength against ours.

It is for these reasons, therefore, that we wish the claim for money to be waived. We have not gone so far as to say that the Japanese must not take it into consideration, and that the exaction of it would be an immoral or legally unjust act. We desire, indeed, that they should give equivalents for it in commercial facilities, or liberal concessions in regard to our relations with the country. These are to our common interest, and could easily be offered and arranged for. But we deprecate the carrying of a large sum of money away from the country. It is the dread—we had almost said, the shame—of this from which we shrink. We are reproached for paying but a poor compliment to Japan in supposing that the demand for half a million of money would embarrass her Treasury. We are told there are twenty millions of dollars in gold at Yedo, that the last English loan can be dipped into for the Indemnity money, and that our demand represents no more than a year's speculation and waste of the colonization department. All this may be true. But who can desire to see the comparatively small sum of bullion diminished on which the stability of the paper currency mainly depends? Or can it be wished that a loan contracted for widely different purposes should be diverted to pay an old claim for which equivalents in commercial advantages, if offered, would be gladly accepted? Such suggestions are in themselves an evidence of the expedients which would have to be resorted to for the payment of the money. In the hands of a rigid European Minister of Finance neither of these funds would be considered available for such a purpose.

In regard to the first he would say:—"This bullion represents the basis on which the whole floating debt of the nation rests. If once it is touched, a precedent is established for resorting to it again on any emergency, and when it is known that the fund is so treated, the confidence in its existence—a confidence necessary to the stability of the paper currency—will be destroyed, and the country might instantly be brought in to confusion and rebellion." As regards the other fund, he would argue:—"This money was borrowed for a specific purpose, and that purpose was clearly defined when the loan was made. We told our English creditors that it was required for the purpose of extinguishing the Dai-mios' claims; for that purpose alone have we any right to use it; and I will not give my sanction to the use of it for any other than this purpose. Our creditors would have just cause of complaint if we thus misappropriated money borrowed from them with a distinct and avowed object in view, and if we do these things we shall ruin our credit: I will touch neither the one fund nor the other." The Finance Minister would be perfectly right in this view;—nay, more, it is the view he is bound to take, and the Government will, in our opinion, do itself serious injury if it resorts to either of these funds for the purpose in question. Its credit both with its own people and ourselves should be its first care, and it will damage this credit—in our eyes if it resorts to either of these funds to pay this claim, in the eyes of its people if it resorts to the national currency fund—should it listen to and act on any such suggestions.

But, if there are difficulties on both sides in regard to the payment of this money—if the creditor is anxious not to take it, and the debtor has no superfluity out of which to pay it—what is obviously the best method of adjusting the obligation? Surely, by the offer and acceptance of equivalents which, far from decreasing, will increase, the wealth of the country, as commercial concessions must do. The Japanese will do well to remember that however much the three Powers may dislike taking the money, there is no actual bar to their doing so. It would not be immoral or open to reproach from an ethical point of view. They will say to the Japanese:—"We disavowed all desire for the money and you yourselves know we did not wish to take it. We were prepared to accept equivalents, and you had them in your hands. If you refuse them, it is you who force us to take the money, not we who extort it."

We ardently desire a different result, but cannot help avowing that it lies with the Japanese to bring it about.

### Correspondence.

TO THE EDITOR OF THE *Japan Weekly Mail*.

Yokohama, 12th December, 1873.

SIR,—I observe by the China papers that Mr. Hart, on behalf of the Chinese Customs, has definitely declined to take any steps towards preventing the silting up of the Woosung bar, and (therefore, virtually,) the closing of the Port of Shanghai. The water on the Bar within the last ten years has been reduced from a minimum depth of 17 feet to 9 feet at low water springs. Every one acquainted with the past history of Shanghai and its present orderly and well-regulated condition must appreciate the injustice of saddling the settlement with this great additional expense and responsibility. But, as the matter now stands, some immediate steps must be taken to clear the obstructions at the entrance of the Wongpoo, but before going to the expense of costly machinery, I think it may be worth while considering whether a system of "spurs" or "groynes" (by which the river is made to assist in deepening its own bed) could not be effectually carried out there as it has

been in this and other countries. The cost of this would be trifling, as it consists merely in driving wooden piles in certain positions so as to turn the stream in desired directions. This, of course, must be carried out under proper professional advice, as I am fully aware of the danger of tampering with the course of a river. I have no malicious desire to test the point, but it appears to me to possess this recommendation that the experiments may be tried at the expense of the Chinese Government, who fail to see the necessity of improving the river approaches to Shanghai, while deriving a very handsome revenue from its trade.

The onus now being thrown on Foreigners, I imagine they are justified in taking steps to preserve their property, and if some morning the good citizens of Woosung should wake up to find a large slice of their town adrift in the Yang-tze-kiang, it may have the practical effect of bringing them to reason. A case in point in illustration may be cited here. During the course of the construction of the Rokugo Railway bridge, the local authorities (who were then under very loose control by the Imperial Government) persisted in erecting "spurs" in such a position that they turned the course of the river against the piers of the Railway bridge on the opposite side. The late Engineer-in-Chief, after vainly protesting, and observing that the freshets were undermining one of the piers, so that within a single night the channel had scoured itself a depth of 18 feet where previously there had been but 3, caused another lot of "spurs" to be erected which turned the stream on to the opposite bank towards the town, for the preservation of which the local authorities were compelled to build retaining walls, &c., the expense of which proved, I think, a strong and valuable practical argument.

The closeness of the interests of our two ports must be my excuse for addressing myself to this question, and I trust that my suggestion may elicit more extended information on this subject from abler authorities.

I am, Sir,

Your obedient Servant,

J. P.

## Law Report.

### H. B. M.'s CONSULAR COURT.

Before Mr. Consul RUSSELL ROBERTSON.

December 12, 1873.

Wm. Alex. Smyth, in the Japanese lighthouse service, was brought up on a warrant of arrest charged with having, on or about the 15th December last, at Nabeshima, in the province of Sanuki, made an assault on the wife of one Kondo Komei, a Japanese lighthouse keeper, with a view of feloniously ravishing and carnally knowing said wife of Kondo Komei.

The accused, in reply to Court, pleaded not guilty to the accusation.

Mr. Dickens, who appeared for the accused, said, that on behalf of his client he must take exception to the manner in which he had been arrested. According to rule 283 of the Order in Council, no arrest could be legal unless the information filed had been sworn to on oath by the principal or some responsible witness; whereas, in the present instance, the information was founded on merely hearsay evidence, as far as he understood the matter. There was nothing sworn to in support of the accusation. This was distinct, as far as the rule went. His objections, therefore, were based on the insufficiency of the grounds in pursuance of which the warrant in the present case had been acted upon.

Owing to the absence of Mr. Davidson, counsel for the plaintiffs, Mr. Brunton, representing the lighthouse service, said that he would prefer that the case should be remanded for twenty-four hours.

Court remarked that Mr. Dickens' objection was a serious one; but that, unfortunately, the warrant had been issued on the strength of the information brought before the Court.

Mr. Dickens further remarked, that according to rule 291, he thought that accused could not be compelled to give bail, in case of a remand, until the conditions he had stated had been complied with.

Court, to counsel for accused: How do you construe rule 300?

Mr. Dickens admitted that certainly the rule in question appeared to be at variance, but that notwithstanding, to his thinking, it would

be necessary to issue a fresh warrant. As for the rest, his client had already been put to sufficient inconvenience in the matter.

The Court here decided to remit the further hearing of the case until to-morrow, at 10 a.m. In the meantime the accused would be at large.

The accused was accordingly discharged from custody.

Before Mr. Consul RUSSELL ROBERTSON.

December 13, 1873.

Wm. Alex. Smyth was brought up this morning on remand from yesterday, charged with having, on the 15th December, feloniously assaulted with intent to ravish and carnally know the wife of one Kondo Komei, a lighthouse-keeper in the Japanese service.

Mr. G. Davidson, on behalf of the Japanese Government, appeared for the prosecution. In the course of his remarks, he observed that on the first hearing of the case he had been unable to appear. He would now ask that it might be remanded for ten days, in order to allow time for procuring testimony. His witnesses had not yet arrived, but might be expected by the 20th inst., per steamer. He hoped that his learned friend, Mr. Dickens, would see no objection to such a course. Mr. Davidson concluded by urging that the accused should be bound over to re-appear in his own recognisances and some responsible surety.

Mr. Dickens, for the accused, said that he had no objection to his client entering into his own recognisances to appear when called on, but he certainly thought that he ought not to be put to the trouble of finding a surety. Counsel then proceeded to read the law of the case, as indicated in rule 291 of the Order in Council, maintaining that, according to said rule, his client was not bound to find any such guarantees, as the action now stood. The evidence on which his client stood charged was simply hearsay evidence, as he had stated at the previous hearing. What was wanted was properly sworn evidence, the statement of some person who knew something of the matter. He submitted that it was decidedly unfair that his client should be compelled to find the surety asked for by opposing counsel.

Mr. Davidson argued, on the contrary, that the clause referred to by Mr. Dickens had reference to an examination in chief, and cited Rule 300 in support of his present demand. He observed that no witnesses had yet been examined. In the event of the prisoner being brought up for trial, the rule cited by his learned friend would be applicable. It was certainly at the Judge's discretion whether the accused should be allowed to go at large, or be bound over, in suitable guarantees, to re-appear. He submitted that, in view of the gravity of the present accusation, the latter course was the only one to pursue.

Some further argument followed from both counsels; Mr. Dickens observing that the application of Rule 300 to the case was extremely doubtful, and that in such a case the advantage should be given to the accused; also, that in the event of his client gaining the case, there was little chance of his securing damages or costs.

Mr. Davidson remarked that the question under consideration was one of the remand only. His learned friend was rambling away from the point at issue.

The Court said that, after mature consideration, in view of the gravity of the charge, and the fact that the accused would have no difficulty in procuring a surety, as he was well known, he would be required to enter into his own recognisances in the sum of \$500, and to find a surety in the additional sum of \$500. The next hearing of the case would take place on the 23rd instant.

### H. B. M.'s CONSULAR COURT.

Before Mr. Consul RUSSELL ROBERTSON.

16th December, 1873.

STIBOLT v. SCOTT.

This case, which had been remanded from the 9th instant, was heard on Tuesday morning. After some further evidence and argument, the case was dismissed and the accused set at liberty.

THE MODE OF TRANSMISSION OF CHOLERA.—Contagionists and anti-contagionists should pay particular attention, the *Lancet* says, to the fact that, in the present epidemic in Paris, the disease has repeatedly broken out in a hospital ward, where one or two persons were attacked and died, the rest escaping entirely. It is difficult to trace contagion in such cases; and M. Legrand, in *l'Union Médicale*, justly asks how the believers in the dejection contagion can explain this. We have also the theory of the winds which are supposed to carry the virus in their course. The mode also is open to question. In 1865-66 the whole seaboard of the Mediterranean was visited by cholera, save Sicily. Here a regular cordon was established all round the island, and no vessel was allowed to approach the coast. Of course such a cordon had no power over the winds, but no cholera appeared in Sicily. It is incumbent on governments to see to this, and prevent any communication with infected districts, or vessels coming from countries where cholera is raging.

## Christmas.

Bring ivy, bring the holly and the bay,  
Glad hearts that smile with winter's brightest weather,  
From them we learn our cares to put away,  
For Christmas-tide bids us rejoice together.  
"Goodwill and peace," the message angels brought,  
From star to star it still is onward ringing,  
From friend to distant friend the words are caught,  
A chain of love around the wide earth flinging.

From land to land it echoes still,  
Goodwill and peace, peace and goodwill.

And though for us the merry Christmas-time  
Seem buried deep beneath the changing years,  
Though such sad memories blend them with the chime  
As change our gladness to a burst of tears  
With thought of dear ones gone for evermore—  
Nay, say not *that* beneath the Christmas skies,  
Nor weep for those not lost but gone before,  
Rather to meet their song let ours arise.

Goodwill and peace it echoes still,  
And answers back, peace and goodwill.

He came a child. Let little children's mirth  
Still crown for us the day when he was born.  
Goodwill to men begun his life on earth,  
Goodwill to men salute the Christmas morn.  
Old wrongs forget, old anger put away;  
New tenderness for sorrow, care and pain;  
Thus shall we best keep holy Christmas day,  
And in our hearts the Christ be born again:

That so the echo ne'er may cease,  
Peace and goodwill, goodwill and peace.

S.

## Extracts.

### MARK TWAIN.

(*Spectator.*)

Mark Twain's lecture at the Hanover Square Rooms on the Sandwich Islands will remind many of us of the inimitable lecture delivered by Artemus Ward some six years ago at the Egyptian Hall, Piccadilly, on his lectures among the Mormons and elsewhere. Indeed the two transcendental humourists resemble each other in the complete absence of apparently straightforward simplicity of manner with which they make their humorous points. Mark Twain himself even carries this nonchalant to excess. He hurries over some few of his points with so little emphasis or significance of air that they are lost upon the audience, who did not catch his joke at all, for instance, when the present writer was in attendance, about "the long green wall of the Pacific." But though this perfect calm and assumed indifference of manner is common to the two humourists, there was something much more comically childlike, much more of serious inward embarrassment and bewilderment at the core of the humour of Artemus Ward than in that of Mark Twain, who is the easy man of the world throughout, and whose humour consists in the unconscious, half-cocked way in which he habitually strikes false intellectual notes, the steady simplicity with which he puts the emphasis of his efforts in the wrong place, with which he classifies in the most unassuming way, as families of the same tribe of things, the most irreconcilable common nouns, and so glides into sarcasm or caricature, without looking to the right or the left, the even factor of his way. For instance, he began on one of the evenings with referring to the complaint that he had not been well heard of in the hall, and threw a tone of high moral ardour and resolve into his promise to make himself adequately heard, which delivered as it was, with the utmost immobility and gravity of demeanour, was irresistibly humorous. And then he glided off to the gratification of his wish to gratify the violent temporary curiosity of his audience for information about the Sandwich Islands, and then he came on as if the fame of the Sandwich Islands was a capital every month, and anxiety about them the

ruling passion of every heart. The humour in all this was the anxious travesty of the intellectual assumptions of the easy man of the world which it suggested. The ease and frankness of the speaker impressed you with his complete command of all the social currents of the day; and then the oddity of the false notes, touched so easily and in such apparent good faith,—the virtuous ardour about making himself heard,—the resolve either to appease or to stimulate to a still higher level of enthusiasm the assumed thirst for knowledge about the Sandwich Isles,—became in the highest degree grotesque. It was the same when he confessed casually to the audience the kind of problem which had exercised his mind most in connection with this subject; and his belief that it belonged to that region of the unknown and unknowable which it is the mere knight-errantry of reason to attempt to explore. This problem was "why the Sandwich Islands should have been put away out there in the middle of the Pacific Ocean,"—a point which he declared to be not really "open to criticism," so that it would not be "graceful to dwell upon it." This specimen of the kind of transcendental difficulty by which he was haunted, and of the moral extinguisher which he put upon it, carried on the ludicrous conception suggested of a man of the world with a strange topsy-turviness in his intellectual constitution; and the same notion ran through a good part of the lecture, so far at least as it was humorous, the defect in it as a work of art being that several portions,—the descriptive portions, for instance, which were very vigorous and graphic,—had no relation to this main thread of humour, being in fact terse and imaginative descriptions of the scenery such as any man with a keen eye and a good oratorical faculty might draw. Even the humorous features of the lecture were not all of the same type. There was some good mimicry and not a little rather commonplace fun at the expense of native manners and the old cannibalism, such as the remark that the Kanaka men, not being "proud," used to wear nothing but "a smile, or a pair of spectacles, or any little thing like that;" or the story about the cannibal Kanaka who wanted to try "how Europeans would go with onions," and who, after eating the tough captain of a whaler, died of "the crime on his conscience and the whaler on his stomach." In fact the commoner humour that consists in happy extravagance was no insignificant part of the fun of the lecture,—in that showing its inferiority to Artemus Ward's, whose humour was everywhere penetrated with a moral coherence which very much set off its intellectual incoherence.

Again, some humorous touches of Mark Twain's were mere epigrammatic applications of strong sense to the facts of savage life, as when he said that by the help of the Europeans, the Kanakas had been more completely and universally educated than any people on the face of the earth, and that "if only the Europeans could have augmented the native capacity, they would have made that people perfect;" and as when,—that augmentation of capacity being assumed as impossible,—he spoke, with more logical consistency than appeared on the surface, of the blessings of European influence to the Kanakas as having consisted in "complicated diseases, education, civilisation, and all sorts of calamities" (whereby their numbers had been reduced from 400,000 to 50,000), and anticipated that Europeans would "start a few more seminaries of learning among the natives,—and finish." This sort of humour, it will be perceived, is quite different in kind from that which consists in playing the quaintest possible variations on the ordinary intellectual and moral assumptions made by a man of the world, for it depends indeed on a stronger and more masculine use of those assumptions than ordinary men ever make. Some touches, too, of Mark Twain's were due to the well-known genius of the American language, which invents such admirable vernacular phrases for moral feelings, and is wont to express the rather rare emotion of surprise with so much of calm equanimity as to multiply tenfold the force of the emotion. What could be better, for instance, than the adjective for native affections contained in the following comment on the generous liberality with which Kanakas adopt mothers,—that if a Kanaka's affections are "liberal and stretchy," he may have at least a hundred and fifty mothers?—or than the delightful matter-of-factness of the remark supposed to have been made by a sugar-planter to a Kanaka who had asked for three holidays in three weeks for the purpose, on each occasion, of going and burying a mother,—"It does seem to me that your stock of mothers holds out very well"? The humorous impassiveness in the American speech is, of course, used by Mark Twain to the greatest possible advantage. For instance, after depreciating the dogs of the Hawaiian Islands as a feeble breed whose only strong point is their curly tails, he told his audience, that a friend of his assured him that if he ever had one of these dogs of his own, "he should out the tail

off, and throw the balance of the dog away." That calm treatment of the elements of the dog as if they were elements of a pecuniary transaction is essentially American, and belongs not to the individual humour of Mark Twain, so much as to the characteristic humour of the country from which he comes. But the humour of the remark that you might have all climates in the Sandwich Islands, from a permanent average of 80 degrees at the foot of the mountains, through every intermediate temperature as you ascend, down to a temperature at the top "so miserably cold that a man can't tell the truth," was all his own, and one of the finest illustrations of his curious power of striking, with easy matter-of-fact simplicity, a most grotesquely strange note, in the midst of the calm and business-like statements of an ordinary man of the world. To assume the cold as taking effect, not on the intellect, but on the conscience, is as genuine and real a surprise as the vagaries of humour ever invented; and when given with that perfect composure of easy common-sense with which Mark Twain drops it out, it produces a most telling effect on the audience. On the whole, though Mark Twain cannot be regarded as so remarkable and rare a humourist as Artemus Ward, no one with any appreciation of the great originality of American literature in this direction will hear him without thorough enjoyment, and at least some new memories of the kind which make a man laugh suddenly at unexpected moments as the flavour of a dry saying comes back to him. His higher humour is not sustained, but it is eked out with so much skill of anecdote, so much command of American idiom, and such powers of mimicry, as to furnish an entertainment perhaps even more generally popular than Artemus Ward's inimitable lectures themselves.

#### THE ASHANTEE WAR.

The necessity for the Ashantee War seems to be at last generally admitted, though for reasons which are almost farcical in their ineptitude. The King of Ashantee, a singularly blood-thirsty barbarian, took it into his head either that a tribute of twopence-halfpenny a year, which was or was not paid to him by the Dutch, ought to be still paid to him by the English; or wanted a territory on the seaboard which belonged to us; or, as we believe, was mortally provoked by the supersession of a people who refuse to commit that particular form of crime. He, therefore, made a sudden raid into British territories, with a purpose and plan of driving the British into the sea, killed as many of our dark subjects as he could, attacked our fort of Elmina, and retained in some dungeon four British Missionaries engaged among a tribe under British protection. Had the invasion happened in Jersey, we should be by this time at war with France; had it happened in India, the Chief of the guilty tribe would be in lifelong confinement as a State prisoner, and the victory probably not mentioned in the *Gazette*, but as it happened on the Gold Coast, where there are no sanitary arrangements, and our capital, instead of being fixed in the healthy region selected by the natives, is fixed at the lowest point of a dangerous Terai, or marshy slip between the sea and the mountains, it was supposed by everybody but Government and the Anglo-Indians to be better to patch up a peace. People might die if we didn't, and as we pay only £20,000,000 a year in order to secure persons who will die for the national honour, the idea of war was determinately deprecated. Our territory had been invaded, our allies massacred, our flag threatened, but still it would, according to the *Times*, have been much wiser to do nothing except repel Ashantee attacks. It happened, however, that Commodore Commerell wished to make a reconnaissance, made it, was entrapped by false intelligence into an ambushade, and with two or three officers and a few men was severely wounded. Thereupon we have an admission that the war, which was indispensable for Imperial interests, and even to maintain Imperial pledges to our own tribes, was indispensable to punish a bush-trick, and should be waged upon a fitting scale. Only it must not be so waged as to be of the slightest use. If we are not to occupy Coomassie, to defeat the Ashantee army, to replace the King by some civilising Prince, and to make trade indisputably safe in the high and healthy region, the war is of no use, and we shall have waged it not for the benefit of the Empire and mankind, but for a point of honour which is the merest triviality. What we are fighting for is to subject, under one form or another, a large region of Africa to civilised authority; to give a grand territory a chance of peaceable and free development, and to open up a trade which, if the reports about the gold mines are true, may be as valuable as the trade with any colony?—not to give the Ashantee chief an opportunity for shedding a little more blood per diem than usual, because he is half angry and half frightened. As for the cue

given by Sir Stafford Northcote's attack, it is utterly unworthy of him both as a statesman and as the man who managed the Abyssinian war. He actually pleads for a summons to Parliament to vote war when our territories have been invaded,—when the only thing to be done is to repel the invasion at once by the only reasonable means—a smash up of Coomassie. Supposing the Administrator of the Coast to have had the power at hand, would Sir S. Northcote blame him for repelling invasion as fiercely as he could; and what difference does his powerlessness make? Would Sir S. Northcote cashier a post-captain for returning an enemy's fire before Parliament had voted the expenditure necessary to replace the shells? We know quite well that he would not, that his speech was dictated by party bitterness, and that in Lord Kimberley's place he would have acted just as Lord Kimberley is doing: but he should remember that on questions of war England knows of no parties, and that the party sacrifice he would instantly make in a great war is equally required of him in a little one.

We are happy to perceive that the Government have decided on the larger policy; that they have, at all events, decided to reach Coomassie, and defeat the man who reigns there, killing twenty-five human beings a week; replacing him, let us hope, by Prince Ansah, or better still, by the first Indian civilian they can catch; or best of all, by any of half-a-dozen dare-devils of experience whom they have at command, and who, with a Mohammedan guard, would rule the Ashantees till the tribe had renounced its tradition of war for the regular pursuits of agriculture. Colonel Gordon, Mr. Gifford Palgrave, Captain Glover, or any one of a dozen Indian Generals sauntering about at home, would keep Ashantee as quiet as Jamaica, and leave the people to cultivate in peace, without a shilling of expense to the British Treasury. The transmission of the railway, of the steel steamers built to float in three feet of water, of three thousand Europeans, of traction-engines—though, of course, the *tsetse-fly* will kill them in the papers in a day or two—of all the stores which seem so limitless when real work is meant, prove that their minds are made up to avoid defeat, and that their proceedings are directed by some intelligence. If they do not send the telegraph cable, so much the better. Cable telegrams from a seat of war are very pleasant things for journalists, and for those who are waiting wearily for news of their relatives, but unfortunately they can carry messages both ways, and nothing cripples dashing operations, such as will be required in December, like a wire rope round the neck of the Commander-in-Chief, to be tugged at by War-Office clerks. The business of Government at home is to see that its General is competent—which has been done—to see that a man to replace him is ready on the spot if he should be killed—which has not, we think, been forgotten—to forward him all he needs, and think about what he does need, such as small condensing engines to supply absolutely pure water, and quinine without stint; and then to send as few orders as possible. As yet we see no reason to suppose the force too small, especially commanded as it will be, for we do not believe in all those stories either of the heroism of the Ashantees—who are distinctly inferior to our own drilled sepoy when in mutiny, and will run away as they did—or in the difficulty of disciplining native allies. They are not going to fight Prussian grenadiers; they are better armed than their foes; they will have the shells with, instead of against them; and they will need but rough drill, and one single conviction,—that running away will be exceedingly dangerous to themselves. The demoralisation stories are stories of yesterday, not of to-morrow,—of men who could run away safely, not of men who could be punished if they ran. We do not believe in one-legged races of men, or that any moderately sized force, fully paid, fully equipped, and kindly treated, but organised on the simple Roman maxim that the soldier must dread his officer more than his enemy, can ever fail to be formidable in presence of an equal foe. The numbers in these wars matter nothing. People in England talk about Ashantee bringing 200,000 men into the field, till they do not know what they mean, and dream of a Sadowa, forgetting that the chief can bring no more men to an engagement than he can feed; that if his few picked troops fly, his mob will fly faster; that Sir G. Wolseley will have double or triple the force with which Clive scattered an army containing 25,000 Pathans and Rohillas—men as brave as Englishmen, and born soldiers—1,100 Freuchmen, and a limitless mob of Bengalees. The Ashantees are uglier, to be sure, but ugliness does not ensure courage; nor will scowling faces dread our soldiers less than men with the quiet Aryan port. We do not believe that Ashantees love to be murdered as their King murders, any more

than blacks do in Virginia; and have a strong belief that we shall find in Coonassie, as every where else outside Europe and the United States, that the power brought against us is a bubble requiring nothing but one sharp prick, after which we may either retire, as from Afghanistan, when reconquered by Nott and Pollock; or by substituting a Viceroy for the native chief, gain for free black labour an immense and a peaceful field. The shell that strikes the King will unloose Ashantee. The true difficulty is transport, and this the Government is meeting by its traction-engines, which are stronger than elephants, and cost very little more; and the true danger, the marsh mist, which cannot be rapidly improved, but can be defeated, as it extends only for ninety miles, by adequate precautions, which should be dinned into the soldiers' ears morning, noon, and night during the voyage. Drink no unboiled water, wear flannel, never sleep on wet ground, and the Europeans of the column may reach Coomassie without losing a hundred men. We only wish, with Ifyder, they could be carried to the fight, but as that is impossible, we must trust to infinite precaution.—*Saturday Review*.

### Shipping Intelligence.

#### ARRIVALS.

Dec. 14, *Japan*, American steamer, Freeman, 3 836, from San Francisco, Mails and General, to P. M. S. S. Co.  
Dec. 16, *Menzaleh*, French steamer, Mourrut, 1,008, from Hongkong, Mails and General, to M. M. Co.  
Dec. 17, *Tartar*, British steamer, Ferries, 1,457, from Kobe and London, General, to Aug. Heard & Co.  
Dec. 19, *Golden Age*, American steamer, Coy, 1,870, from Shanghai and Ports, December 12th, General, to P. M. S. S. Co.  
Dec. 19, *Rio*, British barque Carr, 450, from Nagasaki, December 10th, Coal, to P. & O. Co.  
Dec. 20, *Colorado*, American steamer, Dearborn, 3,836, from Hongkong, December 12th, Mail's and General, to P. M. S. S. Co.  
Dec. 20, *Oregonian*, American steamer, Harris, 1,914 from Hakodate, December 17th, General, to P. M. S. S. Co.

#### DEPARTURES.

Dec. 14, *Sokol*, Russian gun-boat, Sedensuer, 500, for Kobe.  
Dec. 13, *Mikado*, German barque, Lempferdt, 340, for Shanghai, Coal, despatched by Van Oordt & Co.  
Dec. 13, *Relief*, American steamer, Corning, 795, for Hakodate, General, despatched by P. M. S. S. Co.  
Dec. 15, *Japan*, American steamer, Freeman, 3,836, for Hongkong, Mails and General, despatched by P. M. S. S. Co.  
Dec. 15, *Costa Rica*, American steamer, Williams, 1,917, for Shanghai, General, despatched by P. M. S. S. Co.  
Dec. 16, *Madras*, British steamer, Bernard, 1325, for Hongkong, Mails and General, despatched by P. & O. Co.  
Dec. 16, *Cleopatra*, British 3-masted schooner, Schultz, 190, for Chefoo, Ballast, despatched by Captain.  
Dec. 17, *Ceylon*, British barque, Leach, 395, for Hiogo, Ballast, despatched by Van Oordt & Co.  
Dec. 17, *Windhover*, British ship, Findlay, 846, for Kobo, General, despatched by Strachan & Thomas.  
Dec. 17, *Chow Fan*, British brig, Habekost, 289, for Amoy, Ballast, despatched by Kniffler & Co.

Dec. 20, *Golden State*, American ship, Berry, 944, for Shanghai—Native Produce, despatched by Smith, Archer & Co.

#### PASSENGERS.

Per American steamer *Japan*, from San Francisco, for Yokohama.—S Mendelson and sister, Mrs. J. M. Batchelder and son, Jno. L. Gamble, U.S.N., Dr. Vasconcellos, Chas. Glanville, M. C. Harris and wife, Dr. A. S. Ashmead and wife, T. Tachiyama, G. Nagarka, Susamiso Anniso, M. Komuro and wife, M. Komuro, M. Soto, T. Takuchi, Soma, Tsunisawa, N. M. Keda, K. Nakamura, M. Oudawa, and 7 in the steerage. For Shanghai—Francis Voisui, and 2 in the steerage. For Hongkong.—E. Sunderland, and 575 in the steerage.

Per American steamer *Costa Rica*, for Hiogo—Mr. Newcombe and wife, Messrs. A. Center, E. H. Hunter, C. H. Jubin, J. Pitman, and 6 Japanese, in the cabin; and 60 in the steerage. For Nagasaki.—4 Japanese in the cabin; and 25 in the steerage. For Shanghai.—Lord and Lady Inverurie, Maj. Rossall, Mr. Francis Voisin, Mr. A. Conil, Bishop Zanoli, Mr. G. H. Howell, 1 Japanese, in the cabin; and 5 in the steerage.

Per P. & O. steamer *Madras* for Hongkong:—Lieut. H. O. P. Wright, R.M., Mr. R. G. Watson, Miss Wilson, Wm. Halsey, J. W. Hall, and 10 Chinese.

Per French steamer *Menzaleh*, from Hongkong—Miss Woodman, Messrs. Reiff, Rouley, 3 Japanese, and 1 Chinese.

Per American steamer *Golden Age* from Shanghai and Ports.—Mr. Howard Church, J. M. Dance, Messrs. Woodruff, A. Andsen, E. Burmeister, H. Bust, and Miss Fielding, and 11 Japanese, and in steerage 3 Europeans, and 4 Chinese. For America.—Capt. Geo. E. Johnson and wife and child, J. de Cordova.

Per American steamer *Colorado*, from Hongkong. For Yokohama.—Mr. F. L. Pollard. For San Francisco.—Mr. H. Rubery, M. Lin, Capt. S. Doane, Messrs. F. T. Jenkins, Geo. Reimesuzden, and 135 Chinese, in the steerage.

#### CARGOES.

Per American steamer *Golden Age* from Shanghai and Ports.

Treasure, ..... 6,500.

Per American steamer *Colorado*, from Hongkong:—

Treasure ..... \$5,000

#### REPORTS.

The French steamer *Menzaleh* reports fine pleasant weather throughout the passage.

The British steamer *Tartar* has made the quickest passage from Kobe to this Port on record, having left that Port at 5.30 a.m. on the 16th, and arriving here at 9 a.m. the following morning.

## NOTICE.

THE ORIENTAL BANK CORPORATION are prepared to keep CURRENT ACCOUNTS, and receive FIXED DEPOSITS, in GOLD and SILVER YEN. Amounts received in Yen will be repayable in Yen.

For the Oriental Bank Corporation,

J. ROBERTSON,  
Agent.

Yokohama, December 19, 1873.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**Silk.**—Business has been much less active during the past week than it was during the week before, and the fall in prices for medium and inferior hanks may be estimated at \$20 under the quotations below.

Since the 5th inst., arrivals are 800 bales and settlements nearly as much.

**Silk-worms' Eggs.**—Total export to date is 1,400,000 cards. The next U. S. mail will probably take a few cases.

**Tea.**—Business for past week amounts to about piculs 2,400 mostly Medium and Fine Parcels; some amount of "Choice" has also been settled at rates averaging from \$51 to \$54 per picul. Supplies continue but moderate and stocks are rather diminished. With the departure of the *J. S. Stone*, we look forward to a quiet time until the New Year is well opened.

## EXPORTS.

## THE GREATEST WONDER OF MODERN TIMES!

### HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

### THE GREAT CURE ALL!

### HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kind. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

### THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

## KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

### KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all Chemists.

CAUTION.—The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

## Notes of the Week.

CHRISTMAS week has been devoted to such gaieties and festivities as properly become it, and no mere ordinary event inconsiderate enough to intrude itself under these circumstances has any claim to recognition. It is obvious that those holidays which are at least as essential to man as his working days are not to be intermitted for any claims made by obtrusive occurrences, which, had they been gifted with a becoming modesty, would have delayed their appearance until they could be welcomed with sincerity, and it is well to inform any congeries of intentions aspiring to form themselves into an event, that they cannot be presented, should they make claims to a place in history, unless their advent is unequivocally *cis* or *citra* of those Christian holidays which we should hold it a breach of the faith not to observe. It may possibly be well to say that no such occurrences have put in any such claim, and that, whether out of respect for the week or any such other cause as astrologers alone could penetrate, there has "not been a mouse stirring." Politics, in obedience to the behests of the season, have been respectful to the holidays, and the settlement itself has been abandoned to those pleasures which it would be indecorous to make the subject of public comment.

We shall hardly be out of order, however, in paying a respectful tribute to the ladies who undertook the decoration of Christ Church, and who discharged their self-imposed duty with a success which greatly contributed to the beautiful appearance presented by the building on Christmas Day. An abundance of evergreens and holly, or such berried substitute for it as the *flora* of Japan affords, was tastefully disposed throughout the Church in the many forms consecrated by custom as appropriate to ecclesiastical ornamentation, and illuminated texts from the Scriptures encircled the walls, and adorned such few arches as may be found in a building having but slight claim to be ranked under any order of ecclesiastical architecture. Nor should the congregation omit to acknowledge the assistance of a Choir whose efforts contributed greatly towards making the service of the day the most hearty and impressive within our recollection in this place. And we trust we may be pardoned here for expressing the hope that the Choir which assembled on Christmas Day will continue to contribute its aid towards the vast improvement of the service which it then effected. Our Church music has long left much to be desired, and as most of the Choir are regular attendants of the service, while some at least of those who were good enough to give their exceptional and valuable assistance on Thursday might easily be disposed to become so, no difficulty should be found in maintaining the Choir very nearly on the scale on which it was constituted on this occasion. Our Church affairs specially demand zeal and unity of effort at this moment. The grant from the English Government is about to be withdrawn, and all those interested in the maintenance of our Church establishment here are bound to make an effort within their respective spheres of action to support it. We should hold it as most unworthy to suggest any channel into which this effort might be directed inconsistent with the traditional sentiments and customs associated with our National Church. Far from desiring that any choir should supersede that congregational singing which is one of the most beautiful features of the ceremonial of the Reformed Church, we desire only that the Choir should lead and sup-

port it. But this we do earnestly desire to see; and we trust that the successful effort in this direction—if we may call it so without indecorum—made on Christmas Day, will be the beginning of a well-sustained endeavour to place our Church music on a footing creditable alike to the growth of our settlement and to those cultivated tastes which are daily becoming more abundant and visible in it. We see no bar to the entertainment of this hope. Our Choral Harmonists are reported to be making satisfactory progress in secular music, and there can be no reason why they should not dedicate a share of their efforts to a service which has claims on them such as we are convinced they will not lightly disregard.

THE Reading promised by Mr. Pauncefort last week took place in the Dining Hall of the Grand Hotel on Tuesday evening last. The pieces selected were Dickens's "Christmas Carol," as adapted by its author to this purpose, and one of Mark Twain's humorous sketches "The great Beef Contract."

Of the merit of the former work it is almost superfluous to speak. It has been read by every one, and its position as a work of art is established beyond the chance of contest or cavil. It abounds with all that rich, generous, overflowing nature possessed by its author, its humour is blended with a pathos of which he was so great a master, and the various scenes he delineates in it are wrought with a care to which they owe their high finish, but which was exercised without fettering his fancy or leaving any trace of toil behind it. No selection from Dickens could have been more appropriately made than that which treats with such consummate art of this kindly season, and seeks to banish from it those harsher traits of human nature which are out of harmony with the more generous emotions it inspires. It is well at this time to have the heart cheered by the fire which glows in overflowing natures, and which warms and irradiates those who approach it, banishing the meaner passions and levelling the baser proclivities of our nature, diffusing kindness of feeling, and radiating its heat with fervid and glowing power amongst those who can absorb, indeed, but cannot create it. The task which Mr. Pauncefort set himself, however, was an arduous one, and if he failed, as we somewhat think he did, in giving full effect to all the wonderful and beautiful scenes drawn by the author, he read them with an art and with an appreciation of the work which it would be very difficult to surpass, and of the extent of which no one unacquainted with the difficulties of the task can form any true conception. To our mind, however, Mr. Pauncefort betrayed a want of entirely accurate apprehension of the distinctive difference which exists and which must be maintained between the actor and the reader. The range of gesture, motion and impersonation permitted to the one is denied to the other by anything like fastidious criticism, and though both have very much in common, there are limits prescribed in one case which are not only unknown in the other but which would be fatal to its existence as an art. It is for the reader—as it seems to us—to let the passion, or description, or sentiment of the author do its own work, with as little adventitious assistance as possible from the interpreter. We do not mean by this to proscribe changes of voice and even of feature, which are perfectly legitimate in the reader, and admirable, indeed, essential instruments in his performances. The imagination of the listener may fairly be roused and stimulated by such means, and it would be manifestly absurd to insist on the preservation of the same tone of voice and expression of countenance in de-

living the harsh, cold and forbidding words of Scrooge and those which embody the joyous frankness of his nephew. But we apprehend that the permitted range of voice and gesture under such circumstances is far smaller than would be granted to or demanded by the actor, and that the art which the actor practises is radically different in this respect from that practised by the reader. We shall willingly grant the limitations imposed on the latter by this canon; but the conditions of his art impose them, and there is no getting behind and beyond this ultimate truth. The actor impersonates but one character; the reader may have to impersonate many; and as it is physically and intellectually impossible that each of these should become in his hands what it would be in the hands of the actor, resort must be had to other means of producing those effects which the author has in his mind and which it is the reader's office to reproduce. In other words, the impossibilities, as such, must be recognised and faced, and the reader must confine himself within limits imposed by the very conditions of his art, any attempt to transgress which can only be made at the peril of his overstepping its rightful landmarks. It follows from this, indeed, that much might be made interesting by an actor or a company of actors which would be wholly incompetent to arouse any interest even by the best possible reader, and how much this is the case may be inferred from the impression ordinarily made on the mind by the perusal of many of the lighter works of dramatic literature, which when produced on the stage, where each character has its own representative, are interesting enough and may even be delightful, but which would never bear public reading. And this is further proved by the selections made by public readers. They carefully avoid such works as those just referred to, however successful they may have been on the stage, but choose rather works which depend for their charm and effect upon the literary, dramatic or descriptive power of a great writer. And hence the correctness of the canon that we have laid down, that the sentiment or passion or description must do its own work without prop or bolstering of any kind. Gestures or attitudes, gesticulations or simulative motions which would be correct in one case, are misplaced in the other, and cannot be resorted to without a transgression of rules imposed by the art of reading as an art. These rules do not forbid the change of the features, or quench the fire of the eye, or prohibit a change of voice. But they undoubtedly forbid attitude and action which is exclusively that of the actor, and no sound theory of the art of reading can do otherwise than forbid them.

In making these remarks we have done so not because Mr. Panncefort failed, but because he succeeded, in giving us a very pleasant and instructive evening. Had he been a poor or even an indifferent reader, we should have said very little about him or his performance. It is because he is a very excellent artist possessing advantages, both physical and intellectual, of a very undeniable order, that we have been at the pains to criticize his entertainment and the views by which, as an artist, we presume he is animated. We must frankly confess that the "Christmas Carol" means to us much more than it ever meant before, and this we owe entirely to Mr. Panncefort. Whether we are right or wrong in our theory matters but little, for the fountain-head of art certainly lies on the other side of the world, not here, and when the views and manner of an artist are formed, nothing would be more dangerous than any attempt on his part to change the direction of their current. Not the less, however, does it seem to us a duty to propound what appear to be correct views of the art which Mr. Panncefort professes, and we shall be very pleased if those who have an interest in the question at issue would take any future opportunity he may afford them to contrast our theory with his own very excellent practice.

In the piece of Mark Twain's which succeeded the "Christmas Carol" Mr. Panncefort, to our mind, succeeded admirably. It is extremely clever as an example of the driest American humour, and was delivered with an appropriateness of tone and accent never for a moment descending to vulgarity or even caricature, and belonging to a school of humour which is carving for itself a well-defined place in art. The temptation to an artist of a lower order than Mr. Panncefort would have been to exaggerate these, in doing which he might have become

both vulgar and offensive. But he steered clear of both dangers, apparently entirely without effort, and showed how well he apprehended the merits and characteristics of the school he was illustrating.

We observe that Mr. Panncefort promises another entertainment on Tuesday next, and we hope those whom the pressure of last Tuesday's mail prevented from hearing him, will take the opportunity of his second Reading to test our views of his merits. We are anxious that the horizon of our entertainments here should be far more extended than it has hitherto been, and our only chance of securing the visits of artists whose performances have any intelligible claim on our recognition, is to support those who have made good their title to this distinction, and this Mr. Panncefort has unquestionably done.

It is now above a year since we sought to draw the attention of the Government to the great importance of taking such measures in regard to the forests of the country as would ensure a large and continuous supply of well-seasoned timber for the service of the Public Works Department. Abounding as the country does in wood of the finest descriptions, there should be no difficulty in securing and maintaining this supply. But the question has been greatly neglected since the Revolution, and our readers may recall a recent letter in our columns from M. Brunat calling attention to the indiscriminate cutting of timber which was going on in the district from which he wrote. Of the slaughter of the giants on the Tokaido the memory is green in the minds of all, and the great carcasses which lie on this high-road, or the huge stumps which mark the spots where for centuries the trees stood as sentinels, cause the traveller regrets in his journeys through this fair country which its charming scenery cannot altogether dissipate.

And now, the want of good and well seasoned timber, and the difficulty in some cases of getting it, as we have heard, have been for a long time serious hindrances to the progress of the Railway Works. The loss occasioned thereby is both direct and indirect, inasmuch as a bad article which will not last has to be made use of, and delay in waiting for it means delay in opening of works in progress.

That Japan, that Yezo itself, has within its limits timber of any kind, almost, that could be required in this country, is well known. That there is sufficient timber to support a considerable foreign trade is almost equally certain, and yet there appears to be a listlessness and neglect of the matter on the part of Government which is much to be deplored. A Woods and Forests branch of the Public Works Department would be of the highest service in regulating the preservation, the due cutting, and the renewal of wooded districts. In Europe, and in the East, in England, France, Germany, and in India, the respective Governments have been compelled by an experience which it behoves Japan to profit by, to give their earnest attention to the subject. We have even heard it rumoured that so great is the want of well seasoned timber available for Public Works in progress in Japan, that it is contemplated for a time, at least, to import such supplies as may be necessary from the United States.

THE closing of the Bridge which leads from Water Street over the Creek towards the Legation Bluff is a source of the greatest inconvenience to the residents generally, and every effort should be made by the local authorities to have the repairs completed with the smallest possible delay. Yesterday in the best part of the afternoon two men were at work upon the Bridge, and we presume that if the late fine weather breaks up the works will be stopped altogether. This, however, will be absurd. They should be pushed on with all speed, and even carried on at night by relays of men, as is done under emergencies in every other part of the world. Meanwhile a ferry for foot passengers should be established at a small charge which would willingly be paid by those who are in the habit of using the bridge, and on whom the closing of it involves great inconvenience and loss of time.

WE are compelled to defer our notice of the third Journal of the Deutsche Gesellschaft für Natur und Völkerkunde Ostasiens, just issued, until next week.

THE Minutes of the last meeting of the Asiatic Society had not reached us when we went to press.

The meeting was held on Monday last.

HIGH MASS was performed at the Roman Catholic Chapel in Main Street at midnight on Christmas Eve.

THERE is excellent reason for believing that the detachment of French troops stationed here will be withdrawn very shortly.

THE M. M. Co. steamer *Volga* with the mails for Europe left Hongkong for Yokohama Monday the 22nd inst., p.m.

THE meeting of the seat-renters of Christ Church called for yesterday stands adjourned until Tuesday the 30th at 2 p.m.

CAPT. LANE, the Agent of the P. M. S. S. Co. at this port, has received a telegram informing him that the company will not dispatch any steamer from San Francisco for this port on the 16th Dec. After the departure of the *Colorado*, there will not be any steamer for San Francisco until the 23rd proximo.

#### THE LIGHTHOUSES.

THE development of the Lighthouse system of the Japanese Government, though not progressing with that rapidity which at first characterized it, is still proceeding at a rate which, we may say, is almost unprecedented in the history of Lighthouses. Twenty-six lights are now shewn from the coasts of Japan, and these have all been established during the last five years. To what extent the Government, in the present state of the country, is justified in further prosecuting this work is a question which, we are of opinion, should have the serious consideration of those in authority. It is now much in advance of any other work of improvement undertaken by the Government, while the pecuniary return derived from it is at present nothing, and the actual benefits to the country are of an un-tangible and distant character, though none the less real. The energy and funds at the disposal of the Public Works Department might, therefore, be more suitably directed towards an equalization of progress in the different improvements wanted in the country, rather than to an undue prosecution of the work of establishing Lighthouses. There is no want of paths into which the resources of the Government might most profitably be directed. The vast mineral resources of the country are still undeveloped, and little or nothing, so far as we can discover, has been done towards this end. The means of internal communication are still unformed, and however the question of making Railways may be decided hereafter, there can be no doubt of the urgent and pressing necessity for the construction of decent roads throughout the whole country. When we say that the English Hatoba in Yokohama is the most dignified and formidable attempt at the construction of an artificial pier or harbour to be seen in Japan, we give the means of forming an excellent conception of what still remains to be done in this way. The recent conflagrations in Yedo teach the country a severe lesson regarding the necessity for a reform in the system of house building. And the destruction of property caused by the want of attention given to the large rivers calls loudly for some energetic action in that direction. There can be no question that improvements of this nature would be the means of assisting Japan on in her path of progress to a far greater extent than a further prosecution of the Lighthouse system. By certain treaty stipulations entered into with Foreign powers, the Government was bound to erect certain Lighthouses, but we imagine that the Foreign Representatives will all agree that these have long since been completed and that the Government is now free from all such obligations. Those additional Lighthouses which have been established were carried out by the Government on their own decision and perfectly spontaneously, and these have to a great extent been built on points which, in the opinion of various nautical authorities, are most required for the accommodation of Foreign traffic. For the present traffic between the open ports the existing lighthouses should be deemed sufficient. Various other points, no doubt, still requires illumination to render the system perfect, but the limited number of foreign vessels trading on the coast hardly warrants the erection of a lighthouse on a point which merely is prominent and not specially dangerous. A description of the system as it exists at present may be of interest to our readers.

There are in all 26 Lights established, 3 Beacons and 8 Buoys. Besides these, seven lighthouses are now in course of construction and will be completed in the course of a few months. Of these 33 lights, seven are in the Gulf of Yedo; four are between it and Hako-

date; seven are between it and the Kii Channel; three are between Isumi, Hiogo and Osaka; six are in the Inland Sea and Shimonoseki; two are between Shimonoseki and Nagasaki; one is at Nagasaki; one is at Satonomisaki or Cape Chichakoff, and two are on the eastern extreme of Yezo. The three Beacons are in Shimonoseki Straits. Five of the Buoys are in the Gulf of Yedo and three are in Shimonoseki Straits. The manner in which the Lighthouses have been constructed has already been very fully described in these columns and we have little further to add now. Brick has entered rather largely into the field as a material for building. Two Lighthouses each about 90 feet high are now being thus constructed.

The dread of earthquakes which led Messrs. STEVENSON, the consulting Engineers to the Department, to adopt reflectors instead of the more perfect dioptric apparatus, has been considered to have been based on false grounds, and for the later lights glass apparatus have been ordered. These require much less care and attention than reflectors and give a considerably more powerful light.

A very important improvement has also been adopted, namely, the conversion of the various lamps to burn mineral instead of vegetable oil. The advantages of this are,—1st, a light equal in intensity to twice the light given by the ordinary oil used;—2nd, a saving of nearly one half in the cost of oil; and 3rd, a flame which requires little or no attention or trimming during the night.

Although most of the lighthouses are still in charge of European lightkeepers a five years training has been effectual in making a few efficient Japanese, and these are now in charge of the smaller lighthouses. To what extent they can be depended on to carry out the irksome and all important duties of a lightkeeper is still a matter to which considerable doubt is attached. They are quite competent to perform the manual duties of the position, but the difficulty is to make them appreciate its responsibilities and to keep them up to the strict regulations which are necessary in a well conducted lighthouse service.

The work in the office at Yokohama is conducted by a Commissioner appointed by the Kobusho and a staff of Japanese officials, the Europeans being one Chief and two Assistant Engineers, one Secretary and one Clerk. The other Europeans employed by the department are 17 Lightkeepers and 4 artisans—as also the officers of the steamship *Thabor*. This vessel still acts as tender to the lighthouses.

The establishment in Yokohama has been greatly extended within the last year or so. A large extent of ground has been reclaimed from the sea, and store rooms, machine shops, &c. have been built on it. A brick lighthouse has also been erected which is intended for the purpose of trying new lamps or apparatus in, before sending them down the coast. Young men willing to become lightkeepers will also be trained in it for about three months before being sent to any station, so that their suitability may be, in some measure, tested before they are enrolled in the service.

A good deal still requires to be done towards the organization of the department, and this is an additional reason why more lighthouses should not be crowded upon it, until it has had breathing time to re-arrange the methods of maintaining those already established.

A question must force itself upon everyone who takes an interest in this subject, and that is, whether it would not be equitable and just to allow the Japanese Government to collect from those vessels who derive benefit from the Lights such an amount of dues as would

to some extent remunerate them for the expense which they have been put to. The coming revision of the treaties may probably decide this point, when the efficiency of the service will probably be enquired into. European superintendence will no doubt be a *sine qua non* by the Ministers.

So far as it has gone there has never yet been brought to the notice of the Department a failure in any of the lights, and their usefulness is generally favourably commented on.

The work is one which it is due to the Japanese Government to say they undertook with great alacrity and for which they deserve our congratulations in having carried it on so far successfully.

### CONSTRUCTIVE ART IN JAPAN.

By R. HENRY BRUNTON, Esq., F.R.G.S., F.G.S.

*Read before the Asiatic Society of Japan,  
on the 22nd December, 1873.*

THE accounts of Japan which at the present time are generally spread throughout Europe, are so exaggerated, that both the natural beauties and wealth of the country as well as its genuine condition and the progress which it has made, are greatly over-estimated by those who have not had an opportunity of visiting the country and of judging of them for themselves. Every one, therefore, who comes to Japan is led to expect too much, and there are few who on arrival do not experience feelings of disappointment. And it is probable that nothing develops these feelings more fully than the absence of those artificial improvements which are generally met with in all civilised countries. The dwellings of the people are of mean appearance, and are generally without ornament or adornment of any kind. They are built in a temporary and unsubstantial manner, and are to a great extent wanting in the comforts which are ordinary in all European houses. The streets in the principal towns, as well as the country roads, are rutted, uneven and perfectly untended; and although gravel is sometimes used, the roads are generally merely formed of the earth or clay through which they pass. There is almost an entire absence of drainage and the refuse water from the houses is allowed to spread itself over the streets. The rain water has no means of egress, and lies in pools until it has time to sink into the earth or is evaporated.

It is further impossible to repress a feeling of disappointment when we turn to the religious monuments of the country. The temples are stately, they are generally exquisitely ornamented, and are certainly built in a more stable and substantial manner than the other erections around them. But there is so great a sameness about them that it seems as if the original designer had made a groove so deep that all the intellectual power of the Japanese could not raise their architects out of it.

That earthquakes are prevalent throughout the whole of Japan is a fact which, in the minds of many, has affected the whole system of building in Japan, and has prevented the development of the native talent for construction. This is looked upon as sufficient reason for the absence of stone erections or buildings of solidity and durability. But if earthquakes have exercised this influence over the Japanese mind, the people have been influenced by false premises; as I think that to imagine that slight buildings, such as are seen here, are the best calculated to withstand an earthquake shock is an error of most palpable kind. Now that foreigners have introduced a different system of building the present Japanese have no hesitation in adopting it, and edifices of any size or material are now erected with their approval. No objection is ever made on account of earthquakes, and on these grounds I am of opinion that at all events the present race have not that dread of earthquakes which would lead them to eschew solid constructions, and we must seek at some other source the reasons for the want of progress in the art of building.

The whole country is subject to earthquakes, and there is hardly an island or a province of Japan that has not at some time or other suffered from their effects.

Through the courtesy of certain Japanese officials I have been put in possession of some information, which I have every reason to believe to be correct, regarding the destructive earthquakes which have occurred. From this I gather that the country is becoming more and more liable to them and that they have steadily increased in number during the last few centuries. Thus there was but one destructive earthquake in the 5th century, which happened in the year 415; none other is known to have occurred till the 9th century; one more occurred in the 10th century, another in the 13th, 2 in the 16th, 19 in the 17th, 13 in the 18th and 15 in what has already passed of the 19th century. The average of this century therefore has been one destructive earthquake in every 5 years, while 300 years ago there was but one in 50 years. The following is a list of the most destructive which have occurred throughout the country.

In the 5th year of the reign of the 20th Emperor—in the year 415.

A destructive earthquake happened in the year 1021. Another in the year 937 and another in the year 1292, and one felt worst at Kamakura.

One felt worst at Tsuruga and Totomi in the year 1588.

One which destroyed many houses and took many lives at Kioto and Fushimi in the year 1595.

One at Yedo which destroyed the Castle and many Daimios' residences in the year 1647.

Another at Yedo which knocked down many houses and killed a great number of people in the year 1649.

One in the province of Igo which brought down the retaining walls of the Castle of Matsi-yama and destroyed many houses in Uwadjima in the year 1649.

One severely felt throughout the 8 provinces surrounding Yedo in the year 1650.

One which partially destroyed the Castle of the Mikado at Kioto and ruined the castle of Nijo in the year 1661.

One felt in the province of Echigo in the year 1661.

One felt in the Island of Yezo in the year 1662.

One which again partially destroyed the castle of Nijo near Kioto when the shocks lasted for 8 hours in the year 1662.

One felt at Niko in the year 1682.

One felt at Diwa in the year 1693.

One felt throughout the 8 provinces surrounding Yedo. Walls of outside and inside moats of Castle of Yedo destroyed. Felt very severely at Odawarra where many houses were destroyed and numbers of people killed. Tidal waves also broke along the coast at the same time and caused enormous destruction. The road leading through the Hakoné pass was closed up by the alteration in the surface of the earth in the year 1702.

One severely felt in Yedo in the year 1715.

One felt throughout the 15 provinces surrounding Kioto—when many parts of the earth opened up—and enormous tidal waves occurred in the year 1716.

One felt severely in the neighbourhood of Fusi-yama. At this time which was on the 22nd of the 11th month, fire burst from a place called Moto hashiri kuchi at the base of Fusi-yama—there was a fearful noise like thunder, and a black gritty sand was thrown into the air which caused darkness to come over the whole surrounding country. Even in Yedo lanterns were used in day time. During the night of the 22nd this continued, but on the morning of the 23rd the sky was seen. On the 25th darkness again came on, black sand fell like rain and it only cleared up again on the 28th. A small mountain rose up on the side of Fusi-yama at this time which has been called Ho-yae-san from the year in which the occurrence took place which was in the year 1716.

One felt at Nagasaki when there were more than 80 shocks in one day and night in the year 1725.

One felt in the province of Echigo which occurred during a heavy storm of wind and rain. The Earth is said to have opened up and belched forth water so that the plains were like rivers, and men, horses, cattle and all animals in the neighbourhood were drowned in the year 1726.

One felt at Kioto in the year 1750.

One felt in the province of Echigo when the earth trembled 30 times in 10 hours, a hill was cracked, the earth opened and 16,300 lives were lost in the year 1750.

One felt at Awomori when the falling houses took fire

and caused the death of a great many people in the year 1765.

One felt in Yedo in the year 1770.

One felt in Yedo during the same year 1770.

One felt in Yedo in the year 1782.

Frequent severe earthquakes in Yedo in the year 1789.

One felt at Diwa when both the hills and the plains were cracked and the earth opened up in the year 1803.

One felt in the Island of Sado when there were constant shocks for 19 days from the 1st of the 1st month to the 18th of the 6th month in the year 1809.

One felt in the vicinity of Yedo, but worst at Kanagawa and Hodongaya, where many houses were destroyed in the year 1811.

One felt in the district of Kioto in the year 1818.

One felt in Oshiu in Yezo when the earth shook more than 150 times in the year 1821.

Frequent severe earthquakes at Yedo in spring time in the year 1824.

Frequent severe earthquakes at Yedo in autumn of same year 1824.

One felt in the province of Echigo in the year 1827.

One felt at Kioto when the Mikado's residence, many of the temples and the Castle of Niji were destroyed. The earthquakes commenced on the 2nd of the 7th month, they partially discontinued on the 20th of the 8th month, but were not entirely quiet until the following year in the year 1829.

One felt in the vicinity of Fusi-yama in the year 1838.

One felt in Sendai when the castle was destroyed and great destruction was caused by tidal waves in the year 1833.

One felt in the province of Shimano which destroyed many temples and houses numbering in all about 5,000—700 people were killed and 1,460 wounded. The earth opened and swallowed 16 houses—in the year 1846.

One felt at Kioto and Osaka—in the year 1851.

Frequent earthquakes throughout the 8 provinces surrounding Yedo, which were also felt at Kioto and in the Islands of Sikok and Kiusiu. The earth was not quiet for one year—in the year 1854.

The most recent which has happened was most severely felt at Yedo, where the trembling of the earth continued for one month and gave 80 severe shocks. Many houses were knocked down, their timbers took fire and conflagrations commenced at 45 different places. About 120,000 lives were supposed to have been lost. This occurred in the year 1855.

Those parts of Japan most subject to earthquakes are, strange to say, the vicinities of the two capitals. Thus out of the 42 severe earthquakes which have taken place during the last 600 years, 9 have occurred at Kioto and 13 at Yedo. The province of Echigo is next in numbers and has had four earthquakes. Yedo has been visited twice, as also Diwa and the neighbourhood of Fusi-yama—while Nagasaki, Sado, Sendai, &c. have only suffered from one disturbance.

But, while the country, as is abundantly shewn above, is liable to very severe and an increasing number of earthquakes, the system of construction in the buildings has not been well devised to withstand such visitations. The more solidity and weight in a building and the greater its inertia, the less liable it is to derangement from a sudden movement of its foundations; but at the same time it is essential that the strength and connection of the materials in the walls are proportionate to their weight and mass. As a general principle preference should be given both on account of durability and stability to the adhesion of bricks or stone and mortar in a solid well built wall, over ordinary wooden buildings. It might be that a wooden erection could be constructed with its frame work so tied and braced together as to render it almost perfectly secure against any earthquake, short of an upheaval or breach in the surface of the earth; but this would be an expensive, thriftless and impracticable style of construction. Whereas on the other hand, a stone erection need not be more than ordinarily massive to make it capable of resisting any shock not of extraordinary violence. But in stone houses it is absolutely necessary that the masonry should be executed in a proper manner, the great point to which attention must be given being that a perfect bond is maintained throughout the entire

building. Mr. Mallet in his history of the Neapolitan earthquake of 1857 gives many proofs of the truth of this. He says—"When the masonry consisted of round lumpy quadrated ovoids of soft limestone, the whole dislocation occurred through the enormously thick ill-filled mortar joints and almost all buildings thus formed fell together in the first movement in indistinguishable ruin"—"Where the masonry was of the best class, and such as would be so recognized in England, the buildings thus constructed stood uninjured in the midst of chaotic ruin. Some examples of this will be found in the second part, none more striking than the Campanile of Atena, a square tower of 90 feet in height and 22 feet square at the base, in which there was not even a fissure while all around nearly was prostrate." "Indeed it was evident that had the towns generally been substantially and well built or rather the materials scientifically put together, very few buildings would have actually been shaken down even in those localities where the shocks were most violent. Thus the frightful loss of life and limb were as much to be attributed to the ignorance and imperfection displayed in the domestic architecture of the people, as to the unhappy natural condition of their country as regards earthquakes." A very striking example of the advantage of solid construction over lightness and want of strength was seen not many years ago at Manila, when an earthquake levelled almost the entire town and left the Stone Lighthouse at the harbour, which is a column of masonry of great height, standing by itself perfectly unharmed. From the vast and handsome edifices which may be seen in most countries in Europe liable to earthquakes, we may conclude that their inhabitants have acknowledged the correctness of this principle, and it cannot therefore be urged on sound grounds that it is owing to the liability of Japan to earthquakes that its people have never desired or made an effort to build other than wooden houses or to make these of any but of the most flimsy description.

The general poverty of the people and their extremely simple habits may account for the simplicity of their dwellings, and as their habits become more refined and luxurious it is very probable that the internal comforts of their houses will also improve. Six hundred years ago the dwellings of the English were constructed in the roughest manner of wood and clay. The inmates ate and slept in one room and privacy was perfectly unknown. In the beginning of the 15th century the houses began to be divided into rooms and private apartments. Shortly afterwards glass windows and chimneys were introduced, and stone buildings were erected the ruins of some of which are in existence at the present day. Gradually improvements were one by one effected, until the modern English residence was produced.

At present in Japanese houses there is a want of privacy, for although there are apartments, they are only separated from one another by paper partitions which accomplish their purpose only in name. There are no healthy or safe means of artificially heating the houses, and chimneys have never been adopted. There is an entire absence of glazing, and the light finds its way into the houses through the paper windows. These paper windows generally compose a great part of the walls of the houses,—and as they are very slightly made and do not shut closely up the houses are extremely cold and unhealthy in winter. During six months of the year in the greater part of Japan the weather is such as to require properly shut up houses with good fires, and although during the other six months considerable heat prevails, it cannot be said that the style of building is at all suitable for the climate of the country.

The construction of the houses is of an extremely fragile and temporary nature. The structures consist of wooden uprights resting generally on rough round stones. These support the roof, the main beams of which are formed of very large timbers put in their place in their natural state, and without being squared or cleaned. The covering to the roof consists either of thatch of tiles or of shingles alone and in putting these on the workmen are very expert. There are no diagonal struts between the uprights in the frame of the house, and no other means adapted to strengthen or stiffen it. The roof trusses are formed of one square frame built on top of another of a larger size until the apex is reached.

Thus, with its unnecessarily heavy roof and weak framework, it is a structure of all others the worst adapted to withstand a heavy earthquake shock. I should not forget to mention the fire-proof stores of the Japanese. These are buildings with a wooden framework of a better description, which is covered with sometimes as many as 50 coats of mud plaster, but generally with not more than 25 coats. They sometimes have a plaster roof and sometimes an ordinary tile roof. The plaster is of a thickness of from 1 to 2 feet, and the doors and window shutters are frames of wood covered with plaster in the same way. These stores, as is well known, have been found remarkably efficient in resisting fire.

On account of the simplicity of their construction and general similarity very little can be said regarding the temples of Japan in a paper such as this, which is devoted merely to a description of the art of building. The manner of their ornamentation and a history of their contents would form the subject for a separate and a very interesting paper. The foundations consist generally of square stones on which the uprights rest. These are of Kiaké and are connected together at various intervals by longitudinal waling pieces. The roof is formed in a similar manner to the ordinary dwelling house roofs, but the wood in the beams is generally of Kiaké and of great size. The roofs are generally thatched with the bark of the Shenoké tree, or with a grass named Kai-a which is put on to a thickness of, at times, three feet. In some instances they are covered with sheet copper, and in the case of the smaller temples, tiles are often used. The casing of the walls is thick Kiaké planking on the outside and sometimes thinner Shenoké planks as a lining on the inside. The outside is generally ornamented by panels of carved work illustrative of some legend or romance of the religion to which the temple was dedicated. The projecting ends of the beams of the roof have often some fantastic device carved on them, and are sometimes merely covered with copper to protect them from the effects of the weather. The joints of the various beams are also covered with copper. The timbers used in the structure are joined together by mortices, scarfs or dovetails in such a way that metal fixings are seldom required and, with the exception of a few small nails, are but little used. But there is the same want of diagonal struts or ties in the framework of the temples as in the framework of the dwelling houses, and while the execution of the practical carpentry is generally excellent and the wood always of the best description, the manner of their construction is in this respect decidedly faulty. There are many temples in Japan from 200 to 300 years old, such as Shiba in Yedo which is 270 years old, and the wood used in them is still fresh and sound. A very fine modern specimen exists at Naruto about 30 miles to the North East of Yedo which is much thought of, and which was only built 18 years ago, but neither do the principles nor the details of its construction differ in any way from the ordinary specimens.

In some branches of carpentry the Japanese are very expert, and as their buildings are almost entirely of wood the concentrated energy of the people seems to have been devoted to this branch of building. The neatness of their work is very noticeable, the joints of the timbers are made with the greatest nicety, and as paint is never used, these are exposed, and are so made an object of especial care. The frames of their paper windows are generally models of delicate workmanship and the carved ornamentation in their houses or temples is generally beautifully executed. But when we come to the higher branches of carpentry, such as the arrangement of various beams so that they will be best adapted to bear the strains which are likely to come upon them, or a combination of timbers which will form a stiff, strong and reliable structure, or the selection of the proper size of wood to stand the different strains which it will have to bear, then we find the Japanese very deficient. The carpenters do not seem to have any appreciation of the disposition of strains in any framework, and where enormous timbers are placed they may be found resting on and sustained by beams not one quarter the size they should be. In their bridges the same incongruities may be observed; thus beams, which if properly fastened would form a tie and be a great support to the structure, may be ob-

served secured in their places by wooden keys about one inch square which are not much stronger than a match. The workmen, however, are very skilful in the use of their tools. They only require explicit and detailed directions and they are then competent to execute any work in a very creditable manner. The woods generally used for building purposes in the southern parts of the country are not very varied. There is a great variety of very excellent woods in the island of Yezo, but these have not yet been introduced in to this part of Japan. Kiaké is the commonest hard wood and is, generally speaking, a very serviceable timber. If cut when ripe, and at the proper season, the good qualities will last for centuries, proof of which is shewn in the older temples in the country, but there are great varieties of quality and it requires a very practised eye to pick out the good from the bad. The exigencies of the people are such that, in the absence of any regulations to the contrary, they do not hesitate to cut the wood at all seasons, or when they receive an order for it. Wood full of sap is therefore as common in the market as seasoned wood, and perhaps it is not until after some years that the quality of timber purchased is made evident by the decomposed sap oozing out of it like a black tarry liquid. The fibres of the wood very soon after this occurs become rotten and the whole timber useless. Shenoké is the favorite soft wood of the Japanese, and is chiefly prized on account of the beauty of its grain and colour. It is also thought to be very lasting and is always used in erections which are intended to be durable. Sungi is a kind of cedar and grows in large quantities throughout the whole of Japan. There are many qualities of Sungi, the best being almost as good in appearance as Shinoké: it is however much cheaper. Sungi is principally used in the dwelling houses of the people which are only desired to be of all ordinary description. A cheaper wood which is used for more temporary erections is Matsu, a sort of Pine. This wood is also used in bridges as being a long fibred wood; it bears a considerable transverse strain, but it is by no means a durable wood. Kuri or horse chestnut is a very hard wood which does not grow to any size and is principally used for piles below water. A wood very much resembling ash, named Kashi, is used for boats, oars, handles of implements, &c. Hiba is very lasting under water, and is also used for piles. Tsuga is a kind of Shenoké but of very good quality. Momi is a cheap wood something resembling Matsu and used for the same purposes.

There are various other woods grown in this part of Japan, but the above are those most commonly used for building purposes.

The following are the names of the Woods grown in the Island of Yezo—thirty-four in number, specimens of which I have received and I have now the pleasure of presenting them to the Society. Sakura or common cherry tree, Shiki Sakura, a kind of cherry tree which is said to blossom in all seasons, Yanangi or Willow, Kana Sungi or Cedar, Kuwa or Mulberry tree, Ni-nga-noki or Mulberry tree, Momi or Pine, Kurumi or Walnut; Yezo-matz or Juniper, Kuri or Chestnut, Katsura a sort of vine, Mom-i-ji or Maple, Kashiwa or Oak, Sugunara another kind of Oak, Ishi nara another kind of Oak, Hannoki or Alder, Hachigo Hannoki another kind of Alder, Shuro a Palmtree, Hanoki, Yenju Midzuki, Ouko, Aburangi, Sosen, Kisen Sani-chi-tamo, Aka-tamo, Nana kamado, Asada, Shiuku, Itaya, Gambi, Doro, Shina.

The art of building in stone, or of brickmaking, or an appreciation of the properties of lime has been very much neglected by the Japanese. Perhaps it would be too much to expect that the genius of the ancient Romans, to whom civilization is indebted for its present knowledge of building operations, should find its counterpart in Japan. Still if we consider that this country lays claim to a history of upwards of two thousand years, during the whole of which time it has been inhabited by the same intelligent race which at present occupy it, and if we compare the evidences of constructive ability to be seen in Japan with what may be seen in almost any other part of the civilized world, it is impossible to resist the conclusion that the subject has never received that attention to which it is justly entitled, and that in consequence there has been an utter want of progress in Japan in the art of building. The liability of the country to periodical

and violent earthquake disturbances may possibly have had an influence in deterring the people from the use of stone, but, if so, as I have already explained, I think it has been founded on false grounds.

The country is extremely well supplied with stone. Few districts of any extent are without it and even with the native means of conveyance stone might be procured in almost any town in Japan at a moderate price, if the methods employed in quarrying it were more perfect. Along the whole course of the Inland Sea the formation is igneous and granitic and the stone of excellent quality. Many of the mountain ranges throughout the country are also composed of granite and excellent quarries exist at Mount Sekuba which is not more than 100 miles distant from Yedo and to which there is inland water communication the whole way. The other stones fit for building purposes consist principally of hard unstratified clay stones and stones of volcanic formation. These are found in various localities and especially at many points on the sea coast. There is a soft sandstone largely used in the neighbourhood of Yokohama, brought from the Provinces of Sagami and Boshu, which is evidently quite a recent formation and unfit for any building intended to be lasting. There is also a stone of white appearance much employed, but it is of little use except for the very questionable expedient adopted by foreigners here which makes it take the place of tiles and plaster as the outside casing for the walls of their wooden houses. The only really serviceable stones at present used in this neighbourhood are got from Idzu about 80 miles distant.

The stone erections which have been executed in Japan are very unimportant. On my making enquiries whether there were any stone houses in Yedo I was informed that the only one was a house built 100 years ago by Nakagawa then Governor of Osaka. It is constructed of granite brought from the neighbourhood of Osaka, but as it is only 12 feet by 9 feet and 10 feet high it is not a very imposing erection.

If we go back as far as the period of the Pelasgi architecture which dates from 30 centuries ago when the Pelasgi erected throughout Asia Minor and the whole south of Europe those wonderful specimens of their constructive skill which still exist, and if we compare their system of masonry with what may be seen in Japan at the present day, we can appreciate the want of progress made in this country. The walls of the Pelasgi erections were formed of stones of immense size put together without mortar. The stones when taken from the quarries were cut into irregular polygons and placed together in such a manner as to make the different faces of the geometrical figures which they employed coincide. This system of building resembles very closely what is to be seen at the castle of Osaka, or at the moats and gateways of the Castle of Yedo. But while the Pelasgi themselves gradually improved and adopted the use of square stones laid on a flat bed, while in later years the ancient Romans gave a further impetus to the science and have left such specimens of their skill and knowledge of the properties of materials as their aqueducts and great roads, the Japanese have not moved, they still employ the same crude systems of building in stone, and are still ignorant of the most rudimentary principles of this branch of construction art. The old Roman arch which marks an era in the history of building has no place in Japan. There certainly exist at Nagasaki, Kagosima and in other places in the south, several specimens of semicircular stone arches, but these were introduced by the Dutch residents and have never been largely adopted. In this also the Japanese have shewn a great want of appreciation of the art of building, and are behind their neighbours, the Chinese, in whose country I understand miles of stone arches may be seen, some of which are of almost incredibly large span.

Such stone work as is executed in Japan is put together perfectly dry, and it is an extraordinary circumstance connected with this subject that the people appear to be quite ignorant of the cementing properties of lime or of the use of lime mortar.

The use of mortar dates from the period of the invention of the Roman Arch some centuries before Christ, and was commonly used by the Romans of those days; but even up to the present day after some years of education

by foreigners Japanese workmen will persist in laying stones on top of one another without any substance between them to fill up irregularities or to cement one to the other. Solidity in their masonry is not considered necessary and the beds or joints of stones are not made flat or even. The spaces between them are therefore large and are generally filled with pebbles which are all that keep the stones in their proper places. Not being acquainted with the use of common mortar it is unnecessary to say that they are also ignorant of the value of hydraulic mortar. The Romans also taught us a lesson in regard to this which I am astonished to say has not been followed even by ourselves to the extent which it might have. They mixed the lime with Puzzolana or volcanic sand which gave it the peculiar property of hardening under water; this mixed with certain proportions of gravel formed concrete which, being thrown into the sea between moulds, in a short space became a solid and hard wall. Various moles or piers exist executed by the ancient Romans in this way. In England where volcanic sand cannot be had, it has been discovered that a mixture of certain clays with lime has a similar and more perfect effect, and the mixtures so made are known as Portland or Roman Cement. In Japan large quantities of Puzzolana exist, and lime stone is also found in various localities, but I can learn of no instances where the mixture of the two was ever attempted. The principle of hydraulic cement is, however, known to the Japanese, and a substance which is formed by a mixture of lime and clay is often used by gardeners as a lining for fish ponds, and for other purposes, but the process of mixture is either defective or the materials used are not good, because although the cement hardens under water to some extent, it does not harden sufficiently and it further cracks and falls to pieces when exposed to frost. Though acquainted with the principle therefore the Japanese seem to have been unable to bring it to any practical result. A lime plaster is made which is tolerably efficient, and is formed by mixing lime with boiled seaweed. But in plastering a house the first coat consists of mud generally from the bottom of some sluggish stream, the second coat of the same substance this time mixed with sand presumably to harden it, and the lime plaster is then put on as the third coat, but so extremely thin that it is merely a veneer to the mud below it.

A curious system of building retaining walls, sea walls, or the face walls for any embankment or cutting, is so general throughout Japan that one is almost led to believe that the people had discovered some peculiar merit in it, although it is patently in contradiction to all our received notions of masonry. It consists of placing stones on one another which on their faces are square or nearly so but which are pyramidal in shape, and come to a point at their back. They rest at their faces on the thin ledge at the front of the stone and are supported at their backs by small stones loosely inserted, and the walls so built have generally a rubble backing about three or four feet thick. As a retaining wall or one which has to sustain a thrust of earth from behind such a system of building is in utter defiance of all the principles of mechanics, because the stones are like wedges placed the wrong way, they have absolutely nothing to keep them in their places, and any thrust from behind must inevitably dislodge them. As a sea wall it may have this advantage that a wave striking the stones from without acts like driving a wedge home, but it possesses this great defect that it does not afford solidity or strength which is the great desideratum in any construction exposed to the force of waves. As a mere veneer on the banks of a canal or river to protect them from the action of the water, it may be efficient enough, but, if no more than this is required, an equally effectual and much cheaper method would be to line them with thin flags or wooden boarding. The Hatobas in Yokohama which have been broken up since they were erected by each heavy gale of wind that has occurred were built in this way. The retaining walls of the creek in Yokohama which were only built a year or two ago and parts of which come down with every heavy rain, were also built in the same way and it is so common and the native quarrymen are so accustomed to cut out those peculiar pyramidal stones that one of them can be bought at nearly one half the

price of a square stone of the same cubical contents. The intention or the advantages of this shape of stone I have never been able to discover, and although I have made enquiries of officials acquainted with the processes of Japanese building in all parts of Japan I have never succeeded in getting a satisfactory reply.

(To be continued.)

## Law & Police.

### H. B. M.'s CONSULAR COURT.

Before Mr. Consul RUSSELL ROBERTSON.

December 23rd and 24th, 1873.

The case against Wm. Alex. Smyth, in the Lighthouse service accused of an indecent assault upon the wife of Kondo Komei, a Japanese Lighthouse-keeper, was again taken up on the 23rd inst., the same counsel appearing for the prosecution and the accused as before.

The wife of Kondo Komei appeared as witness, and gave a lengthy and detailed account of the conduct of accused towards her, when he, in the night of the 5th ultimo, entered her bedroom, while her husband was on duty in the lighthouse. According to her evidence there was no doubt in her mind about the intentions of the accused, which however were frustrated by her cries for help and the timely arrival of another Japanese lighthouse-keeper, who afterwards went and called her husband.

At the close of the examination and after hearing counsel on both sides the case was remanded, and the accused admitted to bail.

## Extracts.

### SCOTCH PREACHERS.

(Saturday Review.)

It is known that the people of Scotland are keenly theological, and very particular as to the quality of the sermons which are preached for their edification. The sermon occupies the chief place in the services, and is regarded as their most attractive and important feature. Indeed, the prayers also are often sermons in disguise. Although formally addressed to the Deity, they are intended for the instruction and entertainment of the congregation; and a well-known Scotch clergyman is said to have added to a quotation from Scripture "For that, O Lord, is the correct translation of the passage." Prayers and sermons equally receive the judicial attention of the audience, both from a literary and doctrinal point of view. The democratic spirit and constitution of the Presbyterian Church probably encourage this sort of popular supervision. It appears to be assumed that anybody who hears a sermon is perfectly capable of sitting in judgment either on its orthodoxy or its literary style; and respect for the Church as an institution is thought to be quite compatible with the utmost freedom of personal criticism in regard to individual ministers. Every preacher is closely watched by his congregation and his Presbytery, and an elaborate machinery of a first court and double appeal is provided, in order to test any charges which may be brought against him. Two ecclesiastical suits which have been going on for some time in Scotland, and have just been decided, illustrate in a striking way some of the peculiarities of this ecclesiastical discipline.

The first of these cases was an objection to the settlement of the Rev. W. Mackersay as minister of a parish called Chapel of Garioch, in the north of Scotland. The grounds of the objection were that Mr. Mackersay's preaching and exposition of Scripture were "cold, dry, shallow, and not well calculated to arouse the attention;" and further, that they were "lifeless, almost destitute of the doctrine of the Gospel, and unintelligible to a large extent." Witnesses were called in support of these charges. The parish schoolmaster, Mr. Selbie, led the way. There was, he said, nothing in Mr. Mackersay's manner "to arrest and fix the eye by a fine, earnest, bold demeanour," "nothing, as it were, to build up in the mind a holy frame." What Mr. Selbie wanted, it appeared, was "burning zeal," and "a warmth beaming from the eye, the face, and, above all, from the intonation of the voice." "You know," he remarked, "what a sleepy preacher does to a sleepy congregation"; upon which some one suggested that "Dr. Kidd threw a book at them." The presented was also said to be undignified in bearing, expression, and carriage—"a good old Saxon word," added the schoolmaster, "for behaviour." The next witness objected to the presentee's hands, which he thought were very much in his way. "At one time they were in his pockets;

then he was keeping the line of the sermon with his finger; and, again he was ficherin' the same as if there had been something annoying him." A farmer thought he was a "cauld, dry, sleepie body," but he may have judged by his own difficulty in keeping awake. Another farmer wanted more "forey" preaching, while a third could not endure the presentee's "silver grey sort of eyelashes." A witness said he did not observe anything objectionable in "presentee's use of body, hands, eyes," but he did not finish his sermons properly. "He proposed several courses, but never followed them, saying he hadn't time or couldn't dwell on them." It was also objected to the presentee that there was no love looming from his eye, and that, in preaching, he did not show "any sympathy in the concern." The presentee preached a sermon about Naaman the Syrian, but a farmer said he saw little meaning in it; "it was just a about wash and and be clean." In support of the charge of unintelligibility, it was urged that the presentee used such puzzling expressions as 'a series of unhappy coincidences' and a concourse of circumstances." If it is true, as alleged, that such expressions are utterly unintelligible to the ordinary hearer in that region, there must surely be something the matter with the parish school, and the presentee might have retorted upon Mr. Selbie, that it was the schoolmaster's fault if the people could not understand him when he spoke English. One of the most frequent objections to the presentee was that he was not "lively," and it was asked whether he was expected to jump about in the pulpit.

Witness were also called on the other side. One thought the presentee's voice very pleasant, and added candidly, "If he didn't edify me, it was my fault, not his." Several said they carried home what the preacher said, though in some cases it turned out upon inquiry that whatever had been carried home had since been lost. A railway labourer said he thought all ministers were very much alike in their preaching, and that the presentee was just like the rest. It was suggested that, if the presentee was not so spirited as he might have been in preaching his first sermons, it was no wonder, seeing "he had a lot of hungry dogs looking down on him, to tak' a bit of him gin they could." Another witness, who took a comprehensive view of the subject, remarked that he was pleased with his preaching, but "there's a handle o' iller things in the parish besides preaching." A great deal of attention was given in the course of this inquiry to the presentee's eye. Some liked it and some did not; others didn't seem to care about it one way or the other. One of the problems for the Presbytery was whether anybody had caught it. A member of the congregation said he had caught the preacher's eye, but he could not say whether the preacher's eye had caught his. Much "intercourse of the eye" appears to be demanded at Chapel of Garioch. Everybody knows the sort of intimate, confidential glance which a clever actress sometimes casts at the audience, giving a vast number of admirers in all parts of the house an impression that the look is expressly intended for each of them in particular. Something of this kind would seem to be wanted at Chapel of Garioch. Each member of the congregation is anxious to suppose that the minister's eye rests on him in an especial manner; and the next presentee would perhaps do well to take a few lessons from Madie Lucca or Miss Nellie Farren. It came out in the evidence that there was reason to suppose that the presentee was objected to, not so much on account of his personal qualities as on other grounds. An Elder had been heard to say that "Mrs. Spratt" (the retiring incumbent's wife) "was owre prood for a minister's wife, but a prooder was coming." And political opposition to Sir J. Elphinstone, the patron, was also hinted at as a motive for rejecting his nominee. Some of the parishioners were offended because they had not been consulted, and thought they ought to assert their independence. The decision of the Presbytery was against the presentee. The mover of the resolution condemning him admitted that his discourses were "rich in religious truth," but then "the different topics treated of were not separated in that marked and unmistakable manner which some hearers need who are unaccustomed to effort in thinking." The seconder observed that no doubt the presentee's manner was refined and cultivated, and his style polished; but, from what he knew of the parish, this was not the manner or the style to suit this particular parish. It would appear, therefore, that the chief grounds upon which the presentee in this case was declared to be unfit for his place were that he did not divide his sermons into heads, and that his style was polished and his manner cultivated and refined. The Presbytery do not seem to have come to a formal decision about his eye. For some time past it has been becoming tolerably clear that Lord Aberdeen's compromise in regard to the law of patronage was practically a surrender of the patron's position. In the present

instance it may be conjectured that the Presbytery pronounced against the presentee simply because they saw that a busy and energetic section of the congregation had made up their minds not to accept "Sir James's man."

The other case to which we referred is one of greater moment. A year or two since Dr. Wallace of Edinburgh wrote an essay on "Church Tendencies in Scotland," in which he said that "the equanimity with which attacks on the standards and contradictions of its doctrines are listened to by the Church, and the leniency with which cases of what is undoubtedly heresy in the eye of the law are dealt with by all the churches," showed that the hold of the orthodox propositions of the Westminster Confession of Faith on the mind of the people had been weakened. He also suggested that a new and living theology might be built up in the mind of the nation by the free action of the Christian intellect on its appropriate objects, and that unless this were attempted—in other words, unless the restrictions of the old standards were got rid of—there would soon be nothing left but an artificial and lifeless orthodoxy fit only for stolid peasants and superstitious women. It must be confessed that this reads very much like a challenge to the Church, especially when taken in conjunction with the sort of sermons which Dr. Wallace was in the habit of preaching. The Presbytery of Edinburgh therefore felt bound to call upon Dr. Wallace for some explanation. The charges against him were that he had used irreverent expressions, as when he ridiculed the idea of praying to a "fidgety God" who did not know His own mind and was always shifting from one course to another, and that he had also spoken in such a way as to raise doubts as to the reality of the resurrection of Christ. It is difficult to see how the Presbytery could avoid taking notice of language which was certainly strange and unusual, and which, from the orthodox point of view, must be considered extremely dangerous.

It would seem, however, that they were by no means anxious to push matters to an extremity, for they have at once accepted Dr. Wallace's assurance that he believes his statements can be reconciled with the law of the Church, and warning him to be more cautious in future, have dropped the subject. Here again the Presbytery were probably aware that it would be awkward to resist the opinions of the congregation, who appeared to be quite satisfied with Dr. Wallace's preaching, and were no doubt prepared to stand by him.

The acquittal of Dr. Wallace may possibly have an unexpected effect on the ecclesiastical unity of the rival Church. Mr. Knight, a Free Church minister at Dundee, has resolved to quit the Church rather than submit to a prosecution for heresy before the Synod, after having been tried and acquitted by the Presbytery. Mr. Knight's congregation are prepared to keep him company in his secession, and it is said that they will endeavour to attach themselves to the Established Church as being more liberal, or at least more latitudinarian.

OCEAN BEDS.—An Associated Press despatch, from Washington, reports that the United States steamer *Tuscarora*, which is now engaged in searching for a suitable berth for a Trans-Pacific cable from San Francisco to Japan, *via* the Aleutian Islands, has been fitted by the Navy Department, under special instructions from the Bureau of Navigation, with a number of appliances for sounding in deep water, including the machine and dynamometer invented by Sir William Thomson, for the use of piano wire, which has already been successfully tried about 40 miles outside of San Francisco, in depths ranging from 151 to 1,949 fathoms. Besides, Commander G. E. Belknap has made an improvement of the apparatus hitherto thought best adapted for bringing up specimens of bottom, of which he has sent a model to the Bureau of Navigation which is much admired by all officers who have seen it. Belknap's improvement in the Brookes' self-detaching shot and apparatus for bringing-up particles of bottom in quills consists of two cylinders arranged one above the other when the instrument is set, and descending through the water, and to close telescopically when the shot detaches on reaching the bottom. The lower cylinder is fitted with a conical cup at its lower extremity for the reception of parts of the bottom through an aperture which, while descending, admits a flow of water upward through the cylinders by means of valves which close hermetically by the pressure of the water when the apparatus is being hauled up. The upper cylinder covers the aperture in the lower one on detaching the shot, so that the water cannot wash out the bottom caught in the conical cup. Thus Commander Belknap has discovered a practical and unfailing method of not only bringing up safely a larger amount of bottom from the ocean bed than has hitherto been brought up, but also as much water as is caught between the two valves in the lower cylinder at the moment of striking the bottom.

## ARRIVALS.

Dec. 22, *Vanguard*, British barque, Luckes, 645, from London via Shanghai, December 9th, General, to Jardine, Matheson & Co.  
 Dec. 22, *Avoca*, British steamer, Andrews, 1,185, from Hongkong, Mails and General, to P. & O. Co.  
 Dec. 24, *Relief*, American steamer, Corning, 795, from Hakodate, December 21st, General, to P. M. S. S. Co.  
 Dec. 25, *Fiery Cross*, British ship, Bates, 694, from London, July 26th, General, to Van Oordt & Co.

## DEPARTURES.

Dec. 23, *Nil*, French steamer, Samat, 1,008, for Hongkong, Mails and General, despatched by M. M. Co.  
 Dec. 23, *Golden Age*, American steamer, Coy, 1,870, for Hakodate, General, despatched by P. M. S. S. Co.  
 Dec. 24, *Colorado*, American steamer, Dearborn, 3,836, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
 Dec. 24, *Gaucha*, British barque, Hawkins, 869, for Hiogo, General, despatched by E. C. Kirby & Co.  
 Dec. 24, *Oregonian*, American steamer, Harris, 1,914, for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
 Dec. 26, *Tartar*, British steamer, Ferries, 1,458, for Hongkong, General, despatched by Aug. Heard & Co.

## PASSENGERS.

Per British steamer *Avoca* from Hongkong.—Mr. F. Escombe, Mrs. Shervinton, Dr. Rein, Major Snow, and 15 Chinese.  
 Per American steamer *Relief* from Hakodate.—6 Japanese in the steerage.  
 Per M. M. Co.'s *Nil*, for Hongkong.—Messrs. Anton Albers, De Villeneuve, G. Gabriel, Blouet Jules, and Leo.  
 Per P. M. S. S. *Colorado*, for San Francisco.—Messrs. Geo. Reimemyder, H. B. Lemann, Clark, J. de Cordova, Fred. Jenkins, A. Huber, Capt. Geo. Johnson and family, Capt. Seth Doane, H. Rubery, and Lin.  
 Per French steamer *Nil*, for Hongkong, on the 23rd instant.—Messrs. Gourrier, Canet, Ch. Villeneuve, Arton, Albue, and Leo.

## CARGOES.

Per M. M. *Nil*, for Hongkong :—  
 Silk..... 360 bales:

## REPORTS.

The British barque *Vanguard* reports fine weather during the passage.  
 The American steamer *Relief* reports strong westerly winds and clear weather.  
 The British ship *Fiery Cross* reports; leaving London July 26th and the Downs on the 28th; met with strong westerly gales down Channel and across the Bay of Biscay, and after entering the N. E. trades found them very light; crossed the Equator August 31st, in 24° W., the S. E. trades were strong but hanging well to the southward. Rounded the Cape September 24th, and met with strong northerly winds, running the lasting down. Off the Cape spoke a Dutch barque the *Britius*, Amsterdam to Batavia, 70 days out. Made the passage round Australia sighting Norfolk Island, Hunter Island and the Ladroneas. While near the latter a typhoon passed the vessel and experienced some dif-

ficulty in keeping clear of the land having been hove to for 48 hours. The Captain states that from the Volcanic Island of Assumption a great eruption had taken place very recently, immense quantities of fresh lava being seen, down to the water edge, he says the crater is about 3,000 feet high. In the Pacific had strong N. E. winds most of the time the vessel taking on board considerable quantities of water, had to batten down the skylights. November 20th, spoke the British ship *Perth*, from Hunters River to Singapore. Lat. 2 deg. 50 N.; Long. 165 deg. 50 E. Took a pilot on board on the 24th, and anchored here on the morning of the 25th, 150 days from London.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, DECEMBER 27<sup>TH</sup>, 1873.

In the course of the present week the following Mails have arrived :—On the 22nd instant, the P. & O. steamer *Araca* from Hongkong.

The Mail departures are as follows :—On the 23rd instant the M.M. steamer *Nil* for Hongkong; on the 24th instant the P.M.S.S. *Colorado* for San Francisco.

The *Nil* took hence 360 bales of Silk.

**Cotton Fabrics.**—As fully anticipated, the natives show very little disposition to operate at the moment, and the transactions that have occurred during the interval have been of the most meagre character.

**Shirtings.**—8½ lbs. again form the prominent feature of the week, and one or two fairly large sales to arrive are reported, at lower rates; the aggregate for the period however does not exceed 15,000 pieces of all weights.

**Yarns.**—Shew no alteration, the sales reported embracing but 200 Bales.

**Woollen Materials.**—Do not attract any attention, and again our quotations must be treated as purely nominal.

**Iron and Metals.**—Nail Rods, the Settlements of the week, that have come to our notice freely bear out our previous remarks under this head, and a decided depreciation of the values, has been occasioned by pressing sales of shipments to arrive. The quantity here and to arrive of suitable sizes is not excessive so far as we can learn, and we may fairly anticipate prices to recover. In Flat Round and Pig we do not bear of any transactions.

**Sugar.**—No business is reported during the past week. An enquiry for Formosa still exists and higher prices have been offered, but it has not led to any transactions, holders showing no disposition to sell. We quote Baskets at \$4.10 to \$4.15; Bags at \$4.20 to \$4.30.

## COMMERCIAL INTELLIGENCE.

(Continued.)

(From the Japan Mail of the 24th instant, since which no alterations have been reported.)

**Silk.**—In spite of the most conflicting advices received from the English and Continental markets the demand has continued active and settlements since the 8th instant amount to 750 bales of Hanks, and 150 of Oshius.

Concessions to the extent of \$10 to \$20 have been occasionally obtained for Common and superior Hanks; but on the whole prices have been well maintained and close firm at previous quotations.

The stock is estimated at 1,600 bales.

**Silk-worms' Eggs.**—This season which has been protracted to an unusually late time may now be considered as closed.

The Export has been as follows:—By French mails 4,695 cases, by English mails 1,497 cases, by American mails via San Francisco and New York to date 587 cases—Total 6,779 cases.

The gross weight of 100 cards including packing materials varies according to the system of packing adopted by shippers from lbs. 20<sup>100</sup> to 25<sup>100</sup>, and the average weight is lbs. 22<sup>100</sup>.

The total gross weight of the shipments to date is 324,027 lbs. giving an export of 1,410,000 cards and a quantity of 211 cards per case. The returns of the Custom house show a total figure of 1,383,000 cards which, due allowance being made for a few inaccurate declarations, may be taken as too low.

Last San Francisco steamer took about 100 cases (65 being already engaged) giving an additional figure of about 20,000 cards.

In conclusion we should say that this year's export is 1,425,000 cards against 1,260,000 last year.

Taking as a basis the returns of the Custom House we classify the Export as follows:—

	1873.	1872.
Sinchiu ... ..	606,000	618,000
Oshiu ... ..	290,000	296,000
Joshiu ... ..	150,000	128,000
Bushiu ... ..	147,000	87,000
Koshiu ... ..	96,000	73,000
Other sorts ... ..	136,000	80,000
Total ... ..	1,425,000	1,280,000.

According to Government Regulations the cards intended for export were marked with a green stamp, those intended for home use with a brown stamp. Of the latter the quantity smuggled from the interior into Yokohama may be estimated at 130,000 or 150,000 cards; this quantity is included in the general export as given above.

**Tea.**—Business has been animated and prices have decidedly strengthened, while arrivals have been very moderate and stocks are light.

Besides the *J. S. Stone* it is not improbable that another vessel will obtain a cargo for New York if laid on. The settlements have been in

**ROWLAND'S  
R. ODONTO 2/9**

WHITENS, PRESERVES, AND BEAUTIFIES THE  
TEETH, PREVENTING THEIR DECAY.

ASK ANY CHEMIST OR PERFUMER

**FOR ROWLAND'S ODONTO.  
AND TAKE NO OTHER.**

**ROWLANDS' MACASSAR OIL**

is the best and safest Restorer and Beautifier of the Human Hair. It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandruff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 6d., 7s., 10s. 6d., equal to 4 small, and 21s. per bottle. **CAUTION**—Each bottle has a glass stopper instead of the cork as formerly. All with the cork are spurious imitations. ROWLANDS' ODONTO, or Pearl Dentifrice, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipient decay, and polishes and preserves the enamel, to which it imparts a PEARL-LIKE WHITENESS. Price 2s. 6d. per box. ROWLANDS' KALYDOR realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling, and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle. ROWLANDS' ESSENCE OF TYRE never fails to produce immediately perfect change in Red or Grey Hair, Whiskers Eyebrows, &c., to a beautiful glossy and permanent Brown or Black, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle. Sold by all Chemists, Perfumers, and Bazaars throughout China and Japan. "Ask for ROWLANDS' ARTICLES," A ROWLAND & SONS, 20, Hatton Garden, London.

### KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

### KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all Chemists.

**CAUTION.**— The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

THOMAS KEATING, London  
EXPORT CHEMIST AND DRUGGIST.  
Indents for pure Drugs and Chemicals  
carefully executed.  
Yokohama, August 9, 1873.

### THE GREATEST WONDER OF MODERN TIMES!

### HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

### THE GREAT CURE ALL! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kind. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

### THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.
